I HISTOLOGY AND PHYSIOLOGY OF BONE TISSUE

I - BONE TISSUE.....	15
1. Osteoblasts.....	15
2. Osteocytes.....	15
3. Osteoclasts.....	16
4. Intercellular bone substance.....	16
4.1 Organic composition of intercellular bone substance.....	16
4.2 Non-organic composition of intercellular bone substance.....	17
5. Histological structure of bone.....	17
5.1 Cortical bone.....	17
5.2 Cancellous bone.....	18
5.3 Periosteum.....	18
5.4 Endosteum.....	19
5.5 Medullar cavity.....	19
6. Bone vascularisation.....	19
6.1 Sources for long bone vascularization.....	20
6.1.1. Nutrient artery.....	20
6.1.2. Perforate arteries of metaphysis and epiphysis.....	20
6.1.3. Periosteal blood vessels.....	22
6.2 Mechanism of blood circulation in bones.....	22
II - WAR WOUND.....	23
1. History of war wound treatment.....	23
1.1 War wound.....	25
2. Missile ballistics.....	26
2.1 Phenomena of the projectile motion through the air.....	27
2.1.1. Missiles of low initial velocity.....	27
2.1.2. Missiles of high initial velocity.....	28
3. Morphology of the war wound.....	29
3.1 Classification of the war wounds.....	29
3.2 Missile track.....	30
3.2.1. Central zone.....	31
3.2.2. Zone of massive blow.....	31
3.2.3. Zone of molecular blow.....	31
III - TREATMENT OF THE OPEN WOUNDS OF LIMBS.....	32
1.1. Cleaning of the wound.....	32
1.2. Primary surgical management of the wound.....	32
1.3. Primary surgical management of the bone tissue.....	33
2. Classification of open fractures in war wounds.....	34
3. Classification of open fractures in peace-time wound.....	35

3.1 Sum of the severity limbs injuries	36
4. Factors influencing osteogenesis in war wound and peace-time wound	37
4.1. Influence of compression and stability of bone fragments on osteogenesis	37
4.2. Degree of stability of bone fragments for healing	38
4.3. Fracture healing with regard to the fracture type and method of stabilization	39
4.4. Importance of bone vascularization for bone healing following internal and external fixation	41
4.5. Primary healing of soft tissue	41
4.6. Secondary healing of soft tissue	42
5. Radiological assessment of bone callus	43
5.1. Primary osseous consolidation	43
5.2. Secondary osseous consolidation	44
IV - STABILISATION OF BONE FRAGMENTS IN WAR- AND PEACE-TIME TRAUMA	46
1. Traction / Extension	47
2. Plaster of Paris immobilization / Casting	47
3. External fixation	47
3.1. Indications for external fixation	48
3.2. Biomechanics of the external fixation	49
V - LATE COMPLICATIONS OF OPEN FRACTURES	51
1. Delayed union - prolonged healing	51
2. Nonunions - Pseudoarthrosis	52
2.1. Classification of nonunions - pseudoarthroses	53
2.1.1. Hypervascular pseudoarthrosis	53
2.1.2. Avascular pseudoarthrosis	54
VI - BONE DEFECT	57
1. History of bone loss management	57
2. Causes to bone defect	60
3. Extent of bone defect	60
VII - AUTOGENOUS BONE GRAFTING	62
Introduction	62
1. Biological principles of autogenous bone grafting	63
1.1. Vascularity of the host site	63
1.1.1. Highly osteogenic site	63
1.1.2. Partially osteogenic site	63
1.1.3. Non-osteogenic site	63
1.2. Stability of the host site	63
1.3. Phases of autogenous bone graft healing	64
2. Early or inflammation phase	64
2.1. First osteogenic phase	64
2.2. Second (induction) osteogenic phase	65
2.3. Formation of woven bone	65
2.4. Formation of lamellar bone	65
2.5. Haversian remodeling	65

3. Transplantation and bone immunology	65
3.1. Altering rejection response	66
VIII - TYPES OF AUTOGENOUS BONE GRAFTS	68
1. Cancellous bone autograft	68
1.1 Biology of cancellous graft incorporation	68
2. Cortical bone autograft	69
3. Cortico-cancellous autogenous graft	71
3.1. Particled cancellous and cortical grafts	72
4. Anatomical areas of donor sites and technique for harvesting a cortical-cancellous graft	73
4.1. Harvesting autogenous graft from iliac bone	73
4.2. Obtaining cancellous bone graft	74
4.3. Obtaining cortical-cancellous, mono-cortical, bi-cortical and three- cortical autogenous graft from the iliac bone	74
4.4. Morbidity of the iliac crest following graft harvesting	74
4.5. Harvesting graft from trochanter major femoris, femoral and tibial condyles, malleoli, olecranon and distal radius	75
4.6. Obtaining rib autograft	76
4.7. Obtaining cortical fibular graft	76
4.8. Intraoperative treatment of autogenous grafts	77
5. Early autogenous bone grafting of the bone defects	77
5.1. Technique for early autogenous bone grafting in war wound	78
5.2. Post-operative follow up	79
Summary of the primary bone grafting in war wound	80
References	82

