

Contents

1	Fundamentals	9
1.1	A Little History	9
1.2	Why Bother With Complex Numbers and Functions?	11
1.3	What are Complex Numbers?	12
1.4	Some Soothing Exercises	18
1.5	Some Classical Jargon	22
1.6	The Geometry of Complex Numbers	26
1.7	Conclusions	29
2	Examples of Complex Functions	33
2.1	A Linear Map	34
2.2	The function $w = z^2$	36
2.3	The Square Root: $w = z^{\frac{1}{2}}$	46
2.3.1	Branch Cuts	49
2.3.2	Digression: Sliders	51
2.4	Squares and Square roots: Summary	58
2.5	The function $f(z) = \frac{1}{z}$	58

2.6	The Möbius Transforms	66
2.7	The Exponential Function	69
2.7.1	Digression: Infinite Series	70
2.7.2	Back to Real exp	73
2.7.3	Back to Complex exp and Complex ln	76
2.8	Other powers	81
2.9	Trigonometric Functions	82
3	C - Differentiable Functions	89
3.1	Two sorts of Differentiability	89
3.2	Harmonic Functions	97
3.2.1	Applications	100
3.3	Conformal Maps	102
4	Integration	105
4.1	Discussion	105
4.2	The Complex Integral	107
4.3	Contour Integration	113
4.4	Some Inequalities	119
4.5	Some Solid and Useful Theorems	120
5	Taylor and Laurent Series	131
5.1	Fundamentals	131
5.2	Taylor Series	134

5.3	Laurent Series	138
5.4	Some Sums	140
5.5	Poles and Zeros	143
6	Residues	149
6.1	Trigonometric Integrals	153
6.2	Infinite Integrals of rational functions	154
6.3	Trigonometric and Polynomial functions	159
6.4	Poles on the Real Axis	161
6.5	More Complicated Functions	164
6.6	The Argument Principle; Rouché's Theorem	168
6.7	Concluding Remarks	174
