Appendix A Turbo Assembler syntax summary

Lexical grammar	151
MASM mode expression grammar	154
Ideal mode expression grammar	156

Appendix B Compatibility issues	159
One- versus two-pass assembly	160
Environment variables	160
Microsoft binary floating-point format	160
Turbo Assembler Quirks mode	161
Byte move to/from segment register	161
Erroneous near jump to far label or procedure	161
Loss of type information with = and EQU directive	162
Segment-alignment checking	162
Signed immediate arithmetic and logical instructions	163
Masm 5.1 features	163
Masm 5.1/Quirks mode features	164
QUIRKS	164
MASM51	165
MASM51 and QUIRKS	165
QASM compatibility	165

Appendix C Turbo Assembler highlights

Extended command-line syntax	167
GLOBAL directive	167
PUBLICDLL directive	168
COMM directive extension	168
Local symbols	168
Conditional jump extension	168
Ideal mode	168
UNION directive/STRUC nesting	168
EMUL and NOEMUL directives	169
Explicit segment overrides	169
Constant segments	169
Extended CALL instruction	169
Extended PUSH and POP instructions	169
Language-specific extensions	170
Extended LOOP instruction in 386 mode	170
Extended listing controls	171
Alternate directives	171
Predefined variables	171
Masm 5.0 and 5.1 enhancements	171
Improved SHL and SHR handling	172

Multi-pass capability	172	TLIB: The Turbo Librarian	206
Appendix D Utilities	173	The advantages of using object module libraries	206
MAKE: The program manager	173	The components of a TLIB command line	207
How MAKE works	174	The operation list	208
Starting MAKE	175	File and module names	208
The BUILTINS.MAK file	175	TLIB operations	208
Command-line options	176	Using response files	209
A simple use of MAKE	177	Creating an extended dictionary: The /E option	210
Creating makefiles	180	Setting the page size: The /P option ..	210
Components of a makefile	180	Advanced operation: The /C option ..	211
Comments	181	Examples	211
Command lists	181	Turbo Link	212
Prefixes	182	Invoking TLINK	212
Command body	182	Using response files	214
Batching programs	183	TLINK options	215
Executing DOS commands	185	/x, /m, /s options	215
Explicit rules	186	/l (line numbers)	217
Special considerations	187	/i (uninitialized trailing segments) .	217
Examples	187	/n (ignore default libraries)	217
Automatic dependency checking	188	/c (case sensitivity)	217
Implicit rules	189	/d (duplicate symbols)	217
Macros	191	/e (extended dictionary)	218
Defining macros	192	/t (tiny model .COM file)	218
Using macros	192	/v option	218
Special considerations	193	/3 (80386 32-bit code)	219
Predefined macros	193	Restrictions	219
File name macros	194	Error messages	219
Directives	196	Fatal errors	220
Dot directives	196	Nonfatal errors	223
.PATH.extension	197	Warnings	224
File-inclusion directive	197	TOUCH	225
Conditional execution directives ...	198	Appendix E Error messages	227
Expressions allowed in conditional directives	199	Information messages	227
Error directive	201	Warning and error messages	228
Macro undefinition directive	201	Fatal error messages	252
MAKE error messages	201	Index	257
Fatal error messages	202		
Errors	203
