Foreword	xxxvii
Acknowledgments	xxxviii
Introduction	xxxix
 Part I: AutoCAD and AutoCAD LT Basics	 1
 Quick Start: Drawing a Window	 3
Summary	13
 Chapter 1: Starting to Draw	 15
AutoCAD's Advantages	15
Comparing AutoCAD and AutoCAD LT	16
Starting AutoCAD and AutoCAD LT	17
Creating a New Drawing	17
Using the AutoCAD and AutoCAD LT Interface	17
The drawing area	18
The UCS icon	19
The crosshairs	20
The ribbon and Quick Access toolbar	20
Using the Application menu	21
The command line and dynamic input tooltip	22
The status bar	22
Creating a New Folder	22
Using the Interface	23
Saving a Drawing	25
Closing a Drawing and Exiting from AutoCAD and AutoCAD LT	27
Summary	28
 Chapter 2: Opening a Drawing	 29
Creating a New Drawing from a Template	29
Working with Templates	31
Customizing the default template	32
Creating your own templates	32
Creating a Drawing with Default Settings	33
Opening an Existing Drawing	33
Using other ways to open drawings	34
Switching among open drawings	34
Saving a Drawing under a New Name	35
Summary	36

Contents

Chapter 3: Using Commands	37
The AutoCAD and AutoCAD LT Interface	37
Using the ribbon	38
Using menus	39
Using shortcut menus	39
Using dialog boxes	40
Using toolbars	40
Using palettes	41
Tool palettes	41
The Command Line and Dynamic Input	42
Using Dynamic Input	43
Understanding command names	44
Responding to commands	45
Command Techniques	47
Repeating commands	47
Using recent input	48
Canceling commands	48
Undoing a command	49
Redoing a command	50
Using one command within another command	51
Of Mice and Pucks	52
Getting Help	54
Getting help on a command	54
Finding help with Quickstart links	54
Using the main Help system	55
The Contents tab	55
The Index tab	55
The Search tab	55
Working with Help screens	56
Using the InfoCenter	57
Search Help	57
The Communication Center	57
Favorites	57
Summary	58
Chapter 4: Specifying Coordinates	61
Understanding the X,Y Coordinate System	61
Drawing units	62
Types of measurement notation	62
Typing Coordinates	62
Using the Dynamic Input tooltip to enter coordinates	63
Typing coordinates in the Dynamic Input tooltip	63
Specifying Dynamic Input settings	63
Overriding Dynamic Input settings	66
Absolute Cartesian coordinates	66
Relative Cartesian coordinates	68
Polar coordinates	69

Direct distance entry	71
Orthogonal mode	71
Polar tracking.....	72
Setting polar tracking angles	72
Using polar tracking.....	73
Displaying Coordinates.....	75
Picking Coordinates on the Screen	76
Snap settings	76
Snapping to a grid.....	77
Snapping at polar angles	78
The grid	78
Object snaps.....	81
Running object snaps and Object Snap mode.....	85
Overriding Coordinate Settings	86
Locating Points.....	89
Object snap tracking	89
Using the temporary tracking feature	93
Point filters.....	93
From feature	94
Summary	95
Chapter 5: Setting Up a Drawing	97
Choosing Unit Types.....	97
Setting the drawing units.....	98
Setting the angle type	99
Setting the angle measure and direction	100
Drawing Limits	101
Understanding Scales.....	102
Working with scale formats.....	103
Using annotative scales.....	104
Customizing the scale list	106
Deciding on a scale and sheet size	107
Creating a Titleblock	107
Specifying Common Setup Options.....	108
Customizing with the MVSETUP Command and Setup Wizards	110
Summary	111
Part II: Drawing in Two Dimensions	113
Chapter 6: Drawing Simple Lines	115
Using the LINE Command	115
Drawing Rectangles	117
Drawing Polygons.....	117
Creating Construction Lines	120
Creating Rays.....	121
Summary	122

Contents

Chapter 7: Drawing Curves and Points	123
Drawing Circles	123
Understanding the circle options	123
Drawing circles	124
Drawing Arcs	126
Understanding arc options	126
Drawing arcs	127
Creating Ellipses and Elliptical Arcs	130
Understanding ellipse options	130
Creating ellipses	130
Creating elliptical arcs	131
Drawing ellipses	131
Making Donuts	133
Understanding DONUT options	133
Drawing donuts	134
Placing Points	134
Changing the point style	134
Creating points	135
Summary	137
Chapter 8: Viewing Your Drawing	139
Regenerating and Redrawing the Display	139
Panning	140
Using the PAN command	140
Using the scroll bars	140
Using the ZOOM Command	140
Understanding ZOOM options	141
Using ZOOM Dynamic	142
Using the SteeringWheel	145
Creating Named Views	146
Saving a view	146
Displaying a view	150
Managing named views	150
Creating animated presentations from named views	150
Using named views to manage a drawing	153
A drawing with a view	154
Partially opening a drawing	154
Using named views with sheet sets	155
Working with Tiled Viewports	155
Configuring tiled viewports	156
Creating tiled viewports	156
Removing tiled viewports	157
Using tiled viewports	158
Saving and restoring viewport configurations	158
Using Snap Rotation	160
Understanding User Coordinate Systems	161
Understanding UCS options	162
Saving and restoring a custom UCS	163

