

Beginning Visual Basic 5

Introduction

Who's This Book for?	1
What's Covered in This Book?	1
What's Not Covered in This Book	2
What You Need to Use This Book	2
Conventions	3
How to Get the Most Out of This Book	4
Tell Us What You Think	5
Customer Support	5

Chapter 1: Welcome to Visual Basic

A Quick Tour of Visual Basic	7
The Opening Visual Basic Screen	8
Visual Basic Menus	10
The Toolbar	11
Forms	13
Visual Basic Program Code	14
Controls and the Toolbox	16
Adding Controls Adds Power	17
The Project Explorer	18
The Project VBP File	20
Running Your Programs	20
Saving Your Work	23
Saving Your Project	23
Ready-Made Projects	25
Looking at What the Wizard Has Done	32
Working with Individual Project Files	34
Printing out a Project	36
Getting Help	37
Context-Sensitive Help	37
Searching for Help	38
Books Online	39
Summary	40

Chapter 2: Inside a Visual Basic Program	43
Objects and Events	44
Event-Driven Programming	44
A New Way of Thinking	44
Object-Oriented Programming	45
Properties	46
The Properties Window	46
Programming Using Properties	48
Changing Properties Interactively	50
Where Code Fits in Visual Basic	51
Event Handlers	51
Your First Visual Basic Event Handler	51
Typing In Code	58
Time To Say Goodbye	59
Making an Executable File	61
Interpreted vs. Compiled Code	61
Pseudocompiled Languages	62
Changing the Program Icon	65
The Setup Wizard	66
Summary	66
 Chapter 3: Common Controls	 69
Working with Controls	69
The Toolbox	70
Placing Controls on to Your Form	70
Resizing Controls	72
The Alignment Grid	73
Control Locking	74
What is a Control?	74
Controls are Windows	74
Properties and Events	75
Command Buttons	76
Events	76
Properties	76
Returning to the Property Market	78
The Name Property	78
Standard Names	78
Caption and Text Properties	79
The Caption Property	79
The Text Property	80
Shortcut Keys	80
Text Boxes	80
Text Box Properties	83
Checking User Input	85
Text Box Events	85
Checking for an Empty Text Box	89
Label Control	90

Label Properties	90
Label Events	90
Check Boxes	91
Check Box Events	92
The Check Box Value Property	93
Option Buttons	94
Picture Boxes and Image Controls	95
Using the Picture and Image Controls	95
Image File Formats	96
Picture and Image Controls Compared	97
More Common Properties	97
The Enabled Property	97
Setting Properties at Run Time	97
Disabling Controls	98
Enabling Different Controls	98
The Visible Property	100
Focus	100
The TabIndex Property	100
Using Focus at Run Time	100
For My Last Trick...Ole!	102
So What, Really, is OLE?	105
Summary	105

Chapter 4: Writing Code 109

Writing Code in Visual Basic	109
Putting Code into Modules	110
Functions and Subprocedures	110
The Big Picture	111
Where's the Form?	114
Running an Application that has Forms and Modules	117
Doing it in Public or in Private?	118
Making Choices in Programs	118
Decision-Making	119
Branching	120
Decision-Making	121
Testing for Conditions with If...Then	121
Defining the Conditions You Want to Test	125
Testing Multiple Conditions	126
Multiline If Statements	127
Multiline If...Else Statements	127
Multiple Alternatives Using Elseif	127
Getting Selective	132
The Select Case Statement	132
Selecting Options Based on Different Conditions	134
Selecting Strings	135
For My Next Trick - Loops	135
How Index Variables Control For Loops	137
Controlling the Index Variable	138

Leaving a For Loop	138
An Aside on Naming Your Index Variables	138
Showing a Form as it Loads	139
The Do Loop	139
Do...Loop While	140
Do...Loop Until	142
Where to Test in the Loop	143
The While...Wend Loop	144
Jumping Around With Goto	144
The History of the Crime	144
When to Use Goto	145
Jumping to a Label	145
Summary	146

Chapter 5: Making Data Work For You **149**

Data and Visual Basic	149
Using Variables	150
Declaring Variables	151
Choosing the Explicit Declaration Option	151
Constants	152
Types of Data in Visual Basic	153
A Variable for all Seasons - The Variant	153
When to Use Variants	157
Checking the Contents of a Variant	157
Numbers in Visual Basic	160
Integers and Longs	160
More Precise Numeric Types	160
Declaring Numeric Variables	161
Working with Numbers	161
Using Scrollbars to Input Numbers	162
When to Use Scrollbars	162
String Variables	166
Declaring Strings	166
Use Quotation Marks for Text	167
Explicit Declaration Prevents Bugs	167
Working with Strings	168
Changing Case	170
Searching Strings	171
The Len Function	175
The Mid\$ Function	175
The Date and Time Data Type	176
Breaking Now Down into Parts	178
Converting To and From Date Variants	180
Working with Variant Dates	181
The Null and Empty Values	182
Collections of Data	182
Type Declarations	182

