

C O N T E N T S

Introduction	1	Local menus	22
Hardware and software requirements	1	History lessons	23
A note on terminology	2	Automatic name completion	24
What's in the manual	3	Incremental matching	25
How to contact Borland	5	Making macros	25
Chapter 1 Getting started	7	Window shopping	25
The distribution disks	8	Windows from the View menu	26
The README file	8	Module window	26
The HELPME!.DOC file	8	Watches window	26
Turbo Debugger utilities	9	Breakpoints window	26
Installing Turbo Debugger	10	Stack window	27
Unzipping example files	10	Log window	27
LCD and B/W monitors	11	Variables window	27
Hardware debugging	11	File window	27
Where to now?	11	CPU window	28
Programmers learning a Turbo		Dump window	28
language	12	Registers window	28
Programmers already using a Turbo		Numeric Processor window	29
language	12	Execution History window	29
Chapter 2 Debugging and Turbo		Hierarchy window	29
Debugger	13	Duplicate windows	30
What is debugging?	13	User screen	30
Is there a bug?	14	Inspector windows	30
Where is it?	14	The active window	31
What is it?	14	What's in a window	31
Fixing it	14	Working with windows	33
What Turbo Debugger can do for you	15	Window hopping	33
What Turbo Debugger won't do	16	Moving and resizing windows	34
How Turbo Debugger does it	17	Closing and recovering windows	35
The Turbo Debugger advantage	17	Saving your window layout	36
Menus and dialog boxes	18	Getting help	36
Using the menus	18	Online help	37
Dialog boxes	20	The status line	38
Knowing where you're at	21	In a window	38
		In a menu or dialog box	39

Chapter 3 A quick example	41	The Macros menu	70
The demo programs	41	Create	70
Using Turbo Debugger	43	Stop Recording	70
The menus	43	Remove	70
The status line	43	Delete All	70
The windows	44	Display Options command	70
Using the C demo program	45	Display Swapping	71
Setting breakpoints	47	Integer Format	72
Using watches	48	Screen Lines	72
Examining simple C data objects	48	Tab Size	72
Examining compound C data objects	50	Path for Source command	72
Changing C data values	50	Save Options command	72
Using the Pascal sample program	52	Restore Options command	73
Setting breakpoints	53	Running DOS in Turbo Debugger	73
Using watches	54	Returning to DOS	74
Examining simple Pascal data objects	55	Chapter 5 Controlling program execution	75
Examining compound Pascal data objects	57	Examining the current program state	76
Changing Pascal data values	57	The Variables window	76
Chapter 4 Starting Turbo Debugger	61	The Global pane local menu	77
Preparing programs for debugging	61	Inspect	77
Preparing Turbo C programs	62	Change	78
Preparing Turbo Pascal programs	62	The Static pane local menu	78
Preparing Turbo Assembler programs	63	Inspect	78
Preparing Microsoft programs	63	Change	78
Running Turbo Debugger	63	The Stack window	79
Command-line options	64	The Stack window local menu	79
Loading the configuration file (-c)	64	Inspect	79
Display updating (-d)	65	Locals	79
Getting help (-h and -?)	65	The Origin local menu command	80
Process ID switching (-i)	65	The Get Info command	80
Keystroke recording (-k)	65	The Run menu	82
Assembler-mode startup (-l)	66	Run	83
Setting heap size (-m)	66	Go to Cursor	83
Mouse support (-p)	66	Trace Into	83
Remote debugging (-r)	67	Step Over	83
Source code handling (-s)	67	Execute To...	84
Video hardware (-v)	68	Until Return	84
Overlay pool size (-y)	68	Animate...	85
Configuration files	69	Back Trace	85
The Options menu	69	Instruction Trace	85
The Language command	69	Arguments...	85
		Program Reset	86

Chapter 9 Expressions 137

Choosing the language for expression evaluation	138
Code addresses, data addresses, and line numbers	139
Accessing symbols outside the current scope	139
Scope override syntax	140
Implied scope for expression evaluation	142
Byte lists	143

C expressions	143
C symbols	143
C register pseudovariables	144
C constants and number formats	145
Escape sequences	145
C operators precedence	146
Executing C functions in your program	147
C expressions with side effects	148
C reserved words and type conversion	148
Pascal expressions	149
Pascal symbols	149
Pascal constants and number formats	149
Pascal strings	150
Pascal operators and operator precedence	150
Calling Pascal functions and procedures	151
Assembler expressions	151
Assembler symbols	151
Assembler constants	152
Assembler operators	152
Format control	153

Chapter 10 C++ and object-oriented Pascal debugging 155

Window movement commands	207
Wildcard search templates	208
Complete menu tree	208
Chapter 14 How to debug a program	211
When things don't work	211
Debugging style	212
Run the whole thing	213
Incremental testing	213
Types of bugs	213
General bugs	214
Hidden effects	214
Assuming initialized data	214
Not cleaning up	214
Fencepost errors	215
C-specific bugs	215
Using uninitialized autovariables ..	215
Confusing = and ==	216
Confusing operator precedence	216