Controlling the UCS icon	164
Using a custom UCS.....	165
Creating Isometric Drawings.....	166
Understanding isometric planes	167
Drawing in Isometric mode	167
Summary	168
Chapter 9: Editing Your Drawing with Basic Tools	169
Editing a Drawing.....	169
Understanding object-selection basics	170
Erasing objects	170
Moving objects	172
Copying objects.....	174
Copying and moving objects from one drawing to another	177
Rotating objects.....	177
Scaling objects.....	180
Using the CHANGE command.....	182
Changing lines	182
Changing circles.....	183
Selecting Objects	184
Selecting objects after choosing a command	184
Cycling through objects	187
Selecting objects before choosing a command	187
Implied windowing.....	187
Customizing the selection process.....	189
Pickbox Size.....	189
Selection Preview	190
Noun/verb selection	190
Use Shift to Add to Selection.....	190
Press and Drag	190
Implied windowing.....	191
Object grouping.....	191
Associative Hatch	191
Summary.....	191
Chapter 10: Editing Your Drawing with Advanced Tools.	193
Copying and Moving Objects	193
Mirroring objects.....	194
Using the ARRAY command.....	195
Rectangular arrays.....	195
Polar (circular) arrays.....	197
Offsetting objects	200
Aligning objects.....	203
Using the ALIGN command.....	203
Using the 3DALIGN command	204
Resizing Commands	206
Trimming objects	206
Extending objects	210
Lengthening objects	212
Stretching objects.....	214

Contents

Using Construction Commands.....	218
Breaking objects.....	218
Joining objects.....	218
Creating chamfered corners.....	221
Creating rounded corners.....	223
Creating a Revision Cloud	226
Hiding Objects with a Wipeout	227
Constraining Objects with Parameters	228
Using geometric constraints	228
Auto-constraining objects.....	230
Using dimensional constraints.....	230
Working with the Parameters Manager.....	231
Double-Clicking to Edit Objects	233
Grips	234
Stretching with grips	236
Stretching one line	236
Stretching multiple lines	236
Moving with grips	237
Rotating with grips	237
Scaling with grips	237
Mirroring with grips	238
Customizing grips	240
Editing with the Quick Properties Palette and the Properties Palette.....	241
Using the Quick Properties palette	241
Using the Properties palette.....	243
Selection Filters	245
Using Quick Select to select objects.....	245
Using the FILTER command	247
Creating a single filter	247
Adding a second filter	248
Naming and editing filters.....	249
Using filters.....	249
Groups	251
Creating and modifying groups in AutoCAD	251
Creating a new group.....	252
Changing a group	252
Creating and modifying groups in AutoCAD LT.....	253
Creating a new group.....	253
Changing a group in AutoCAD LT	253
Using groups.....	254
Summary	254
Chapter 11: Organizing Drawings with Layers, Colors, Linetypes, and Lineweights.	255
Working with Layers	255
Understanding layers.....	256
Creating new layers.....	256
Naming the layer.....	258
Assigning a color.....	258
Assigning a linetype	261
Assigning a lineweight.....	262

Using layers.....	264
Switching the current layer	265
Changing a layer's state	265
Saving layer states	267
Changing an existing object's layer.....	269
Making an object's layer current.....	269
Using special layer tools	269
Modifying layers.....	272
Managing columns.....	272
Filtering the layer list	273
Changing a layer's color, linetype, and lineweight.....	274
Renaming layers.....	275
Deleting layers	275
Purging layers and linetypes.....	275
Changing Object Color, Linetype, and Lineweight.....	277
Changing an object's color	277
Changing the current color.....	278
Changing an object's linetype	278
Changing the current linetype	279
Changing an object's lineweight	279
Changing the current lineweight	280
Working with Linetype Scales	282
Changing linetype spacing by using a different linetype	282
Changing linetype spacing by changing the global linetype scale.....	282
Changing linetype spacing by changing the object linetype scale.....	284
Changing the current object linetype scale	284
Changing an existing object's linetype scale	284
Importing Layers and Linetypes from Other Drawings.....	286
Matching Properties.....	287
Summary.....	288

Chapter 12: Obtaining Information from Your Drawing 289

Drawing-Level Information.....	289
Listing the status of your drawing.....	289
Listing system variables	290
Tracking drawing time	291
Object-Level Information.....	293
Listing objects	293
Finding coordinates.....	294
Measuring objects.....	294
Getting information from the Properties palette.....	297
Getting information from the Quick Properties panel.....	297
Dividing and Spacing Commands.....	298
Dividing objects	298
Measuring objects.....	299
AutoCAD's Calculator.....	300
Calculating numbers	301
Using coordinates.....	302
Using object snaps.....	303
Using the scientific calculator	303