Arrays of Data	183
Re-Dimensioning Arrays	184
Preserving Array Data	187
Multidimensional Arrays	187
Using For Each...Next	187
Variable Scope	189
Using Variable Scope	190
Local or Private Variables	191
Module Level Variables	192
Static Variables	193
Global or Public Variables	193
Which Type of Variable Should I Use?	194
Variable Scope Quick Reference	194
Summary	195

Chapter 6: Using List Controls **197**

What's on the Menu	197
Using Visual Basic List Boxes	198
Sorting Items in a List Box	201
Selecting Items in a List Box	202
Detecting When the User Makes a Selection.	202
Identifying Specific Entries in the List	204
Removing Items from a List Box	204
<i>Selecting Multiple Entries</i>	207
The MultiSelect Property	207
Displaying Multiple Columns of Entries	211
Using Visual Basic Combo Boxes	212
Combo Box Events and Properties	215
Clicking and Changing	215
Dropping Down the List	215
Retrieving the Text	215
Setting the Selection	216
Mouse and Key Detection in List Boxes	216
Introducing Bitwise, or Binary Arithmetic	219
Reacting to Mice and Keys	220
No Mouse Events in Combo Boxes	221
Summary	221

Chapter 7: Creating Your Own Objects **225**

OOP!	225
Objects in Visual Basic	226
Creating Your Own Objects	228
Class Modules	229
Class Properties and Methods	230
Designing Classes	231
Public Properties and Variables	237
Understanding the Class Module	242
Protecting Your Properties	244
Read-Only Properties	244

Bringing the Class to Life	244
Optional Parameters	247
A Cautionary Note	250
Using Events	251
Summary	257

Chapter 8: Debugging and Good Design 261

Writing Programs that Work	261
Designing Safe Programs	261
Designing Efficient Programs	262
Planning for the Unpredictable	263
Making Your Code Work	263
Write Understandable Code	264
Passing Parameters to Subroutines and Functions	265
Passing Parameters By Reference	265
Passing By Value Reduces Bugs	268
Building a Procedure Library	268
Handling Errors at Run Time	269
The Err Object	269
The On Error Command	270
Using Error Handling Effectively	271
Adding Error Handling to Your Apps	272
Debugging - Kill All Known Bugs Dead!	272
Visual Basic Debugging Tools	272
Helping You Write Code	273
Providing Code Hints	276
Debugging at Run Time	278
The Immediate Window	278
Watches	281
Using the Variable Value Tooltips	287
The Step Options	287
Controlling the Step Order	288
Breakpoints	289
The Locals Window	290
Summary	292

Chapter 9: Working With Menus 295

You Already Know Menus	295
A Great Windows Menu	295
Drop-Down Menus	296
How Drop-Down Menus Work	297
Creating Menus Using Menu Editor	297
The Visual Basic Menu Editor	297
Nested Menus and Menu Items	305
Menu Properties	307
Menu Name Properties	308
The Menu Index Property	309

Enabling Menu Items	309
Assigning Shortcut Keys	310
Menu Separators	313
Adding Code to Menu Items	315
Pop-Up Menus	316
What's a Pop-Up Menu?	316
Dynamic Menus	321
Adding Menu Items at Run Time	322
A Quick Look at Control Arrays	322
A Note on Good Design	325
Summary	325

Chapter 10: Dialogs

329

Introducing Dialog Boxes	329
Message Boxes	330
Input Boxes	330
Common Dialogs	330
Custom Dialogs	331
When to Use Dialog Boxes	331
Message Boxes	332
The Components of a Message Box	332
Message Length in Message Boxes	334
Selecting the MsgBox Type	335
Message Box Button Options	335
Message Box Icon Options	335
Building the MsgBox Parameter	336
MsgBox as a Function	336
Modality	338
Input Boxes	339
When to Use Input Boxes	339
Positioning Your Input Box	341
Data Types and Input Boxes	341
Common Dialogs	342
Using Common Dialogs	342
The Open and Save File Dialogs	344
Setting Up the Open File Dialog	347
Setting Properties at Design Time	347
Setting Properties from Code	348
Selecting the Correct Files	349
Naming the Dialog	350
Selecting and Launching the Dialog	350
Error Handling with Common Dialogs	350
The Color Dialog	351
Properties of the Color Dialog	351
Invoking the Color Dialog in Your Code	352
The Font Dialog	355
Properties of the Font Dialog	356
The Print Dialog	359