Bad pointer arithmetic	216	Converting incorrectly from byte to word operations	229
Unexpected sign extension	217	Using multiple prefixes	229
Unexpected truncation	217	Relying on the operand(s) to a string instruction	229
Misplaced semicolons	217	Wiping out a register with multiplication	229
Macros with side effects	218	Forgetting that string instructions alter several registers	230
Repeated autovisible names	218	Expecting certain instructions to alter the carry flag	230
Misuse of autovisibles	218	Waiting too long to use flags	230
Undefined function return value ...	218	Confusing memory and immediate operands	230
Misuse of break keyword	219	Causing segment wraparound	230
Code has no effect	219	Failing to preserve everything in an interrupt handler	230
Pascal-specific bugs	219	Forgetting group overrides in operands and data tables	231
Uninitialized variables	220	Accuracy testing	231
Dangling pointers	220	Testing boundary conditions	231
Scope confusion	221	Invalid data input	231
Superfluous semicolons	222	Empty data input	232
Undefined function return value ...	223	Debugging as part of program design ..	232
Decrementing Word or Byte variables	224	The sample debugging session	232
Ignoring boundary or special cases .	224	C debugging session	233
Range errors	225	Looking for errors	233
Assembler-specific bugs	226	Deciding your plan of attack	234
Forgetting to return to DOS	226	Starting Turbo Debugger	234
Forgetting a RET instruction	226	Inspecting	235
Generating the wrong type of return	227	Breakpoints	235
Reversing operands	227	The Watches window	236
Forgetting the stack or reserving a too- small stack	227	The Evaluate/Modify dialog box	236
Calling a subroutine that wipes out registers	227	Eureka!	236
Using the wrong sense for a conditional jump	228	Pascal debugging session	238
Forgetting about REP string overrun	228	Looking for errors	238
Relying on a zero CX to cover a whole segment	228	Deciding your plan of attack	239
Using incorrect direction flag settings	228	Starting Turbo Debugger	240
Using the wrong sense for a repeated string comparison	229	Moving through the program	240
Forgetting about string segment defaults	229	The Evaluate/Modify dialog box	241
		Inspecting	242
		Watches	243
		Just one more bug...	244

Chapter 15 Virtual debugging on the 80386 processor	247	Memory consumption	272
Equipment required for virtual debugging	248	EMS support	272
Installing the virtual debugger device driver	248	Interrupt vector saving and restoring	273
Starting the virtual debugger	248	Appendix C Inline assembler keywords	275
Differences between normal and virtual debugging	250	Appendix D Customizing Turbo Debugger	279
TD386 error messages	251	Running TDINST	280
TDH386.SYS error messages	252	Setting the screen colors	280
Chapter 16 Protected-mode debugging with TD286	253	Customizing screen colors	280
Equipment required for the protected-mode debugger	253	Windows	280
Installing the protected-mode debugger	254	Dialog boxes	281
Starting the protected-mode debugger	254	Menus	282
Differences between Turbo Debugger and protected-mode	254	Screen	282
Running TD286 on different machines	255	The default colors	282
Chapter 17 Debugging TSRs and device drivers	257	Setting Turbo Debugger display parameters	283
What's a TSR?	257	Display Swapping	283
Debugging a TSR	258	Integer Format	284
What's a device driver?	261	Beginning Display	284
Debugging a device driver	263	Screen Lines	284
Terminating the debugging session	265	Tab Size	284
Appendix A Summary of command-line options	267	Maximum Tiled Watch	284
Appendix B Technical notes	269	Fast Screen Update	285
Changed load address and free memory	269	Permit 43/50 Lines	285
Crashing the system	270	Full Graphics Saving	285
Tracing through DOS and process ID switching	270	User Screen Updating	285
Using the 8087/80287 math coprocessor and emulator	270	Log List Length	286
Interrupts used by Turbo Debugger	271	Turbo Debugger options	286
Debugging using INT 3 and INT 1	271	Directories...	286
Display-saving and mode-switching	272	Input and Prompting	287
		History List Length	287
		Interrupt Key	287
		Set Key	287
		Mouse Enabled	287
		Beep on Error	287
		Keystroke Recording	288
		Control Key Shortcuts	288
		Source Debugging...	288
		Language	288
		Ignore Symbol Case	289
		Miscellaneous Options...	289

NMI Intercept	289	Getting it all to work	302
Use Expanded Memory	289	Appendix F Dialog boxes and error messages	303
Change Process ID	289	Dialog boxes	303
DOS Shell Swap Size	290	Error messages	310
Spare Symbol Memory	290	Fatal errors	310
Remote Debugging	290	Other error messages	311
Remote Link Port	290	Information messages	328
Link Speed	290	Appendix G Using Turbo Debugger with different languages	329
Setting the mode for display	290	Turbo C tips	329
Default	290	Compiler code optimizing	329
Color	290	Accessing pointer data	330
Black and White	291	Stepping through complex expressions	330
Monochrome	291	Turbo Assembler tips	331
LCD	291	Looking at raw hex data	331
Command-line options and installation equivalents	291	Source-level debugging	331
When you're through...	293	Examining and changing registers	331
Saving changes	293	Turbo Pascal tips	332
Save Configuration File	293	Stepping through initialization code	332
Modify TD.EXE	293	Stepping through exit procedures	332
Exiting TDINST	294	Constants	332
Appendix E Remote debugging	295	String and set temporaries on the stack	333
Setting up a remote debugging system	296	Clever typecasting	333
Remote software installation	296	CPU window tips for Pascal	334
Starting the remote link	297	Glossary	335
Starting Turbo Debugger on the remote link	297	Index	341
About loading the program to the remote system	298		
TDREMOTE command-line options	298		
Remote debugging sessions	299		
TDREMOTE messages	300
