

Contents

Contents	I
Physical Constants	1
1 Mechanics	2
1.1 Point-kinetics in a fixed coordinate system	2
1.1.1 Definitions	2
1.1.2 Polar coordinates	2
1.2 Relative motion	2
1.3 Point-dynamics in a fixed coordinate system	2
1.3.1 Force, (angular)momentum and energy	2
1.3.2 Conservative force fields	3
1.3.3 Gravitation	3
1.3.4 Orbital equations	3
1.3.5 The virial theorem	4
1.4 Point dynamics in a moving coordinate system	4
1.4.1 Apparent forces	4
1.4.2 Tensor notation	5
1.5 Dynamics of masspoint collections	5
1.5.1 The centre of mass	5
1.5.2 Collisions	5
1.6 Dynamics of rigid bodies	6
1.6.1 Moment of Inertia	6
1.6.2 Principal axes	6
1.6.3 Time dependence	6
1.7 Variational Calculus, Hamilton and Lagrange mechanics	6
1.7.1 Variational Calculus	6
1.7.2 Hamilton mechanics	7
1.7.3 Motion around an equilibrium, linearization	7
1.7.4 Phase space, Liouville's equation	7
1.7.5 Generating functions	8
2 Electricity & Magnetism	9
2.1 The Maxwell equations	9
2.2 Force and potential	9
2.3 Gauge transformations	10
2.4 Energy of the electromagnetic field	10
2.5 Electromagnetic waves	10
2.5.1 Electromagnetic waves in vacuum	10
2.5.2 Electromagnetic waves in matter	11
2.6 Multipoles	11
2.7 Electric currents	11
2.8 Depolarizing field	12
2.9 Mixtures of materials	12

3	Relativity	13
3.1	Special relativity	13
3.1.1	The Lorentz transformation	13
3.1.2	Red and blue shift	14
3.1.3	The stress-energy tensor and the field tensor	14
3.2	General relativity	14
3.2.1	Riemannian geometry, the Einstein tensor	14
3.2.2	The line element	15
3.2.3	Planetary orbits and the perihelion shift	16
3.2.4	The trajectory of a photon	17
3.2.5	Gravitational waves	17
3.2.6	Cosmology	17
4	Oscillations	18
4.1	Harmonic oscillations	18
4.2	Mechanic oscillations	18
4.3	Electric oscillations	18
4.4	Waves in long conductors	19
4.5	Coupled conductors and transformers	19
4.6	Pendulums	19
5	Waves	20
5.1	The wave equation	20
5.2	Solutions of the wave equation	20
5.2.1	Plane waves	20
5.2.2	Spherical waves	21
5.2.3	Cylindrical waves	21
5.2.4	The general solution in one dimension	21
5.3	The stationary phase method	21
5.4	Green functions for the initial-value problem	22
5.5	Waveguides and resonating cavities	22
5.6	Non-linear wave equations	23
6	Optics	24
6.1	The bending of light	24
6.2	Paraxial geometrical optics	24
6.2.1	Lenses	24
6.2.2	Mirrors	25
6.2.3	Principal planes	25
6.2.4	Magnification	25
6.3	Matrix methods	26
6.4	Aberrations	26
6.5	Reflection and transmission	26
6.6	Polarization	27
6.7	Prisms and dispersion	27
6.8	Diffraction	28
6.9	Special optical effects	28
6.10	The Fabry-Perot interferometer	29
7	Statistical physics	30
7.1	Degrees of freedom	30
7.2	The energy distribution function	30
7.3	Pressure on a wall	31
7.4	The equation of state	31
7.5	Collisions between molecules	32

7.6	Interaction between molecules	32
8	Thermodynamics	33
8.1	Mathematical introduction	33
8.2	Definitions	33
8.3	Thermal heat capacity	33
8.4	The laws of thermodynamics	34
8.5	State functions and Maxwell relations	34
8.6	Processes	35
8.7	Maximal work	36
8.8	Phase transitions	36
8.9	Thermodynamic potential	37
8.10	Ideal mixtures	37
8.11	Conditions for equilibrium	37
8.12	Statistical basis for thermodynamics	38
8.13	Application to other systems	38
9	Transport phenomena	39
9.1	Mathematical introduction	39
9.2	Conservation laws	39
9.3	Bernoulli's equations	41
9.4	Characterising of flows by dimensionless numbers	41
9.5	Tube flows	42
9.6	Potential theory	42
9.7	Boundary layers	43
	9.7.1 Flow boundary layers	43
	9.7.2 Temperature boundary layers	43
9.8	Heat conductance	43
9.9	Turbulence	44
9.10	Self organization	44
10	Quantum physics	45
10.1	Introduction to quantum physics	45
	10.1.1 Black body radiation	45
	10.1.2 The Compton effect	45
	10.1.3 Electron diffraction	45
10.2	Wave functions	45
10.3	Operators in quantum physics	45
10.4	The uncertainty principle	46
10.5	The Schrödinger equation	46
10.6	Parity	46
10.7	The tunnel effect	47
10.8	The harmonic oscillator	47
10.9	Angular momentum	47
10.10	Spin	48
10.11	The Dirac formalism	48
10.12	Atomic physics	49
	10.12.1 Solutions	49
	10.12.2 Eigenvalue equations	49
	10.12.3 Spin-orbit interaction	49
	10.12.4 Selection rules	50
10.13	Interaction with electromagnetic fields	50
10.14	Perturbation theory	50
	10.14.1 Time-independent perturbation theory	50
	10.14.2 Time-dependent perturbation theory	51

