<i>Preface</i>	<i>page xi</i>
<b>1 Introduction</b> . . . . .	1
1.1 Concept of a Continuum	1
1.2 Sequence of Topics	2
<b>2 Cartesian Tensors</b> . . . . .	4
2.1 Index Notation and Summation Convention	4
2.2 Kronecker Delta and Permutation Symbol	6
2.2.1 Example: Skew Symmetry	7
2.2.2 Example: Products	8
2.3 Coordinate System	8
2.4 Coordinate Transformations	9
2.5 Vectors	12
2.6 Tensors	14
2.6.1 Examples of Tensors	14
2.6.2 Quotient Rule	17
2.6.3 Inner Products: Notation	18
2.7 Quadratic Forms and Eigenvalue Problems	18
2.7.1 Example: Eigenvalue Problem	20
2.7.2 Diagonalization and Polar Decomposition	21
2.7.3 Example: Polar Decomposition	23
<b>3 General Tensors</b> . . . . .	27
3.1 Vectors and Tensors	31
3.2 Physical Components	33
3.3 Tensor Calculus	33
3.4 Curvature Tensors	35
3.5 Applications	36
3.5.1 Example: Incompressible Flow	36
3.5.2 Example: Equilibrium of Stresses	37

<b>4</b>	<b>Integral Theorems</b> . . . . .	<b>42</b>
4.1	Gauss Theorem	42
4.2	Stokes Theorem	44
<b>5</b>	<b>Deformation</b> . . . . .	<b>49</b>
5.1	Lagrangian and Eulerian Descriptions	49
5.2	Deformation Gradients	51
5.2.1	Deformation Gradient Vectors	52
5.2.2	Curvilinear Systems	54
5.3	Strain Tensors	55
5.3.1	Decomposition of Displacement Gradients	56
5.3.2	Stretch	57
5.3.3	Extension	58
5.3.4	Infinitesimal Strains and Rotations	58
5.3.5	Deformation Ellipsoids	60
5.3.6	Polar Decomposition of the Deformation Gradient	63
5.3.7	Stretch and Rotation	64
5.3.8	Example: Polar Decomposition	65
5.3.9	Example: Square Root of a Matrix	67
5.4	Logarithmic Strain	68
5.5	Change of Volume	68
5.6	Change of Area	69
5.7	Compatibility Equations	70
5.8	Spatial Rotation and Two-Point Tensors	71
5.9	Curvilinear Coordinates	72
<b>6</b>	<b>Motion</b> . . . . .	<b>76</b>
6.1	Material Derivative	76
6.1.1	Some Terminology	77
6.1.2	Example: Path Line, Stream Line, and Streak Line	79
6.2	Length, Volume, and Area Elements	80
6.2.1	Length	81
6.2.2	Volume	81
6.2.3	Area	82
6.3	Material Derivatives of Integrals	82
6.3.1	Line Integrals	82
6.3.2	Area Integrals	83
6.3.3	Volume Integrals	83
6.4	Deformation Rate, Spin, and Vorticity	83
6.5	Strain Rate	86
6.6	Rotation Rate of Principal Axis	87

2.3 Coordinate System	8
2.4 Coordinate Transformations	9
2.5 Vectors	12
2.6 Tensors	14
2.6.1 Examples of Tensors	14
2.6.2 Quotient Rule	17
2.6.3 Inner Products: Notation	18
2.7 Quadratic Forms and Eigenvalue Problems	18
2.7.1 Example: Eigenvalue Problem	20
2.7.2 Diagonalization and Polar Decomposition	21
2.7.3 Example: Polar Decomposition	23
<b>3 General Tensors</b>	<b>27</b>
3.1 Vectors and Tensors	31
3.2 Physical Components	33
3.3 Tensor Calculus	33
3.4 Curvature Tensors	35
3.5 Applications	36
3.5.1 Example: Incompressible Flow	36
3.5.2 Example: Equilibrium of Stresses	37

