

# CONTENTS

<b>Preface</b>	<b>5</b>
<b>1. General Fundamentals</b>	
1.1 Basic Concepts	7
1.2 A few properties of groups and graphs	8
1.3 Lattices and its properties	11
<b>2. Loops and its properties</b>	
2.1 Definition of loop and examples	15
2.2 Substructures in loops	17
2.3 Special identities in loops	22
2.4 Special types of loops	23
2.5 Representation and isotopes of loops	29
2.6 On a new class of loops and its properties	31
2.7 The new class of loops and its application to proper edge colouring of the graph $K_{2n}$	40
<b>3. Smarandache Loops</b>	
3.1 Definition of Smarandache loops with examples	47
3.2 Smarandache substructures in loops	51
3.3 Some new classical S-loops	56
3.4 Smarandache commutative and commutator subloops	61
3.5 Smarandache associativity and associator subloops	67
3.6 Smarandache identities in loops	71
3.7 Some special structures in S-loops	74
3.8 Smarandache mixed direct product loops	78
3.9 Smarandache cosets in loops	84
3.10 Some special type of Smarandache loops	91
<b>4. Properties about S-loops</b>	

4.1	Smarandache loops of level II	93
4.2	Properties of S-loop II	98
4.3	Smarandache representation of a finite loop L	99
4.4	Smarandache isotopes of loops	102
4.5	Smarandache hyperloops	103
<b>5.</b>	<b>Research problems</b>	<b>107</b>
	<b>References</b>	<b>113</b>
	<b>Index</b>	<b>119</b>