Contents

Converting units	304
Working with QuickCalc variables.....	304
Using QuickCalc in the Properties palette	305
Summary	308

Chapter 13: Creating Text. 309

Creating Single-Line Text	309
Justifying single-line text	310
Setting the height	311
Setting the rotation angle.....	312
Adding special characters and formatting.....	312
Editing single-line text.....	314
Scaling text	315
Justifying text.....	316
Understanding Text Styles.....	317
Creating a new text style	318
Font	318
Size	319
Effects.....	319
Renaming and deleting text styles.....	320
Modifying a text style	321
Making a style current or changing a text object's style.....	321
Importing a text style	322
Creating Multiline Text.....	322
Using the In-Place Text Editor.....	322
Specifying and changing line spacing	329
Specifying width and rotation	330
Creating text for different scales	330
Editing paragraph text.....	332
Importing text	333
Creating Tables.....	335
Inserting a table.....	335
Specifying a table style	336
General properties.....	338
Text properties.....	338
Border properties	338
Completing the table style.....	339
Adding data to a table	339
Entering data into a table	339
Linking to external data	340
Extracting data from drawing objects	342
Modifying a table.....	345
Changing the text.....	345
Changing table properties	345
Changing cell properties	345
Breaking a table into sections	347
Inserting Fields.....	350
Creating fields	350
Editing and updating fields	352

Managing Text	354
Using Quicktext	354
Using AutoCAD and AutoCAD LT fonts	354
Freezing text layers	354
Using MIRRTEXT	354
Finding Text in Your Drawing	356
Checking Your Spelling	357
Summary	359

Chapter 14: Drawing Dimensions. 361

Working with Dimensions	361
The elements of a dimension	361
Preparing to dimension	363
Drawing Linear Dimensions	363
Specifying the dimensioned object	364
Using dimension options	366
MText	366
Text	367
Angle	367
Horizontal/vertical	367
Rotated	368
Creating jogged dimension lines	368
Drawing Aligned Dimensions	369
Specifying the dimensioned object	369
Using the options	370
Creating Baseline and Continued Dimensions	371
Drawing baseline dimensions	371
Drawing continued dimensions	372
Dimensioning Arcs and Circles	374
Marking arc and circle centers	375
Dimensioning arc lengths	375
Creating radial dimensions	376
Creating diameter dimensions	376
Dimensioning Angles	377
Creating Ordinate Dimensions	380
Drawing Leaders	383
Creating a multileader	383
Editing multileaders	384
Creating a multileader style	384
Aligning and combining leaders	387
Using Quick Dimension	391
Creating Inspection Dimensions	394
Creating Geometric Tolerances	395
Starting the tolerance frame	396
Inserting the tolerance frame	398
Editing a tolerance frame	398

Contents

Editing Dimensions	400
Editing associativity.....	400
DIMREASSOCIATE	400
DIMDISASSOCIATE	401
DIMREGEN	401
Using the DIMEDIT command	402
Using the DIMTEDIT command.....	402
Flipping dimension arrows.....	404
Editing dimension text	404
Using the Properties palette to edit dimensions	404
Changing annotative scales.....	404
Spacing dimensions equally apart.....	405
Breaking dimensions	405
Using Quick Dimension to edit dimensions	406
Using grips to edit dimensions	407
Editing objects and dimensions together	407
Summary	409
Chapter 15: Creating Dimension Styles	411
Understanding Dimension Styles	411
Defining a New Dimension Style	413
Managing dimension lines.....	413
Dimension lines	414
Extension lines.....	415
Defining symbols and arrows	416
Defining arrowheads	416
Defining symbols	418
Managing dimension text	420
Text appearance.....	420
Text placement	421
Text alignment	422
Fitting dimensions into tight spaces	423
Fit Options	424
Text Placement	426
Scale for Dimension Features	427
Defining primary units	428
Linear Dimensions	430
Angular Dimensions.....	431
Defining alternate units	431
Formatting tolerances.....	434
Changing Dimension Styles	436
Choosing a new current dimension style	436
Creating a variant of a dimension style	436
Modifying a dimension to use a new dimension style	437
Modifying dimension styles	437
Overriding a dimension style.....	437
Updating dimensions	438
Comparing dimension styles	438
Copying dimension styles from other drawings	439
Summary	442