Properties of the Print Dialog	359
Common Dialog Flags	360
Custom Dialogs	361
Writing Your Own Word Processor	366
File Handling	366
Opening Sequential Files	367
Input from the File	368
Writing Data to a File	368
Closing it all Down	369
Summary	374

Chapter 11: Graphics

377

What You Need to Know About Graphics	377
Printing on the Screen	378
Introducing AutoRedraw	380
Printing Fonts	381
Specifying Screen Colors	382
The QBColor Function	383
Hexadecimal Notation	384
Why Put This Hex on Me?	385
The RGB Function	385
Color Mapping	388
Using the Intrinsic Color Constants	388
Coordinate Systems	390
Twips, Pixels, Inches and Centimeters	392
Using Graphics	393
Image and Picture Boxes	393
Loading Graphics at Design Time	394
Loading Images at Run Time	396
Finding Your Images at Run Time	397
Comparing Image and Picture Controls	397
Picture Boxes as Containers	398
The Shape Control	401
The Line Control	402
The Graphics Methods	403
Yes, But is it Art?	403
Pixel Plotting with Pset	406
Drawing Lines	408
Circles, Curves, Arcs and Bendy Bits	412
Drawing Arcs	414
Drawing Ellipses	416
Drawing Properties - Weird and Wonderful Effects	418
The FillStyle Property	418
The DrawWidth Property	418
The DrawStyle Property	418
The DrawMode Property	419
XOR Mode	419
Repainting Forms Efficiently	420

ClipControls	420
AutoRedraw	421
Summary	421

Chapter 12: Using Database Controls 425

What is a Database?	425
A Living Database	426
Getting Information Out of a Real Database	426
Flat-File vs. Relational Databases	427
What the Database Engine Does	427
The Important Jargon	428
Recordsets	429
Databases and Visual Basic	429
Building Visual Basic Databases	430
How This Section Is Organized	430
Using the Data Control	431
The Data Control Itself	431
Bound Controls	432
The BIBLIO.MDB Database	433
Connecting the Data Control to a Data Source	435
Choosing Tables from the Database	437
Using Bound Controls	438
Locking Bound Controls	441
Selecting the Data You Want	442
What Is SQL?	442
The SELECT Statement	443
Taking Data from Multiple Tables	448
Selecting from Multiple Tables	449
Using VisData	451
Introducing VisData	452
Delving Deeper in VisData	454
Summary	457

Chapter 13: Programming Database Access 461

Programming the Data Control	461
The Recordset Object	462
Types of Recordset	462
Table, Type vbRSTypeTable	462
Dynaset, Type vbRSTypeDynaset	463
Snapshot, Type vbRSTypeSnapshot	463
Defining the Recordset	465
Recordset Objects, Properties and Methods	470
Recordset Properties	471
Recordset Methods	472
Using the Move Methods	473
Finding Records	476

Creating and Editing Records	478
Bound List and Combo Controls	478
Working with Records in Code	493
Data Surfing	494
The Database to Data Connection	498
The Validate Event	498
How Bound Controls Work	498
Using the Validate Event to Prevent Changes to Data	499
The Action Parameter	502
The Save Parameter	502
The Update Methods	503
Update	503
UpdateRecord	503
UpdateControls	503
The Limits of the Data Control	504
Summary	510
Chapter 14: Object Variables	513
Visual Basic and Objects	513
Introducing Object Variables	514
Controls as Object Variables	515
Creating Controls at Run Time	515
Control Array Events	519
Managing Controls as Object Variables	521
A Text Box Validation Routine	521
Declaring Object Variables	526
Types of Object Variables	526
Explicit vs. Implicit Declaration	527
The Controls Collection	530
The Controls Property	531
Identifying Controls on the Form	532
MDI Applications	536
MDI Forms With Visual Basic	538
Child Forms	539
Instances of Forms	541
Addressing Your New Form or Talking to Me	544
Creating Window List Menus	544
Arranging Your Desktop	546
Different Window Arrangements	547
Summary	548
Chapter 15: Using DLLs and The Windows API	551
How VB and Windows Fit Together	551
DLLs the Easy Way - The Common Dialog	552
Dynamic Link Libraries	553
What is 'Linking'?	553

