

# Table of Contents

<b>Foreword</b> .....	<b>xii</b>
<b>Preface</b> .....	<b>xiv</b>
<b>Acknowledgment</b> .....	<b>xxiii</b>
<b>About the Author</b> .....	<b>xxiv</b>

## **Section I: Principles and Backgrounds**

### **Chapter I**

<b>Geometric Modelling and Computer-Aided Design</b> .....	<b>1</b>
<i>Introduction to Geometric Modelling</i> .....	2
<i>Geometric Modelling Approaches</i> .....	2
<i>Wire-Frame Modelling</i> .....	2
<i>Surface Modelling</i> .....	6
<i>Solid Modelling</i> .....	11
<i>Computer-Aided Design</i> .....	17
<i>CAD System Architecture</i> .....	17
<i>Computer Hardware for CAD</i> .....	27
<i>Conclusion</i> .....	29
<i>References</i> .....	30

### **Chapter II**

<b>CAD Data Exchange and CAD Standards</b> .....	<b>32</b>
<i>Issues at Hand</i> .....	33
<i>CAD Kernels</i> .....	33

<i>Data Interoperability</i> .....	35
<i>Different Types of Data Translation/Conversion</i> .....	35
<i>Dual Kernel CAD Systems</i> .....	36
<i>Direct Data Translators</i> .....	36
<i>Common/Neutral Translators</i> .....	38
<i>Discussions</i> .....	48
<i>Comparing Data Exchange Methods</i> .....	49
<i>Data Quality</i> .....	49
<i>Conclusion</i> .....	50
<i>References</i> .....	51

### **Chapter III**

#### **Computer-Aided Process Planning and Manufacturing ..... 54**

<i>Computer-Aided Process Planning</i> .....	55
<i>Basic Steps in Developing a Process Plan</i> .....	55
<i>Principal Process Planning Approaches</i> .....	61
<i>Computer-Aided Manufacturing</i> .....	67
<i>Computer Applications in a Manufacturing Plant</i> .....	68
<i>Key Aspects of CAM in a Manufacturing System</i> .....	69
<i>Manufacturing Control</i> .....	71
<i>Conclusion</i> .....	72
<i>References</i> .....	73

### **Chapter IV**

#### **Feature Technology ..... 75**

<i>Feature Definition</i> .....	76
<i>Feature Taxonomy</i> .....	77
<i>Feature Representation Schemes</i> .....	83
<i>Surface Features vs. Volumetric Features</i> .....	83
<i>Feature-Based Methodologies</i> .....	86
<i>Conclusion</i> .....	88
<i>References</i> .....	88

### **Chapter V**

#### **Feature Recognition ..... 90**

<i>Basic Concepts of Feature Recognition</i> .....	91
<i>Classification of Feature Recognition Systems</i> .....	91
<i>Feature Detection</i> .....	92
<i>Feature Generation</i> .....	96
<i>Some Issues on Feature Recognition</i> .....	99
<i>Concavity/Convexity of a Geometric Entity</i> .....	99
<i>Optimal Interpolation of Machinable Volumes</i> .....	103
<i>Consideration of Blanks</i> .....	105

<i>Conclusion</i> .....	106
<i>References</i> .....	107

## **Chapter VI**

<b>Feature Interactions</b> .....	<b>109</b>
<i>Surface Feature Interactions</i> .....	110
<i>Surface Features</i> .....	110
<i>Classification of Surface Feature Interactions</i> .....	110
<i>Overlapping Features</i> .....	111
<i>Significance of Surface Feature Interactions</i> .....	115
<i>Volumetric Feature Interactions</i> .....	116
<i>Volumetric Features</i> .....	116
<i>Significance of Feature Interactions</i> .....	119
<i>Indirect Feature Interactions</i> .....	120
<i>A Case Study</i> .....	120
<i>Conclusion</i> .....	124
<i>References</i> .....	124