Chapter 16: Drawing Complex Objects 443

Creating and Editing Polylines.....	443
Using the PLINE command.....	444
Editing polylines with the PEDIT command.....	447
Editing polylines with the Properties palette or Quick Properties palette.....	449
Drawing and Editing Splines	450
Creating splines.....	451
Editing splines.....	452
Creating Regions.....	455
Creating Boundaries	457
Creating Hatches	458
Understanding hatch patterns	459
Defining a hatch	460
Specifying the hatch type and pattern	460
Setting the hatch angle and scale.....	461
Setting the hatch origin	463
Determining the hatch boundary.....	463
Islands	465
Other advanced options.....	466
Dragging and dropping hatch patterns	467
Creating gradient fills	467
Editing hatches.....	469
Using the SOLID command.....	471
Creating and Editing Multilines	471
Creating a multiline style.....	472
Defining multiline style properties	473
Saving a new multiline style	474
Loading a multiline style	474
Drawing multilines.....	476
Editing multilines.....	478
Creating Dlines in AutoCAD LT.....	480
Using the SKETCH Command.....	480
Digitizing Drawings with the TABLET Command.....	483
Summary.....	484

Chapter 17: Plotting and Printing Your Drawing. 487

Preparing a Drawing for Plotting or Printing.....	487
Doing a draft plot	487
Plotting a drawing from model space.....	488
Creating a Layout in Paper Space.....	488
Entering paper space	488
Using the Layout Wizard.....	489
Laying out a drawing in paper space on your own.....	491
Managing layouts	492
Using the Page Setup Manager	493
Preparing layers	495
Inserting a titleblock	495
Creating floating viewports	495
Returning to model space while on a layout.....	497

Contents

Setting viewport scale.....	497
Locking the viewport	498
Setting viewport size, placement, and display	498
Controlling scale for noncontinuous linetypes	498
Setting layer visibility and properties within a viewport	499
Setting hidden and shaded views for viewports.....	500
Annotating a layout.....	501
Using annotation objects on a layout.....	502
Adding text and dimensions in paper space	504
Export a layout to model space of a new drawing	505
Saving a layout template.....	505
Working with Plot Styles	509
Setting the plot-style mode.....	509
Creating a plot-style table.....	510
Creating a named plot-style table	510
Editing a plot-style table	512
Attaching a plot-style table to a layout.....	514
Setting the plot-style property for a layer or object	515
Plotting a Drawing.....	517
Specifying plot settings.....	518
Previewing your plot	519
Creating a plot stamp	519
Creating the plot	520
Summary	522

Part III: Working with Data

523

Chapter 18: Working with Blocks and Attributes 525

Combining Objects into Blocks	526
Understanding base points and insertion points	526
Creating a block	527
Redefining a block.....	529
Saving blocks as files	530
Replacing an existing file	531
Inserting Blocks and Files into Drawings	532
Using the Insert dialog box.....	533
Using the DesignCenter.....	535
Managing Blocks.....	538
Working with layers.....	538
Exploding blocks.....	541
Using the XPLODE command	542
Editing blocks	543
Double-clicking to edit blocks.....	543
Editing blocks with grips	543
Updating blocks.....	544
Substituting blocks	544

Creating and Using Dynamic Blocks	545
Understanding action-based parameters	546
Understanding the work flow of dynamic blocks	547
Defining a dynamic block with action-based parameters	548
Adding a parameter	550
Adding an action	551
Adding visibility parameters	554
Adding lookup parameters and actions	556
Using parameter sets	557
Using parametric constraints	558
Creating a Block Table	559
Saving and testing dynamic blocks	560
Inserting and modifying dynamic blocks	560
Using Windows Features to Copy Data	569
Manipulating objects with the Windows Clipboard	569
Using drag-and-drop	569
Working with Attributes	572
Creating attribute definitions	573
Mode section	573
Attribute section	574
Text Settings section	575
Insertion Point section	575
Creating the block	576
Inserting blocks with attributes	578
Editing attributes	578
Editing attribute properties in AutoCAD	578
Editing attribute properties in AutoCAD and AutoCAD LT	581
Making global changes in attributes	582
Redefining attributes	583
Extracting a database from attributes	585
Summary	592
Chapter 19: Referencing Other Drawings	591
Understanding External References	591
Attaching an external reference	592
Opening an xref	593
Using the External References palette	593
Editing an Xref within Your Drawing	596
Choosing the xref or block to edit	596
Editing the xref	598
Controlling Xref Display	600
Xrefs and dependent symbols	600
Xrefs and layers	600
The XBIND command	600
Circular references	601
Clipping xrefs	601

Contents

Speeding up the display of large xrefs.....	602
Demand loading.....	603
Spatial indexes	603
Layer indexes	604
Managing Xrefs.....	607
Xref notification	608
DesignCenter.....	608
The xref log file	608
Working with DWF, DGN, and PDF Underlays	609
Attaching a DWF underlay	609
Attaching a DGN underlay	610
Attaching a PDF underlay.....	610
Modifying an underlay	610
Adjusting the appearance of an underlay.....	610
Clipping an underlay	611
Displaying the frame of an underlay.....	611
Using object snaps with underlays	611
Control the layers of an underlay	612
Summary	612

