

# Contents

<b>1</b>	<b>Linear spaces; normed spaces; first examples</b>	<b>9</b>
1.1	Linear spaces . . . . .	9
1.2	Normed spaces; first examples . . . . .	11
1.2.1	Hölder inequality. . . . .	12
1.2.2	Minkowski inequality . . . . .	13
1.3	Completeness; completion . . . . .	16
1.3.1	Construction of completion . . . . .	17
1.4	Exercises . . . . .	18
<b>2</b>	<b>Hilbert spaces</b>	<b>21</b>
2.1	Basic notions; first examples . . . . .	21
2.1.1	Cauchy-Schwartz inequality . . . . .	22
2.1.2	Bessel's inequality . . . . .	23
2.1.3	Gram-Schmidt orthogonalization procedure . . . . .	24
2.1.4	Parseval's equality . . . . .	25
2.2	Projections; decompositions . . . . .	27
2.2.1	Separable case . . . . .	27
2.2.2	Uniqueness of the distance from a point to a convex set: the geometric meaning . . . . .	27
2.2.3	Orthogonal decomposition . . . . .	28
2.3	Linear functionals . . . . .	29
2.3.1	Linear functionals in a general linear space . . . . .	29
2.3.2	Bounded linear functionals in normed spaces. The norm of a functional . . . . .	31
2.3.3	Bounded linear functionals in a Hilbert space . . . . .	32
2.3.4	An Example of a non-separable Hilbert space: . . . . .	32
2.4	Exercises . . . . .	33

<b>3</b>	<b>The dual space <math>X^*</math></b>	<b>39</b>
3.1	Hahn-Banach theorem and its first consequences . . . . .	39
3.2	Dual Spaces . . . . .	41
3.3	Exercises: . . . . .	42
<b>4</b>	<b>Bounded linear operators</b>	<b>43</b>
4.1	Completeness of the space of bounded linear operators . . . . .	43
4.2	Examples of linear operators . . . . .	44
4.3	Compact operators . . . . .	45
4.3.1	Compact sets . . . . .	46
4.3.2	The space of compact operators . . . . .	48
4.4	Dual Operators . . . . .	48
4.5	Different convergences in the space $L(X)$ of bounded operators . . . . .	50
4.6	Invertible Operators . . . . .	52
4.7	Exercises . . . . .	52
<b>5</b>	<b>Spectral theory</b>	<b>57</b>
5.1	Classification of spectrum . . . . .	57
5.2	Fredholm Theory of compact operators . . . . .	58
5.3	Exercises . . . . .	63
<b>6</b>	<b>Self adjoint compact operators</b>	<b>65</b>
6.1	General Properties . . . . .	65
6.2	Exercises . . . . .	72
<b>7</b>	<b>Self-adjoint bounded operators</b>	<b>73</b>
7.1	Order in the space of symmetric operators . . . . .	73
7.1.1	Properties . . . . .	73
7.2	Projections (projection operators) . . . . .	77
7.2.1	Some properties of projections in linear spaces . . . . .	77
<b>8</b>	<b>Functions of operators</b>	<b>79</b>
8.1	Properties of this correspondence ( $\varphi_i \in K$ ) . . . . .	80
8.2	The main inequality . . . . .	82
8.3	Simple spectrum . . . . .	85
<b>9</b>	<b>Spectral theory of unitary operators</b>	<b>87</b>
9.1	Spectral properties . . . . .	87

<b>10 The Fundamental Theorems.</b>	<b>91</b>
10.1 The open mapping theorem . . . . .	92
10.2 The Closed Graph Theorem . . . . .	94
10.3 The Banach-Steinhaus Theorem . . . . .	95
10.4 Bases In Banach Spaces . . . . .	99
10.5 Hahn-Banach Theorem. Linear functionals . . . . .	100
10.6 Extremal points; The Krein-Milman Theorem . . . . .	108
<b>11 Banach algebras</b>	<b>111</b>
11.1 Analytic functions . . . . .	114
11.2 Radicals . . . . .	118
11.3 Involutions . . . . .	120
<b>12 Unbounded self-adjoint and symmetric operators in <math>H</math></b>	<b>127</b>
12.1 More Properties Of Operators . . . . .	131
12.2 The Spectrum $\sigma(A)$ . . . . .	132
12.3 Elements Of The “Graph Method” . . . . .	133
12.4 Reduction Of Operator . . . . .	134
12.5 Cayley Transform . . . . .	136
