

CONTENTS.

CONTENTS.	3.
CHAPTER I. PRELIMINARY INFORMATION.	4.
§ 1. Geometrical and physical vectors.	4.
§ 2. Bound vectors and free vectors.	5.
§ 3. Euclidean space.	8.
§ 4. Bases and Cartesian coordinates.	8.
§ 5. What if we need to change a basis?	12.
§ 6. What happens to vectors when we change the basis?	15.
§ 7. What is the novelty about vectors that we learned knowing transformation formula for their coordinates?	17.
CHAPTER II. TENSORS IN CARTESIAN COORDINATES.	18.
§ 8. Covectors.	18.
§ 9. Scalar product of vector and covector.	19.
§ 10. Linear operators.	20.
§ 11. Bilinear and quadratic forms.	23.
§ 12. General definition of tensors.	25.
§ 13. Dot product and metric tensor.	26.
§ 14. Multiplication by numbers and addition.	27.
§ 15. Tensor product.	28.
§ 16. Contraction.	28.
§ 17. Raising and lowering indices.	29.
§ 18. Some special tensors and some useful formulas.	29.
CHAPTER III. TENSOR FIELDS. DIFFERENTIATION OF TENSORS. ...	31.
§ 19. Tensor fields in Cartesian coordinates.	31.
§ 20. Change of Cartesian coordinate system.	32.
§ 21. Differentiation of tensor fields.	34.
§ 22. Gradient, divergency, and rotor. Laplace and d'Alambert operators.	35.
CHAPTER IV. TENSOR FIELDS IN CURVILINEAR COORDINATES.	38.
§ 23. General idea of curvilinear coordinates.	38.
§ 24. Auxiliary Cartesian coordinate system.	38.
§ 25. Coordinate lines and the coordinate grid.	39.
§ 26. Moving frame of curvilinear coordinates.	41.
§ 27. Dynamics of moving frame.	42.
§ 28. Formula for Christoffel symbols.	42.
§ 29. Tensor fields in curvilinear coordinates.	43.
§ 30. Differentiation of tensor fields in curvilinear coordinates.	44.
§ 31. Concordance of metric and connection.	46.