Chapter 20: Working with External Databases 613

Understanding External Database Access.....	614
Preparing for Database Connectivity.....	615
Organizing the database structure	616
Configuring a data source.....	616
Connecting to Your Database.....	620
Connecting a database to a drawing	620
Opening a data table	621
Editing data in the Data View window.....	624
Linking Data to Drawing Objects.....	625
Creating a link template	625
Creating a link.....	627
Viewing linked objects and rows.....	627
Editing links	628
Exporting link information	629
Creating Labels.....	632
Creating label templates	632
Creating attached labels.....	633
Creating freestanding labels.....	634
Querying with the Query Editor	635
Using the Quick Query tab.....	636
Using the Range Query tab.....	636
Using the Query Builder tab.....	637
Building a query with multiple criteria.....	637
Specifying fields and sorting.....	637
Using the SQL Query tab	638
Creating selection sets with Link Select	639

Working with Query Files	640
Storing queries	640
Importing and exporting queries	641
Summary	641

Part IV: Drawing in Three Dimensions 643

Chapter 21: Specifying 3D Coordinates 645

Working in a 3D Environment	646
Using 3D Coordinates	647
Absolute and relative Cartesian coordinates in 3D	647
Cylindrical and spherical coordinates	647
Using editing commands with 3D wireframes	649
Using point filters, object snaps, object tracking, and grips in 3D	652
Point filters	652
Object snaps	652
Object tracking	653
Grips	653
Creating 3D polylines	655
Creating helixes	656
Using Elevation and Thickness	656
Creating surfaces with thickness	657
Using the HIDE command	658
Controlling the display of hidden lines and objects	658
Adding elevation to objects	660
Working with the User Coordinate System	663
Using the UCS icon	663
UCSs and viewpoints	663
Using UCS options to change the UCS	664
Changing the UCS dynamically	665
Summary	669

Chapter 22: Viewing 3D Drawings 671

Working with the Standard Viewpoints	672
Using the VPOINT command	672
Looking at a drawing from the standard viewpoints	672
Using DDVPOINT	674
Using the ViewCube to View Your Drawing	675
Creating a Named View with a Camera	677
Creating a camera	677
Editing a camera	678
Adding a Background to a Named View	681
Working with the Tripod and Compass	682
Displaying a Quick Plan View	684
Displaying Parallel and Perspective Projections	684

Contents

Using 3D Orbit	684
Starting 3D Orbit	685
Navigating with 3D Orbit	686
Using the 3D Orbit visual aids	687
Creating a continuous orbit	688
Resetting the view	688
Refining your 3D Orbit view	688
Panning in 3D Orbit	688
Zooming in 3D Orbit	688
Using Zoom options in 3D Orbit	689
Adjusting the camera distance	689
Controlling view properties	689
Creating parallel and perspective views	689
Using a preset view	689
Using ShowMotion to Cycle Through Views	690
Creating shots	690
Displaying shots	692
Walking Through a Model	693
Navigating in Walk mode	693
Specifying Walk mode settings	695
Flying through a model	696
Saving the walk as a movie file	696
Using a motion path to save a movie file	697
Navigating with the Wheel	701
Using DVIEW to Create a Perspective View	703
Using DVIEW	703
Understanding the DVIEW options	703
Working with Visual Styles	705
Displaying visual styles in AutoCAD	705
Creating custom visual styles	706
Using the shading options in AutoCAD LT	708
Display materials, textures, and lights as you work	709
Laying Out 3D Drawings	711
Using SOLVIEW to lay out paper space viewports	711
Using SOLDRAW to create hidden lines and hatching	712
Using SOLPROF to create profiles	713
Flattening 3D drawings	714
Printing in 3D	715
Summary	716
Chapter 23: Creating 3D Surfaces	717
Drawing Surfaces with 3DFACE	718
Using the 3DFACE command	718
Making 3D face edges invisible	719
Controlling visibility during 3D face creation	719
Using the EDGE command	719
Using the SPLFRAME system variable	720
Drawing Surfaces with PFACE	723