## **Chapter VII**

<b>Integrated Feature Technology</b> .....	<b>126</b>
<i>Integration Versus Interfacing</i> .....	126
<i>Integrated Feature Recognition</i> .....	129
<i>Machining Volumes for Different Operations</i> .....	129
<i>Features for Finishing Operations</i> .....	130
<i>Intermediate Workplace</i> .....	131
<i>Machining Requirements</i> .....	131
<i>Dealing with Fuzzy Information</i> .....	135
<i>Making Decisions Based on Fuzzy Data</i> .....	139
<i>An Example</i> .....	140
<i>Machining Allowances for Different Cuts</i> .....	142
<i>A Case Study</i> .....	142
<i>Determining Machining Features from a FBD Model</i> .....	146
<i>Mapping Design Features to Machining Features</i> .....	149
<i>Feature Mapping</i> .....	152
<i>Machining Features and Cutting Tools</i> .....	154
<i>Cutting Tool Classification</i> .....	154
<i>Mapping Design Features to Cutting Tools</i> .....	155
<i>Conclusion</i> .....	161
<i>References</i> .....	162

## **Chapter VIII**

<b>CNC Machine Tools</b> .....	<b>165</b>
<i>A Historical Perspective</i> .....	166

<i>Principles of Numerical Control</i> .....	166
<i>Typical CNC Machine Tools</i> .....	167
<i>Machining Capabilities of a CNC Machine</i> .....	168
<i>Vertical Machining Centres</i> .....	168
<i>Horizontal Machining Centres</i> .....	169
<i>Tooling for CNC Machine Tools</i> .....	170
<i>Material for Cutting Tools</i> .....	170
<i>Tooling Systems</i> .....	172
<i>Automatic Tool Changer System</i> .....	172
<i>Principal Elements of a CNC Machine Tool</i> .....	174
<i>Machine Base</i> .....	175
<i>Machine Spindles</i> .....	176
<i>Spindle Drives</i> .....	176
<i>Slide Drives</i> .....	177
<i>Direct Numerical Control</i> .....	178
<i>Designation of Axis and Motion of CNC Machines</i> .....	179
<i>Z Axis of Motion</i> .....	179
<i>X Axis of Motion</i> .....	180
<i>Y Axis of Motion</i> .....	180
<i>Rotary Motions A, B, and C</i> .....	180
<i>Origin of the Standard Coordinate System</i> .....	180
<i>Additional Axes</i> .....	181
<i>Direction of Spindle Rotation</i> .....	183
<i>Some Schematics of CNC Machine Tools</i> .....	183
<i>Parallel Machine Tools: A Little “Sidetrack”</i> .....	184
<i>Conclusion</i> .....	186
<i>References</i> .....	187
<i>Endnote</i> .....	187

## **Chapter IX**

<b>Program CNCs</b> .....	<b>188</b>
<i>Program Basics</i> .....	189
<i>Program Format</i> .....	189
<i>NC Words</i> .....	189
<i>Other Controllable Functions</i> .....	192
<i>Coordinate System and Program Zero</i> .....	192
<i>Coordinate System</i> .....	192
<i>Plus and Minus</i> .....	192
<i>Program Zero</i> .....	193
<i>Absolute vs. Incremental</i> .....	194
<i>Compensations</i> .....	194
<i>Offsets</i> .....	195

<i>Organization of Offsets</i> .....	196
<i>Wear Offsets vs. Geometry Offsets</i> .....	196
<i>Instate an Offset</i> .....	196
<i>Offsets and Trial Machining</i> .....	196
<i>Tool Length Compensation</i> .....	197
<i>Cutter Radius Compensation</i> .....	198
<i>Programming Methods for Interpolation</i> .....	201
<i>Linear Interpolation</i> .....	201
<i>Circular Interpolation</i> .....	201
<i>Parabolic Interpolation</i> .....	203
<i>Summary of Some Common NC Codes</i> .....	204
<i>Lists of Some Common G Codes</i> .....	204
<i>Reset States</i> .....	204
<i>Lists of Some Common M Codes</i> .....	208
<i>Examples of NC Programs</i> .....	208
<i>Programming Hole-Making Operations</i> .....	208
<i>Programming Linear Profiles</i> .....	209
<i>Programming Circular Profiles</i> .....	209
<i>Contemporary Approach to Part Programming</i> .....	210
<i>Automatically Programmed Tools (APT)</i> .....	212
<i>CAD/CAM Approach</i> .....	226
<i>Conclusion</i> .....	228
<i>References</i> .....	229