<b>4</b>	<b>Integral Theorems</b> . . . . .	<b>42</b>
4.1	Gauss Theorem	42
4.2	Stokes Theorem	44
<b>5</b>	<b>Deformation</b> . . . . .	<b>49</b>
5.1	Lagrangian and Eulerian Descriptions	49
5.2	Deformation Gradients	51
5.2.1	Deformation Gradient Vectors	52
5.2.2	Curvilinear Systems	54
5.3	Strain Tensors	55
5.3.1	Decomposition of Displacement Gradients	56
5.3.2	Stretch	57
5.3.3	Extension	58
5.3.4	Infinitesimal Strains and Rotations	58
5.3.5	Deformation Ellipsoids	60
5.3.6	Polar Decomposition of the Deformation Gradient	63
5.3.7	Stretch and Rotation	64
5.3.8	Example: Polar Decomposition	65
5.3.9	Example: Square Root of a Matrix	67
5.4	Logarithmic Strain	68
5.5	Change of Volume	68
5.6	Change of Area	69
5.7	Compatibility Equations	70
5.8	Spatial Rotation and Two-Point Tensors	71
5.9	Curvilinear Coordinates	72
<b>6</b>	<b>Motion</b> . . . . .	<b>76</b>
6.1	Material Derivative	76
6.1.1	Some Terminology	77
6.1.2	Example: Path Line, Stream Line, and Streak Line	79
6.2	Length, Volume, and Area Elements	80
6.2.1	Length	81
6.2.2	Volume	81
6.2.3	Area	82
6.3	Material Derivatives of Integrals	82
6.3.1	Line Integrals	82
6.3.2	Area Integrals	83
6.3.3	Volume Integrals	83
6.4	Deformation Rate, Spin, and Vorticity	83
6.5	Strain Rate	86
6.6	Rotation Rate of Principal Axis	87

<b>7</b>	<b>Fundamental Laws of Mechanics</b>	<b>90</b>
7.1	Mass	90
7.2	Conservation and Balance Laws	91
7.2.1	Conservation of Mass	91
7.2.2	Balance of Linear Momentum	91
7.2.3	Balance of Angular Momentum	92
7.2.4	Balance of Energy	92
7.2.5	Entropy Production	92
7.3	Axiom of Material Frame Indifference	92
7.4	Objective Measures of Rotation	94
7.5	Integrity Basis	95
<b>8</b>	<b>Stress Tensor</b>	<b>98</b>
8.1	External Forces and Moments	98
8.2	Internal Forces and Moments	98
8.3	Cauchy Stress and Couple Stress Tensors	100
8.3.1	Transformation of the Stress Tensor	101
8.3.2	Principal Stresses	101
8.3.3	Shear Stress	102
8.3.4	Hydrostatic Pressure and Deviatoric Stresses	103
8.3.5	Objective Stress Rates	104
8.4	Local Conservation and Balance Laws	106
8.4.1	Conservation of Mass	106
8.4.2	Balance of Linear Momentum	107
8.4.3	Balance of Moment of Momentum (Angular Momentum)	107
8.5	Material Description of the Equations of Motion	108
8.5.1	First Piola–Kirchhoff Stress Tensor	109
8.5.2	Second Piola–Kirchhoff Stress Tensor	110
<b>9</b>	<b>Energy and Entropy Constraints</b>	<b>114</b>
9.1	Classical Thermodynamics	114
9.2	Balance of Energy	115
9.3	Clausius–Duhem Inequality	116
9.3.1	Fourier’s Law of Heat Conduction	118
9.3.2	Newton’s Law of Viscosity	119
9.3.3	Onsager’s Principle	119
9.3.4	Strain Energy Density	119
9.3.5	Ideal Gas	120
9.4	Internal Energy	121
9.4.1	Legendre or Contact Transformation	121
9.4.2	Surface Energy	123
9.5	Method of Jacobians in Thermodynamics	123

<b>7</b>	<b>Fundamental Laws of Mechanics</b> . . . . .	<b>90</b>
7.1	Mass	90
7.2	Conservation and Balance Laws	91
7.2.1	Conservation of Mass	91
7.2.2	Balance of Linear Momentum	91
7.2.3	Balance of Angular Momentum	92
7.2.4	Balance of Energy	92
7.2.5	Entropy Production	92
7.3	Axiom of Material Frame Indifference	92
7.4	Objective Measures of Rotation	94
7.5	Integrity Basis	95
<b>8</b>	<b>Stress Tensor</b> . . . . .	<b>98</b>
8.1	External Forces and Moments	98
8.2	Internal Forces and Moments	98
8.3	Cauchy Stress and Couple Stress Tensors	100
8.3.1	Transformation of the Stress Tensor	101
8.3.2	Principal Stresses	101
8.3.3	Shear Stress	102
8.3.4	Hydrostatic Pressure and Deviatoric Stresses	103
8.3.5	Objective Stress Rates	104
8.4	Local Conservation and Balance Laws	106
8.4.1	Conservation of Mass	106
8.4.2	Balance of Linear Momentum	107
8.4.3	Balance of Moment of Momentum (Angular Momentum)	107
8.5	Material Description of the Equations of Motion	108
8.5.1	First Piola–Kirchhoff Stress Tensor	109
8.5.2	Second Piola–Kirchhoff Stress Tensor	110
<b>9</b>	<b>Energy and Entropy Constraints</b> . . . . .	<b>114</b>
9.1	Classical Thermodynamics	114
9.2	Balance of Energy	115
9.3	Clausius–Duhem Inequality	116
9.3.1	Fourier’s Law of Heat Conduction	118
9.3.2	Newton’s Law of Viscosity	119
9.3.3	Onsager’s Principle	119
9.3.4	Strain Energy Density	119
9.3.5	Ideal Gas	120
9.4	Internal Energy	121
9.4.1	Legendre or Contact Transformation	121
9.4.2	Surface Energy	123
9.5	Method of Jacobians in Thermodynamics	123