Creating Plane Surfaces.....	728
Creating Polygon Meshes with 3DMESH	729
Drawing Standard 3D Shapes	731
Box.....	731
Wedge.....	732
Pyramid.....	733
Cone	734
Sphere.....	735
Dome	735
Dish	736
Torus	737
Mesh	738
Drawing Revolved Surfaces.....	740
Understanding the REVSURF command.....	740
Determining the angle of rotation.....	741
Setting the number of segments	742
Using the REVSURF command	742
Working with the REVOLVE command	744
Drawing an Extruded Surface	744
Working with the TABSURF command.....	744
Working with the EXTRUDE command	747
Sweeping objects along a path.....	747
Drawing Surfaces Between 2D Objects.....	748
Creating ruled surfaces.....	748
Lofting objects.....	751
Drawing Edge Surfaces	751
Working with Multiple Types of Objects	753
Converting 2D objects to surfaces	754
Converting meshes to smooth surfaces.....	754
Thickening a surface into a solid	754
Extracting edges from a surface or a region	754
Summary	755
Chapter 24: Creating Solids and Editing in 3D	757
Drawing Basic Smooth Solids	758
Drawing a box.....	758
Drawing a wedge.....	760
Drawing a cone	760
Drawing a sphere	761
Drawing a cylinder	762
Drawing a torus.....	763
Drawing a pyramid.....	764
Creating Extruded Solids	766
Managing objects used to make other objects.....	767
Using the EXTRUDE command.....	767
Drawing Swept Solids	769
Drawing Revolved Solids	770
Drawing Lofted Solids	772
Drawing Polyline-Like Solids.....	774

Contents

Manipulating Solids.....	777
Grip-editing solids.....	777
Selecting sub-objects	777
Moving, rotating, and scaling with the gizmos.....	778
Using the Move gizmo and the 3DMOVE command	778
Using the Rotate gizmo and the 3DROTATE command	780
Using the Scale gizmo and the 3DSCALE command	782
Working with Mesh Shapes	783
Creating meshes	784
Editing meshes	784
Using grips and gizmos to edit meshes.....	784
Adjusting mesh smoothness.....	784
Refining a mesh	785
Extruding a face	785
Splitting a face	785
Creasing a mesh.....	786
Converting solids and meshes	786
Converting smooth solids and surfaces to meshes.....	786
Converting meshes to smooth solids	788
Creating Complex Solids	791
Combining solids	791
Subtracting solids.....	792
Creating a solid from the intersection of two solids	792
Creating a new solid by using INTERFERE.....	793
Pressing or pulling a region	796
Using solid history	797
Sectioning and Slicing Solids	798
Using the SECTION command.....	798
Creating an interactive section object	800
Using the SLICE command	801
Using Editing Commands in 3D	803
Mirroring in 3D.....	804
Arraying in 3D	806
Creating 3D rectangular arrays.....	806
Creating 3D polar arrays	807
Rotating in 3D.....	809
Aligning in 3D.....	811
Trimming and extending in 3D.....	813
Filleting in 3D	815
Chamfering in 3D.....	817
Exploding and converting 3D objects.....	819
Using the SOLIDEDIT Command.....	820
Editing faces.....	821
Extruding faces	821
Moving faces.....	821
Offsetting faces.....	821
Deleting faces.....	822
Rotating faces.....	822
Tapering faces.....	822
Copying faces.....	823

Coloring faces	823
Attaching a material to a face	824
Editing edges.....	824
Editing bodies	824
Imprinting solids.....	824
Cleaning solids.....	825
Separating solids	825
Shelling solids.....	826
Checking solids.....	826
Listing Solid Properties	827
Summary	829

Chapter 25: Rendering in 3D 831

Understanding Rendering	832
Learning the steps	832
Doing a default rendering.....	833
Creating Lights	834
Setting the default light	834
Creating a point light	834
Name	835
Intensity/Intensity factor	835
Status.....	835
Photometry	835
Shadow	836
Attenuation	836
Color/Filter Color	837
Creating a target point light.....	837
Creating a spotlight	837
Creating a Free spotlight	838
Creating a distant light	839
Simulating the sun	839
Set the geographic location	840
Set sun properties	841
Managing lights.....	843
Working with Materials	847
Attaching a material from the Tool Palettes window	847
Using the Materials palette	848
Creating your own materials.....	849
Choose a material type and template.....	849
Choose a material color.....	850
Choosing other material properties	851
Adding textures, opacity, and bump maps	851
Adjusting the mapping.....	853
Adjusting lighting effects.....	854
Attaching materials.....	855
Using backgrounds.....	856
Doing the Final Render.....	858
Statistics	861
Saving rendered images	861
Summary	862

Part V: Organizing and Managing Drawings

863

Chapter 26: Keeping Control of Your Drawings 865

Accessing Drawing Components with the DesignCenter	866
Navigating with the DesignCenter	866
Finding named components and drawings.....	867
Using the Favorites folder	868
Accessing named drawing components	869
Inserting drawings	869
Opening drawings.....	869
Inserting blocks	869
Inserting raster images	869
Attaching an xref.....	869
Inserting layers and styles	870
Controlling the DesignCenter display	870
Accessing Drawing Content with Tool Palettes	872
Creating a new tool palette	873
Adding content tools	873
Adding command tools	874
Dragging objects from your drawing	874
Adding commands.....	874
Copying a tool.....	874
Setting tool properties	875
Adjusting the scale of inserted content	875
Moving, deleting, and renaming tools and tool palettes.....	876
Updating tools	876
Setting tool palette options.....	877
Organizing tool palettes.....	877
Using a tool palette.....	878
Setting Standards for Drawings.....	880
Using the CAD Standards tools	881
Creating a standards file	881
Associating a standards file with a drawing	882
Checking a drawing against standards.....	883
Specifying CAD standards settings	884
Using layer notification	886
Translating layers	888
Setting up the layer mapping	888
Managing layer translations.....	889
The Communication Center.....	891
Renaming named objects.....	892
Working with Sheet Sets.....	892
Understanding sheet sets.....	893
Creating a sheet set.....	894
Setting properties.....	897
Creating subsets.....	899
Setting up sheet set references	899
Configuring titleblock text	900
Configuring label and callout blocks	902
Adding and managing sheets.....	903