## **Section II: Integration and Implementations**

### **Chapter X**

<b>Integration of CAD/CAPP/CAM/CNC</b> .....	<b>231</b>
<i>Models of Integrating CAD/CAPP/CAM/CNC</i> .....	232
<i>A Case Study of Integrating CAD/CAPP/CAM</i> .....	232
<i>Concurrent Product Modelling in a CAD/CAM System</i> .....	232
<i>A Bird's-Eye View of the Case Study</i> .....	233
<i>CAD/CAM Enabling a Concurrent Environment</i> .....	236
<i>Reflections</i> .....	237
<i>Limited Efforts to Integrate CAM and CNC</i> .....	237
<i>Post-Processor: A Source of Vexation</i> .....	238
<i>Challenges</i> .....	238
<i>The APT Effort</i> .....	239
<i>The BCL Effort</i> .....	240
<i>The BNCL Effort</i> .....	241
<i>Intermediate Languages for CNC Programming</i> .....	243

<i>Conclusion</i> .....	243
<i>References</i> .....	244
<i>Endnote</i> .....	245

## **Chapter XI**

<b>Integration Based on STEP Standards</b> .....	<b>246</b>
<i>Data Exchange Using STEP and STEP-NC</i> .....	247
<i>Data Exchange between CAD Systems</i> .....	248
<i>Data Flow between CAD, CAPP, CAM and CNC Systems</i> .....	248
<i>Features as a Common Thread</i> .....	249
<i>Integration through STEP AP Harmonization</i> .....	251
<i>Integrate CAD with CAPP</i> .....	252
<i>Integrate CAPP with CAM</i> .....	252
<i>Integrate CAM with CNC</i> .....	254
<i>STEP-NC Data Model</i> .....	255
<i>Data Access Implementation Methods</i> .....	255
<i>Conclusion</i> .....	261
<i>References</i> .....	262

## **Chapter XII**

<b>Function Block-Enabled Integration</b> .....	<b>266</b>
<i>Function Block Structure</i> .....	266
<i>Function Block-Enabled CAD/CAPP/CAM Integration</i> .....	269
<i>Integrating CAM with CNC</i> .....	270
<i>Model-View-Control Design Pattern</i> .....	270
<i>Software Implementation FBDK and FBRT</i> .....	271
<i>Layered Architecture of the CNC System</i> .....	273
<i>The Prototype CNC System</i> .....	275
<i>Conclusion</i> .....	280
<i>References</i> .....	281

## **Chapter XIII**

<b>Development of an Integrated, Adptable CNC System</b> .....	<b>283</b>
<i>Task-Level Data vs. Method-Level Data</i> .....	283
<i>Generate a Native STEP-NC Program</i> .....	284
<i>Modelling Native Machining Facilities</i> .....	285
<i>STEP-NCMtDm</i> .....	287
<i>An Adaptor</i> .....	290
<i>STEP-NC Pre-Processor</i> .....	290
<i>STEP-NC Encoder</i> .....	290
<i>Funtion Block Mapping Unit</i> .....	292
<i>Human-Machine Interface</i> .....	293
<i>Conclusion</i> .....	295
<i>References</i> .....	295

<b>Chapter XIV</b>	
<b>Integrating CAD/CAPP/CAM/CNC with Inspections .....</b>	<b>297</b>
<i>Closed-Loop Machining and On-Machine Inspection.....</i>	297
<i>Past Research.....</i>	298
<i>A Data Model for OMI.....</i>	299
<i>An Integrated Machining and Inspection System .....</i>	304
<i>Implementation .....</i>	306
<i>Conclusion .....</i>	309
<i>References .....</i>	310

<b>Chapter XV</b>	
<b>Internet-Based Integration.....</b>	<b>311</b>
<i>A Collaborative Framework .....</i>	312
<i>System Model .....</i>	313
<i>Client Tier: User Interface.....</i>	314
<i>Business Logic Tier: CAPP Server .....</i>	316
<i>Data Tier: Data Model.....</i>	318
<i>Framework Development.....</i>	319
<i>Client Tier Implementation .....</i>	319
<i>Business Logic Tier Implementation.....</i>	320
<i>Data Tier Implementation .....</i>	320
<i>Conclusion .....</i>	323
<i>References .....</i>	324