Static Linking	553
Dynamic Linking	553
The Visual Basic DLLs	554
The Advantages of Dynamic Linking	554
Consistency	554
Maintenance	554
Smaller Executables	554
The Windows Architecture	555
The Windows API	555
API Wrappers and Custom Controls	555
Finding and Using API Calls	556
The Text API Viewer	556
Some Windows DLLs	557
Calling API Routines	558
A Quick Look at Declaring an API Call	558
Windows' Handles	561
Declaring Parameter Types	562
Using Classes with the API	563
Using the Multimedia Class	563
Understanding the Multimedia Class	572
The Multimedia Control Interface	572
Using mciSendString	573
Callback Functions in Visual Basic	574
Opening the Media File	574
Opening the File	579
Getting the File Length	581
Getting the Current Position	582
Getting the Current Status	582
Starting the File Playing	583
Updating the Progress Bar and Label Controls	583
Our MCI Commands Summary	584
Summary	585
Chapter 16: Visual Basic and Components	587
DDE, OLE, ActiveX – I Can't Take Any More!!!	587
DDE – The Dynamic Data Exchange	588
OLE – Object Linking and Embedding	588
ActiveX – Building the Future on the Foundations	589
of the Past	589
Taking a Peek at ActiveX Really Working	590
The Object Browser	599
Of Bindings and Personal Taste	602
Early Binding vs. Late Binding	603
Building Servers	604
Processes – It's all a Question of Delegation	604
Why Bother Choosing, and Which to Choose?	605
OK – So How Do I Do It ?	606
Building Your First Server	606
The OLE Container Control	610
Using the Container Control's Properties	616

Using the Clipboard to Create Objects	618
Linking and Embedding at Run Time	619
Loading and Saving Embedded Data	623
Linking and Embedding with the Clipboard	624
Summary	627

Chapter 17: Creating Your Own Controls **631**

A Color Control	632
An Improved Combo Box	637
The ActiveX Control Interface Wizard	639
Testing the Control	650
An Explanation of the Code	652
Controls have Standard Properties	653
The LimitToList Property	653
Controls have Methods	654
Controls have Events	654
Saving Design Properties	655
Properties Not Available at Design Time	656
Property Arrays	657
Summary	658

Chapter 18: Putting It All Together **661**

Where do I Start?	661
Designing the Application	662
Some Windows Thoughts for You	663
A Note about our Application	664
Step 1 – The Data is All Important	665
Step 2 – Building the Framework	673
Using the Application Wizard	673
Customizing the Framework Application	678
Step 3 – Building on the Framework	680
Adding Code to the Login Dialog	680
Step 4 – Extending the Framework	682
Adding the New/Edit Document Window	682
Adding the Open Document Window	689
Summary	692

Appendix A: Where to Now? **695**

All About the VB Family	695
VBA (Visual Basic: Applications Edition)	695
Visual Basic: Professional Edition	696
Visual Basic: Control Creation Edition	697
Visual Basic: Enterprise Edition	697

The Visual Studio 97 Suite	697
Getting it Out the Door	698
Help... I Feel So Alone	699
And Finally... Bedtime Reading	700
Beginning Visual Basic 5 Application Development	700
Other Notables	701

Appendix B: Visual Basic Naming Conventions **703**

Why Have a Standard Naming Scheme?	703
Naming Controls	704
Naming Custom Controls	706
Choosing a Control Usage Identifier	706
Naming Variables	706
Variable Scope	707
Variable Type	707
Choosing a Variable Usage Identifier	707
Declaring Variable Data Types	708
Object Variables	708
Naming Functions and Procedures	708
Naming Functions	709
Naming Procedures	709

Appendix C: Solutions **711**

Chapter 1	Welcome to Visual Basic	711
Chapter 2	Inside a Visual Basic Program	712
Chapter 3	Common Controls	713
Chapter 4	Writing Code	714
Chapter 5	Making Data Work For You	717
Chapter 6	List Controls	721
Chapter 7	Creating Your Own Objects	723
Chapter 8	Debugging and Good Design	727
Chapter 9	Menus	729
Chapter 10	Dialogs	730
Chapter 11	Graphics	733
Chapter 12	Using Database Controls	737
Chapter 13	Programming Database Access	739
Chapter 14	Object Variables	745
Chapter 15	Using DLLs and the API	747
Chapter 16	Visual Basic and Components	748
Chapter 17	Creating Controls	750
Chapter 18	Putting It All Together	753