Using a sheet set.....	907
Creating viewports from named views	907
Inserting callout blocks	908
Plotting and publishing.....	908
Archiving and eTransmitting sheet sets	909
Creating a list of sheets	910
Organizing Your Drawings	913
Archiving drawings	913
Finding drawings	913
Specifying drawing properties	915
Maintaining Security.....	915
Password protection	915
Digital signatures.....	916
Keeping Track of Referenced Files	917
Handling Errors and Crashes.....	919
Taking care of temporary files	919
Repairing corrupted drawing files.....	919
Using backup drawings	920
Recovering from a crash	921
Managing Drawings from Prior Releases	922
Summary	922

Chapter 27: Working with Other Applications 923

Importing and Exporting Other File Formats.....	924
Exporting drawings	924
Exporting to DXF format	925
Exporting to DGN format	925
Exporting to PDF format.....	927
Exporting to other file formats	928
Controlling the display of exported WMF files.....	928
Importing files.....	929
Importing a DGN file	930
Inserting a DXF file	931
Working with Raster Images.....	931
Attaching images	932
Managing images.....	933
Clipping images	934
Controlling image display.....	935
Image display.....	935
Image quality	935
Image transparency	935
Image frame	935
Draw order	936
Pasting, Linking, and Embedding Objects	938
Embedding objects into a drawing	938
Using Paste Special.....	940
Pasting data into your drawing.....	940
Pasting drawing objects into another application	941
Linking data	943
Summary	946

Contents

Chapter 28: Creating Electronic Output 947

Sending Drawings.....	947
Using eTransmit.....	948
Specifying transmittal settings.....	948
Opening Drawings from the Web.....	951
Using the Browse the Web – Open dialog box.....	951
Using i-drop to drag objects into a drawing.....	951
Creating Object Hyperlinks.....	952
Creating a hyperlink.....	952
Using a hyperlink.....	954
Editing a hyperlink.....	954
Publishing Drawings.....	955
Understanding DWF and DWFx files.....	956
Creating 2D DWF and DWFx files.....	956
Starting the PUBLISH command.....	957
Adding drawings to the drawing list.....	957
Removing model space or layout tabs from the drawing list.....	958
Editing the drawing list.....	958
Defining the output.....	959
Setting publish options.....	959
Publishing.....	960
Creating DWF files from other applications.....	960
Auto-publishing.....	960
Creating 3D DWF and 3D DWFx files.....	962
Using the Publish to Web Wizard.....	963
Posting DWF and DWFx files directly.....	965
Editing Web pages.....	965
Viewing DWF and DWFx drawings.....	966
Using view options.....	966
Printing and plotting.....	967
Summary.....	970

Part VI: Customizing AutoCAD and AutoCAD LT 971

Chapter 29: Customizing Commands, Toolbars, and Tool Palettes 973

Working with Customizable Files.....	973
Editing customizable files.....	975
Backing up customizable files.....	976
Using the command-line form of commands.....	976
Documenting your files.....	978
Creating Shortcuts for Commands.....	979
Creating shortcuts to Windows programs.....	979
Creating keyboard shortcuts to commands.....	980
Customizing Toolbars.....	982
Customizing classic toolbars.....	983
Removing buttons from an existing toolbar.....	983
Creating a new toolbar.....	984

Adding buttons.....	984
Creating a custom command.....	985
Using the Button Editor	986
Creating flyouts.....	987
Removing custom commands.....	988
Customizing the Quick Access Toolbar	988
Creating and displaying a Quick Access toolbar	988
Adding a drop-down menu	989
Customizing Tool Palettes	992
Summary	993
Chapter 30: Creating Macros and Slide Shows	995
Creating Macros with Script Files	995
Creating the script file	996
Running a script file	997
Running a script file from within a drawing	997
Running a script when starting AutoCAD or AutoCAD LT	997
Recording Actions	1000
Creating an action macro.....	1000
Editing an action macro	1000
Playing back a macro.....	1002
Creating Slide Shows	1002
Creating slides.....	1002
Viewing slides	1002
Using scripts to create slide shows.....	1003
Creating Slide Libraries.....	1005
Summary	1006
Chapter 31: Creating Your Own Linetypes and Hatch Patterns	1007
Creating Linetypes.....	1007
Creating simple linetypes	1007
Creating complex linetypes	1009
Creating Hatch Patterns.....	1012
Summary	1017
Chapter 32: Creating Shapes and Fonts	1019
Creating Shapes	1020
Using shape files.....	1020
Creating shape files	1020
Using length and direction codes	1021
Using supplemental shape codes.....	1022
Editing shape files	1027
Creating Fonts.....	1028
Summary	1029
Chapter 33: Customizing the Ribbon and Menus	1031
Working with the Customization File.....	1031
Understanding the Customization file	1032