II DISTRACTION OSTEOGENESIS

1. Introduction	87
2. Distraction osteogenesis	89
2.1. Corticotomy	90
2.2. Traction epyphyseolysis	90
2.3. Latency	91
2.4. Rate	91
2.5. Rhythm	91
2.6. Transformational osteogenesis	92
2.7. Bone transportation	92
2.8. Healing index	93
3. Hystology of the distraction osteogenesis	94
4. Physiology of the distraction osteogenesis	94
5. Patophysiology of the distraction osteogenesis	95
6. Mode of application for pins and wires of external fixator	95
6.1. Application of the pin	95
6.2. Pin infection	97
6.3. Application of wires	97
6.3.1. Application of fixator with wires on upper arm	98

6.3.2. Application of the fixator with wires on forearm	99
6.3.3. Application of the fixator with wires on upper leg.....	99
6.3.4. Application of the fixator with wires on lower leg.....	100
7. Segmental bone transport by distraction callus.....	101
7.1. Segmental bone transport by AO external fixator and Schanz pins.....	102
7.2. Segmental bone transport with thread of AO external fixator frame	103
7.3. Segmental bone transport with traction wire of the external fixator with pins.....	103
7.4. Segmental bone transport with Mitkovich M 20 external fixator and a traction wire	104
7.5. Segmental bone transport with unthreaded medullar pin.....	104
7.6. Segmental bone transport with external fixator with wires and using crossed Kirschner wires	105
7.7. Segmental bone transport with external fixator with wires using Kirschner wires with olives	106
7.8. Bone shortening and callus distraction	106
8. Pseudoarthroses and distraction osteogenesis	107
8.1. Stiffed (hypertrophic) pseudoarthroses	107
8.2. Loose (atrophic) pseudoarthrosis.....	108
8.3. Pseudoarthrosis , contractures and distraction osteogenesis	108
8.4. Distraction arthrodesis.....	109
9. Deformities and distraction osteogenesis.....	110
10. Limb inequality, low growth and distraction osteogenesis.....	111
References	113

III VASCULAR AUTOGENOUS BONE GRAFTS

Introduction	119
I - Vascular bone autografts.....	120
1. Host site in transplantation of the vascular bone autografts.....	120
2. Stabilization of vascular graft.....	120
3. Incorporation of vascular graft.....	120
4. Fracture of vascular graft.....	121

II - ADVANTAGES OF VASCULARIZED AUTOGRAFTS IN COMPARISON TO OTHER AUTOGENOUS GRAFTS	122
---	-----

III - VASCULARIZED AUTOGENOUS BONE GRAFTS.....	123
--	-----

1. Muscle pedicled autograft	123
2. Vascular pedicled bone autograft	124
3. Free vascularized bone graft.....	124
3.1. Free vascularized bone graft of iliac crest	125
3.2. Free vascularized fibular graft	125
3.3. Free vascularized rib graft.....	127
3.4. Free vascularized graft of distal radius	127

IV - COMPLICATIONS OF THE VASCULARIZED GRAFT	128
--	-----

1. Complications of the donor site	128
2. Complications of the host site	128
References	129

IV - EXTERNAL FIXATION

1.0. External fixation.....	133
1.1. Indications for external fixation.....	134
1.2. Method of application.....	135
1.3. Place of application.....	136
2.0. Complications to external fixation.....	136
2.1. Vascular injuries.....	137
2.2. Lesions of nerves.....	137
2.3. Delayed healing.....	137
2.4. Contractures and limited function of the joint with external fixation.....	137
2.5. External fixation and amputation.....	138
3.0. Mitkovitsh fixator - M 20.....	138
3.1. Stabilization of the bone fragments in war wounds.....	141
3.2. Treatment of war wounds of the humerus with the Mitkovitsh fixator.....	141
3.3. The elbow.....	143
3.4. The forearm.....	144
3.5. The hand.....	145
3.6. The pelvis.....	145
3.7. The hip.....	147
3.7.1. Epiphysiolysis of the femoral head.....	148
3.8. The femoral shaft.....	149
3.9. The knee.....	149
3.10. The lower leg.....	151
3.11. The ankle.....	152
3.12. The foot.....	153
3.13. The spine.....	154
4.0. Ilizarov external fixator.....	155
5.0. Hoffman's external fixator.....	156
6.0. Volkov-Oganesian external fixator.....	157
6.1. Ortofix.....	158
7.0. Chamley fixator.....	158
8.0. AO - external fixator (Asif tubular).....	159
9.0. Shearer external fixator.....	159
10. "VMA Belgrade" external fixator.....	160
11. Kotajev fixator.....	160
13. Aesculap-Stuhler-Heise fixator.....	160
14. Franch war fixator.....	161
15. Mono - tube external fixator.....	161
16. Saba - coombs.....	162
17. Heidelberg external fixator.....	162
18. Mitkovitsh fixator M.9.....	162
19. Instrumentaria "Zagreb".....	163
References.....	164