<b>10 Constitutive Relations</b> . . . . .	129
10.1 Invariance Principles	130
10.1.1 Principles of Exclusion	130
10.1.2 Principle of Coordinate Invariance	131
10.1.3 Principle of Spatial Invariance	131
10.1.4 Principle of Material Invariance	132
10.1.5 Principle of Dimensional Invariance	132
10.1.6 Principle of Consistency	132
10.2 Simple Materials	132
10.3 Elastic Materials	134
10.3.1 Elastic Materials of Cauchy	134
10.3.2 Elastic Materials of Green	135
10.4 Stokes Fluids	137
10.5 Invariant Surface Integrals	138
10.6 Singularities	140
<b>11 Hyperelastic Materials</b> . . . . .	142
11.1 Finite Elasticity	142
11.1.1 Homogeneous Deformation	143
11.1.2 Simple Extension	144
11.1.3 Hydrostatic Pressure	145
11.1.4 Simple Shear	145
11.1.5 Torsion of a Circular Cylinder	146
11.2 Approximate Strain Energy Functions	148
11.2.1 Hookean Materials	149
11.2.2 Small-Strain Approximation	149
11.2.3 Plane Stress and Plane Strain	150
11.3 Integrated Elasticity	150
11.3.1 Example: Incremental Loading	151
11.4 A Variational Principle for Static Elasticity	152
11.5 Isotropic Thermoelasticity	154
11.5.1 Specific Heats and Latent Heats	155
11.5.2 Strain Cooling	156
11.5.3 Adiabatic and Isothermal Elastic Modulus	156
11.5.4 Example: Rubber Elasticity	157
11.6 Linear Anisotropic Materials	159
11.7 Invariant Integrals	160
<b>12 Fluid Dynamics</b> . . . . .	164
12.1 Basic Equations	164
12.2 Approximate Constitutive Relations	165
12.3 Newtonian Fluids	165
12.4 Inviscid Fluids	167

12.5	Shearing Flow	167
12.6	Pipe Flow	169
12.7	Rotating Flow	172
12.8	Navier–Stokes Equations	175
12.9	Incompressible Flow	175
12.10	Compressible Flow	176
12.11	Inviscid Flow	176
	12.11.1 Speed of Sound	177
	12.11.2 Method of Characteristics	178
12.12	Bernoulli Equation	179
12.13	Invariant Integrals	180
<b>13</b>	<b>Viscoelasticity</b> . . . . .	<b>184</b>
13.1	Kelvin–Voigt Solid	184
13.2	Maxwell Fluid	185
13.3	Standard Linear Solid	187
13.4	Superposition Principle	189
13.5	Constitutive Laws in the Operator Form	190
13.6	Three-Dimensional Linear Constitutive Relations	190
13.7	Anisotropy	191
13.8	Biot’s Theory	192
	13.8.1 Minimum Entropy Production Rate	194
13.9	Creep in Metals	194
13.10	Nonlinear Theories of Viscoelasticity	195
13.11	K-BKZ Model for Viscoelastic Fluids	196
<b>14</b>	<b>Plasticity</b> . . . . .	<b>200</b>
14.1	Idealized Theories	200
	14.1.1 Rigid Perfectly Plastic Material	200
	14.1.2 Elastic Perfectly Plastic Material	201
	14.1.3 Elastic Linearly Hardening Material	201
14.2	Three-Dimensional Theories	203
14.3	Postyield Behavior	206
	14.3.1 Levy–Mises Flow Rule	206
	14.3.2 Prandtl–Reuss Flow Rule	207
14.4	General Yield Condition and Plastic Work	208
	14.4.1 Plane Stress and Plane Strain	209
	14.4.2 Rigid Plasticity and Slip-Line Field	209
	14.4.3 Example: Symmetric External Cracks	212
14.5	Drucker’s Definition of Stability	213
14.6	Ilíushin’s Postulate	215
14.7	Work-Hardening Rules	216
	14.7.1 Perfectly Plastic Material	216
	14.7.2 Isotropic Hardening	216

14.7.3 Kinematic Hardening	217
14.7.4 Hencky's Deformation Theory	219
14.8 Endochronic Theory of Valanis	219
14.9 Plasticity and Damage	221
14.10 Minimum Dissipation Rate Principle	224