10.15 N-particle systems	51
10.15.1 General	51
10.15.2 Molecules	52
10.16 Quantum statistics	52
11 Plasma physics	54
11.1 Introduction	54
11.2 Transport	54
11.3 Elastic collisions	55
11.3.1 General	55
11.3.2 The Coulomb interaction	56
11.3.3 The induced dipole interaction	56
11.3.4 The centre of mass system	56
11.3.5 Scattering of light	56
11.4 Thermodynamic equilibrium and reversibility	57
11.5 Inelastic collisions	57
11.5.1 Types of collisions	57
11.5.2 Cross sections	58
11.6 Radiation	58
11.7 The Boltzmann transport equation	59
11.8 Collision-radiative models	60
11.9 Waves in plasma's	60
12 Solid state physics	62
12.1 Crystal structure	62
12.2 Crystal binding	62
12.3 Crystal vibrations	63
12.3.1 A lattice with one type of atoms	63
12.3.2 A lattice with two types of atoms	63
12.3.3 Phonons	63
12.3.4 Thermal heat capacity	64
12.4 Magnetic field in the solid state	65
12.4.1 Dielectrics	65
12.4.2 Paramagnetism	65
12.4.3 Ferromagnetism	65
12.5 Free electron Fermi gas	66
12.5.1 Thermal heat capacity	66
12.5.2 Electric conductance	66
12.5.3 The Hall-effect	67
12.5.4 Thermal heat conductivity	67
12.6 Energy bands	67
12.7 Semiconductors	67
12.8 Superconductivity	68
12.8.1 Description	68
12.8.2 The Josephson effect	69
12.8.3 Flux quantisation in a superconducting ring	69
12.8.4 Macroscopic quantum interference	70
12.8.5 The London equation	70
12.8.6 The BCS model	70

13 Theory of groups	71
13.1 Introduction	71
13.1.1 Definition of a group	71
13.1.2 The Cayley table	71
13.1.3 Conjugated elements, subgroups and classes	71
13.1.4 Isomorfism and homomorfism; representations	72
13.1.5 Reducible and irreducible representations	72
13.2 The fundamental orthogonality theorem	72
13.2.1 Schur's lemma	72
13.2.2 The fundamental orthogonality theorem	72
13.2.3 Character	72
13.3 The relation with quantum mechanics	73
13.3.1 Representations, energy levels and degeneracy	73
13.3.2 Breaking of degeneracy by a perturbation	73
13.3.3 The construction of a base function	73
13.3.4 The direct product of representations	74
13.3.5 Clebsch-Gordan coefficients	74
13.3.6 Symmetric transformations of operators, irreducible tensor operators	74
13.3.7 The Wigner-Eckart theorem	75
13.4 Continuous groups	75
13.4.1 The 3-dimensional translation group	75
13.4.2 The 3-dimensional rotation group	75
13.4.3 Properties of continuous groups	76
13.5 The group $SO(3)$	77
13.6 Applications to quantum mechanics	77
13.6.1 Vectormodel for the addition of angular momentum	77
13.6.2 Irreducible tensor operators, matrixelements and selection rules	78
13.7 Applications to particle physics	79
14 Nuclear physics	81
14.1 Nuclear forces	81
14.2 The shape of the nucleus	82
14.3 Radioactive decay	82
14.4 Scattering and nuclear reactions	83
14.4.1 Kinetic model	83
14.4.2 Quantum mechanical model for n-p scattering	83
14.4.3 Conservation of energy and momentum in nuclear reactions	84
14.5 Radiation dosimetry	84
15 Quantum field theory & Particle physics	85
15.1 Creation and annihilation operators	85
15.2 Classical and quantum fields	85
15.3 The interaction picture	86
15.4 Real scalar field in the interaction picture	86
15.5 Charged spin-0 particles, conservation of charge	87
15.6 Field functions for spin- $\frac{1}{2}$ particles	87
15.7 Quantization of spin- $\frac{1}{2}$ fields	88
15.8 Quantization of the electromagnetic field	89
15.9 Interacting fields and the S-matrix	89
15.10 Divergences and renormalization	90
15.11 Classification of elementary particles	90
15.12 P and CP-violation	92
15.13 The standard model	93
15.13.1 The electroweak theory	93
15.13.2 Spontaneous symmetry breaking: the Higgs mechanism	94

15.13.3 Quantumchromodynamics	94
15.14 Path integrals	95
15.15 Unification and quantum gravity	95
16 Astrophysics	96
16.1 Determination of distances	96
16.2 Brightness and magnitudes	96
16.3 Radiation and stellar atmospheres	97
16.4 Composition and evolution of stars	97
16.5 Energy production in stars	98
The ∇-operator	99
The SI units	100
