Preface xi

Acknowledgements xiii

General notation xv

1 Introduction 1

2 The vibrations of systems having one degree of freedom 10
2.1 Free undamped vibration 11
2.1.1 Translational vibration 11
2.1.2 Torsional vibration 15
2.1.3 Non-linear spring elements 18
2.1.4 Energy methods for analysis 19
2.2 Free damped vibration 28
2.2.1 Vibration with viscous damping 29
2.2.2 Vibration with Coulomb (dry friction) damping 37
2.2.3 Vibration with combined viscous and Coulomb damping 40
2.2.4 Vibration with hysteretic damping 41
2.2.5 Energy dissipated by damping 43
2.3 Forced vibration 46
2.3.1 Response of a viscous damped system to a simple harmonic exciting force with constant amplitude 46
2.3.2 Response of a viscous damped system supported on a foundation subjected to harmonic vibration 55

2.3.2.1 Vibration isolation 56
2.3.3 Response of a Coulomb damped system to a simple harmonic exciting force with constant amplitude 69
2.3.4 Response of a hysteretically damped system to a simple harmonic exciting force with constant amplitude 70
2.3.5 Response of a system to a suddenly applied force 71
2.3.6 Shock excitation 72
2.3.7 Harmonic analysis 74
2.3.8 Random vibration 77
2.3.8.1 Probability distribution 77
2.3.8.2 Random processes 80
2.3.8.3 Spectral density 84
2.3.9 The measurement of vibration 86

3 The vibrations of systems having more than one degree of freedom 88
3.1 The vibration of systems with two degrees of freedom 92
3.1.1 Free vibration of an undamped system 92
3.1.2 Free motion 94
3.1.3 Coordinate coupling 96
3.1.4 Forced vibration 102
3.1.5 The undamped dynamic vibration absorber 104
3.1.6 System with viscous damping 113
3.2 The vibration of systems with more than two degrees of freedom 115
3.2.1 The matrix method 115
3.2.1.1 Orthogonality of the principal modes of vibration 118
3.2.2 The Lagrange equation 121
3.2.3 Receptances 125
3.2.4 Impedance and mobility 135

4 The vibrations of systems with distributed mass and elasticity 141
4.1 Wave motion 141
4.1.1 Transverse vibration of a string 141
4.1.2 Longitudinal vibration of a thin uniform bar 142
4.1.3 Torsional vibration of a uniform shaft 143
4.1.4 Solution of the wave equation 144
4.2 Transverse vibration 147
4.2.1 Transverse vibration of a uniform beam 147
4.2.2 The whirling of shafts 151
4.2.3 Rotary inertia and shear effects 152
4.2.4 The effects of axial loading 152
4.2.5 Transverse vibration of a beam with discrete bodies 153
4.2.6 Receptance analysis 155
4.3 The analysis of continuous systems by Rayleigh's energy method 159
4.3.1 The vibration of systems with heavy springs 159
4.3.2 Transverse vibration of a beam 160

4.3.3 Wind or current excited vibration 167
4.4 The stability of vibrating systems 169
4.5 The finite element method 170

5 Automatic control systems 172
5.1 The simple hydraulic servo 178
5.1.1 Open loop hydraulic servo 178
5.1.2 Closed loop hydraulic servo 180
5.2 Modifications to the simple hydraulic servo 185
5.2.1 Derivative control 185
5.2.2 Integral control 188
5.3 The electric position servomechanism 194
5.3.1 The basic closed loop servo 195
5.3.2 Servo with negative output velocity feedback 203
5.3.3 Servo with derivative of error control 207
5.3.4 Servo with integral of error control 207
5.4 The Laplace transformation 221
5.5 System transfer functions 224
5.6 Root locus 228
5.6.1 Rules for constructing root loci 230
5.6.2 The Routh–Hurwitz criterion 242
5.7 Control system frequency response 255
5.7.1 The Nyquist criterion 255
5.7.2 Bode analysis 271

6 Problems 280
6.1 Systems having one degree of freedom 280
6.2 Systems having more than one degree of freedom 292
6.3 Systems with distributed mass and elasticity 309
6.4 Control systems 311

7 Answers and solutions to selected problems 328

Bibliography 419
