Preface to the Fourth Edition	XI
Preface to the Third Edition	XV
Preface to the Second Edition	XVII
Preface to the First Edition	XIX
1 Basic Concepts	1
1.1. Introduction	1
1.2. Random Variables, Probability Distributions and Some Standard Notation ..	2
1.3. Characteristics of a Distribution: Mean, Median and Variance	8
2 Tests of Significance	11
2.1. Introduction	11
2.2. An Example	12
2.3. Common Features of Significance Tests	17
3 Fisher's Test for 2×2 Contingency Tables	19
3.1. Introduction	19
3.2. Details of the Test	19
3.3. Additional Examples of Fisher's Test	25
4 Approximate Significance Tests for Contingency Tables	28
4.1. Introduction	28
4.2. The χ^2 Test for 2×2 Tables	28
4.3. The χ^2 Test for Rectangular Contingency Tables	35
4.4. Using Statistical Tables of the χ^2 Probability Distribution	42
5 Some Warnings Concerning 2×2 Tables	46
5.1. Introduction	46
5.2. Combining 2×2 Tables	46
5.3. Matched Pairs Binary Data	51

6	Kaplan-Meier or ‘Actuarial’ Survival Curves	54
6.1.	Introduction	54
6.2.	General Features of the Kaplan-Meier Estimate	56
6.3.	Computing the Kaplan-Meier Estimate	62
6.4.	A Novel Use of the Kaplan-Meier Estimator	64
7	The Log-Rank or Mantel-Haenszel Test for the Comparison of Survival Curves	67
7.1.	Introduction	67
7.2.	Details of the Test	68
7.3.	Evaluating the Log-Rank Test – A Simple Example	71
7.4.	More Realistic Examples	74
8	An Introduction to the Normal Distribution	76
8.1.	Introduction	76
8.2.	Basic Features of the Normal Distribution	77
8.3.	The Normal Distribution and Significance Testing	81
8.4.	The Normal Distribution and Confidence Intervals	84
8.5.	Using Normal Tables	87
9	Analyzing Normally Distributed Data	90
9.1.	Introduction	90
9.2.	Some Preliminary Considerations	91
9.3.	Analyzing a Single Sample	96
9.4.	Comparisons Based on the Normal Distribution	100
9.5.	Testing the Equality of Variances	106
10	Linear Regression Models for Medical Data	111
10.1.	Introduction	111
10.2.	A Historical Note	112
10.3.	Multiple Linear Regression	113
10.4.	Correlation	118
10.5.	The Analysis of Variance	122
11	Binary Logistic Regression	128
11.1.	Introduction	128
11.2.	Logistic Regression	129
11.3.	Estimation in 2×2 Tables	131
11.4.	Reanalysis of a Previous Example	135
11.5.	The Analysis of Dose-Response Data	136
12	Regression Models for Count Data	141
12.1.	Introduction	141
12.2.	The Model for Poisson Regression	142
12.3.	An Experimental Study of Cellular Differentiation	145

13 Proportional Hazards Regression	149
13.1. Introduction	149
13.2. A Statistical Model for the Death Rate	150
13.3. The Lymphoma Example	152
13.4. The Use of Time-Dependent Covariates	157
14 The Analysis of Longitudinal Data	160
14.1. Introduction	160
14.2. Liang-Zeger Regression Models	161
14.3. Random Effects Models	164
14.4. Multi-State Models	167
15 Analysis of Variance	174
15.1. Introduction	174
15.2. Representing Categorical Information in Regression Models	175
15.3. Understanding Two-Factor Interactions	181
15.4. Revisiting the INR Study	183
16 Data Analysis	191
16.1. Introduction	191
16.2. Quality Data	191
16.3. Initial or Exploratory Analysis	193
16.4. Primary Analysis	196
16.5. Secondary Analyses	200
16.6. A Formal Discussion of Multiple Comparisons	202
16.7. False Discovery Rates	206
17 The Question of Sample Size	207
17.1. Introduction	207
17.2. General Aspects of Sample Size Calculations	207
17.3. Two Examples of Sample Size Calculations	211
17.4. Some Hazards of Small Studies	214
18 The Design of Clinical Trials	217
18.1. Introduction	217
18.2. General Considerations	217
18.3. Trial Organization	220
18.4. Randomized versus Historical Controls	222
18.5. Intention to Treat	227
18.6. Factorial Designs	228
18.7. Repeated Significance Testing	228
18.8. Sequential Analysis	230
19 Further Comments Regarding Clinical Trials	234
19.1. Introduction	234
19.2. Surrogate Endpoints	234

19.3. Active Control or Equivalence Trials	236
19.4. Other Designs	237
19.5. Multiple Outcomes	239
19.6. Multiple Treatment Arms	242
19.7. Sequential Designs for Efficacy-Toxicity Trials	244
19.8. Stochastic Curtailment	250
20 Meta-Analysis	254
20.1. Introduction	254
20.2. Background	255
20.3. Study Heterogeneity	256
20.4. An Illustrative Example	257
20.5. Graphical Displays	260
20.6. Sensitivity	262
21 Epidemiological Applications	263
21.1. Introduction	263
21.2. Epidemiological Studies	263
21.3. Relative Risk Models	264
21.4. Odds Ratio Models	268
21.5. Confounding and Effect Modification	270
21.6. Mantel-Haenszel Methodology	273
21.7. Poisson Regression Models	275
21.8. Clinical Epidemiology	280
22 Diagnostic Tests	282
22.1. Introduction	282
22.2. Some General Considerations	282
22.3. Sensitivity, Specificity, and Post-Test Probabilities	286
22.4. Likelihood Ratios and Related Issues	292
23 Agreement and Reliability	298
23.1. Introduction	298
23.2. Intraclass Correlation Coefficient	300
23.3. Assessing Agreement	303
23.4. The Kappa Coefficient	304
23.5. Weighted Kappa	306
23.6. Measures of Agreement for Discrete Data	307
23.7. The Dependence of κ on Prevalence	308
References	310
Subject Index	314