Contents

Loading and unloading customization files.....	1032
Loading and unloading a customization file	1033
Loading and unloading partial customization files.....	1034
Transferring customization between files	1035
Customizing the Interface.....	1035
Looking at a ribbon panel.....	1036
Writing macros	1038
Customizing the ribbon.....	1040
Understanding ribbon panels.....	1040
Adding a command to a ribbon panel	1041
Adding a ribbon panel to a tab.....	1042
Adding a tab to the ribbon	1042
Adding a tab to a contextual tab state.....	1042
Customizing the drop-down menu.....	1043
Creating submenus	1044
Customizing shortcut menus	1047
Customizing mouse buttons and tablet buttons.....	1050
Customizing image-tile menus	1051
Customizing tablet menus.....	1052
Working with the Screen menu.....	1053
Creating keyboard shortcuts.....	1054
Working with shortcut keys.....	1054
Working with temporary override keys.....	1055
Customizing the double-click behavior	1056
Customizing the Quick Properties palette and rollover tooltips.....	1056
Summary	1058

Part VII: Programming AutoCAD **1059**

Chapter 34: Understanding AutoLISP and Visual LISP Basics 1061

Introducing Visual LISP.....	1062
Opening Visual LISP	1062
Opening and loading an AutoLISP file with Visual LISP	1062
Loading an AutoLISP file	1062
Using an AutoLISP routine in AutoCAD	1064
Looking at an AutoLISP routine	1065
Using the Visual LISP editor.....	1066
Closing a file and Visual LISP	1067
Getting Help in Visual LISP	1068
Working with AutoLISP Expressions	1069
Understanding AutoLISP syntax.....	1069
Working with numbers and text.....	1069
Using AutoLISP on the Command Line	1071
Creating AutoLISP Files.....	1072
Summary	1074

Chapter 35: Exploring AutoLISP Further	1075
Creating Variables.....	1075
Working with AutoCAD Commands	1076
Accessing AutoCAD commands.....	1076
Creating functions.....	1077
Creating functions with arguments.....	1079
Working with system variables.....	1081
Working with Lists.....	1083
Using lists for coordinates	1083
Creating dotted pairs.....	1084
Setting Conditions.....	1084
Conditional statements.....	1084
Loop statements	1086
Managing Drawing Objects.....	1089
Getting information about an object.....	1089
Modifying objects.....	1091
Creating selection sets.....	1092
Getting Input from the User	1094
Putting on the Finishing Touches	1096
Summary.....	1098
Chapter 36: Exploring Advanced AutoLISP Topics	1099
Understanding Global and Local Variables	1099
Working with Visual LISP ActiveX Functions.....	1101
Reviewing AutoLISP retrieval and modification	1101
Using ActiveX with Visual LISP	1105
Retrieving and modifying object information with ActiveX	1105
Creating objects with ActiveX	1108
Debugging Code.....	1109
Using the Error Trace window.....	1110
Working with breakpoints	1110
Using the Watch window	1113
Summary.....	1114
Chapter 37: Programming with Visual Basic for Applications	1115
Starting to Work with VBA.....	1116
Opening the VBA environment.....	1116
Getting acquainted with VBA	1117
Objects and collections of objects	1118
Methods and properties	1118
Investigating the hierarchy model.....	1118
Accessing help.....	1120
Writing VBA Code.....	1121
Looking at VBA syntax	1122
Saving a VBA routine.....	1124
Loading a VBA routine	1125
Running a VBA routine.....	1125
Using the Visual Basic Editor.....	1125

Contents

Understanding variables	1127
Creating VBA statements	1128
Getting User Input	1129
Creating Dialog Boxes	1132
Understanding the Toolbox toolbar	1132
Changing dialog box properties	1133
Adding dialog box controls	1134
Add a command button	1134
Write the VBA Code for a command button	1135
Add a label	1135
Add other dialog box controls	1136
Modifying Objects	1138
Using constants	1139
Using functions	1139
Debugging and Trapping Errors	1140
Moving to Advanced Programming	1141
Summary	1141
A Final Word	1142

Part VIII: Appendixes **1143**

Appendix A: Installing and Configuring AutoCAD and AutoCAD LT . . . 1145

Appendix B: AutoCAD and AutoCAD LT Resources 1177

Appendix C: What's on the DVD-ROM 1183

Index 1191
