

# CONTENTS

Preface	20
A request	21
An appetizer	23
FIRST PART : CLASSICAL PHYSICS – HOW DO THINGS AND IMAGES MOVE?	
CHAPTER I GALILEAN MOTION	28
1. Why should we care about motion?	28
2. Galilean physics – motion in everyday life	42
3. Global descriptions of motion – the simplicity of complexity	173
4. From the limitations of physics to the limits of motion	263
CHAPTER II SPECIAL RELATIVITY	275
5. Maximum speed, observers at rest, and motion of light	275
CHAPTER III GRAVITATION AND RELATIVITY	349
6. Maximum force – general relativity in one statement	349
7. The new ideas on space, time and gravity	377
8. Motion in general relativity – bent light and wobbling vacuum	397
9. Why can we see the stars? – Motion in the universe	437
10. Black holes – falling forever	476
11. Does space differ from time?	491
12. General relativity in ten points – a summary for the layman	497
CHAPTER IV CLASSICAL ELECTRODYNAMICS	517
13. Liquid electricity, invisible fields and maximum speed	517
14. What is light?	558
15. Charges are discrete – the limits of classical electrodynamics	589
16. Electromagnetic effects and challenges	592
17. Classical physics in a nutshell – one and a half steps out of three	614
INTERMEZZO THE BRAIN, LANGUAGE AND THE HUMAN CONDITION	631
SECOND PART : QUANTUM THEORY – WHAT IS MATTER? WHAT ARE INTERACTIONS?	
CHAPTER V QUANTA OF LIGHT AND MATTER	704
18. Minimum action – quantum theory for poets and lawyers	704
19. Light – the strange consequences of the quantum of action	717
20. Motion of matter – beyond classical physics	735
21. Colours and other interactions between light and matter	753
CHAPTER VI PERMUTATION OF PARTICLES	771
22. Are particles like gloves?	771
23. Rotations and statistics – visualizing spin	780
CHAPTER VII DETAILS OF QUANTUM THEORY AND ELECTROMAGNETISM	793
24. Superpositions and probabilities – quantum theory without ideology	793
25. Applied quantum mechanics – life, pleasure and the means to achieve them	816

26. Quantum electrodynamics – the origin of virtual reality	854
27. Quantum mechanics with gravitation – the first approach	868
CHAPTER VIII INSIDE THE NUCLEUS	897
28. The structure of the nucleus – the densest clouds	897
29. The strong nuclear interaction and the birth of matter	921
30. The weak nuclear interaction and the handedness of nature	935
31. The standard model of elementary particle physics – as seen on television	940
32. Grand unification – a simple dream	941
CHAPTER IX ADVANCED QUANTUM THEORY (NOT YET AVAILABLE)	949
CHAPTER X QUANTUM PHYSICS IN A NUTSHELL	951
INTERMEZZO BACTERIA, FLIES AND KNOTS	969
THIRD PART : MOTION WITHOUT MOTION – WHAT ARE SPACE, TIME AND PARTICLES?	
CHAPTER XI GENERAL RELATIVITY VERSUS QUANTUM MECHANICS	996
33. Does matter differ from vacuum?	998
34. Nature at large scales – is the universe something or nothing?	1032
35. The physics of love – a summary of the first two and a half parts	1056
36. Maximum force and minimum distance – physics in limit statements	1068
37. The shape of points – extension in nature	1101
38. String theory – a web of dualities	1128
CHAPTER XII UNIFICATION (NOT YET AVAILABLE)	1137
CHAPTER XIII THE TOP OF THE MOUNTAIN (NOT YET AVAILABLE)	1139
FOURTH PART : APPENDICES	
APPENDIX A NOTATION AND CONVENTIONS	1142
APPENDIX B UNITS, MEASUREMENTS AND CONSTANTS	1154
APPENDIX C PARTICLE PROPERTIES	1174
APPENDIX D NUMBERS AND SPACES	1194
APPENDIX E SOURCES OF INFORMATION ON MOTION	1227
APPENDIX F CHALLENGE HINTS AND SOLUTIONS	1233
APPENDIX G LIST OF ILLUSTRATIONS	1284
APPENDIX H LIST OF TABLES	1298
APPENDIX I NAME INDEX	1301
APPENDIX J SUBJECT INDEX	1326