<b>Chapter XVI</b>	
<b>From CAD/CAPP/CAM/CNC to PDM, PLM and Beyond.....</b>	<b>326</b>
<i>PDM's Capabilities.....</i>	327
<i>Evolution of PDM Methodology .....</i>	328
<i>Benefits of PDM Systems .....</i>	329
<i>Interdisciplinary Collaboration .....</i>	329
<i>Reduced Product Development Cycle Time .....</i>	329
<i>Reduced Complexity of Accessing the Information of Company .....</i>	329
<i>Improved Product Management.....</i>	329
<i>Improved Lifecycle Design.....</i>	330
<i>Supply-Chain Collaboration.....</i>	330
<i>Web-Based PDM .....</i>	330
<i>Tiered-Architecture.....</i>	331
<i>Similarities between Web-Technology and PDM Methodology.....</i>	331
<i>Capability Improvements .....</i>	332
<i>Further Challenges .....</i>	334
<i>PDM Standardization .....</i>	334
<i>Integrated and Extended PDM .....</i>	337
<i>Product Lifecycle Management .....</i>	338
<i>Definition of PLM.....</i>	338

<i>PLM Solution Model</i> .....	340
<i>Benefits of PLM</i> .....	341
<i>PLM Implementation</i> .....	341
<i>PLM Standardization</i> .....	343
<i>Share-A-Space: PLM in Practice</i> .....	345
<i>Looking Forward to “Grand” Integration</i> .....	347
<i>People-Paper Technique</i> .....	348
<i>File-Transfer Technique</i> .....	348
<i>API Programs</i> .....	348
<i>Distributed Objects</i> .....	348
<i>Conclusion</i> .....	350
<i>References</i> .....	351

## **Chapter XVII**

<b>Key Enabling Technologies</b> .....	<b>354</b>
<i>Knowledge-Based Systems</i> .....	355
<i>Expert Systems Technology</i> .....	355
<i>Expert Systems Development Approaches</i> .....	356
<i>Knowledge in Product Design and Manufacturing</i> .....	357
<i>Applications of Expert Systems</i> .....	359
<i>Artificial Neural Network Methods</i> .....	362
<i>Introduction to Neural Nets</i> .....	362
<i>ANN Used in Feature Technologies</i> .....	363
<i>ANN Used for Process Planning</i> .....	366
<i>Genetic Algorithm</i> .....	369
<i>Implementation Procedure of Genetic Algorithm</i> .....	370
<i>Applications of Genetic Algorithm</i> .....	372
<i>Agent-Based Technology</i> .....	375
<i>Basics of Agents</i> .....	376
<i>Applications of Agent Technology</i> .....	377
<i>Other Technologies</i> .....	381
<i>Fuzzy Logic</i> .....	381
<i>Petri Nets</i> .....	382
<i>Ant Colony Optimization</i> .....	382
<i>Conclusion</i> .....	383
<i>References</i> .....	383

<b>Index</b> .....	<b>394</b>
--------------------	------------

## Foreword

The late Dr. M. Eugene Merchant, then director of research planning of Cincinnati Milacron Inc., made an interesting Delphi-type technological forecast of the future of production engineering at the General Assembly of CIRP in 1971. Five years later, he made another report on the “Future Trends in Manufacturing – Towards the Year 2000” at the 1976 CIRP GA. He reported that between now (1976) and the then (2000), the overall future trend in manufacturing will be towards the implementation of the computer-integrated automatic factories. More than 30 years have since whisked past, most heartedly, manufacturing technology had progressed even faster than Dr. Merchant’s prediction.

One of the forerunners of automated manufacturing is the CAD/CAM technology which had made its debut more than 30 years ago. Numerous research papers and books have since been written on the topic. As new technologies constantly emerge and efficient IT tools, and faster and affordable computing facilities become more pervasive, the demand for updating the development of this field is clear. The author of this book has put together a comprehensive perspective of computer-aided design, manufacturing and numerical control, addressing their retrospective developments, present state-of-the-art review and future trends and directions.

Design, in particular, underpins all manufacturing activities at an early stage of a product development process. The design stage is well known to have the capability of locking in most of the subsequent costs, and any changes made will prove to be unwise and expensive. Concurrent engineering has provided a solution to this problem to some extent, but not a panacea. The intricacy and interactions of all the related activities, such as business needs, time-to-market requirement, ecological aspects of manufacturing, and so forth, would need to be thoroughly understood. This book has elucidated many connected aspects of automated manufacturing such as CAD, CNC, CAD/CAM, CAPP, STEP, PDM, PLM, expert systems, evolutionary computing techniques, and so forth, in a single volume. In particular, the theoretical and practical aspects of these technologies, which may be integrated effectively, have been addressed. It provides an invaluable updated text and reference for senior students,
