About the Authors	vii
Acknowledgments	ix
Foreword	xxiii
Introduction	1
Chapter 1: Introduction to Microsoft Access	7
Why Use Microsoft Access?	7
Is Access the Only Database I'll Ever Need?	8
Microsoft Access	8
MSDE	8
SQL Server	9
Automating Microsoft Access Without VBA Code	10
The Database Wizard	10
Creating a Switchboard for Your Database	13
Begin at the Beginning	14
Create a Switchboard through the Switchboard Manager	19
Add and Configure Controls Using Wizards	20
Building Automation into Your Project	21
Using Expression Builder	22
Using the Macro Builder	23
Using the Code Builder	24
Summary	25
Chapter 2: Access, VBA, and Macros	27
VBA within Access	27
Writing Code within Modules	27
VBA versus Macros in Access	29
Macros in Access 2003	30
Advantages to Using VBA over Macros	34
Summary	35
Chapter 3: New Features in Access 2003 (and 2002)	37
Easy Upgrading	37
Database Structure and Management Tools for Developers	38

Contents

Find Object Dependencies	38
Form/Report Error Checking	40
Propagate Field Properties	42
Customize SQL Font	43
Get Context-Sensitive SQL Help	44
Backup Database/Project	46
Sorting Option on Lookup Wizard	47
Copy and Paste Linked Table as Local Table	47
Notable Mention	49
New Wizards and Builders and Managers	51
A Wizard for Every Occasion	52
Available Builders	52
Managers	53
Changes to Jet	53
Service Pack 8	53
Security and Related Features	54
What Is Macro Security? And Why Are We Talking about Macros?	54
Digital Signatures	56
Expression Sandbox	58
End-User Enhancements	59
Pivot Charts	59
Windows XP Theming	59
Templates	60
Smart Tags	61
AutoCorrect Options Buttons	62
Better Accessibility	62
XML and Access	62
Relating XML to HTML	63
The Advantages of XML	64
Using Access 2003 with SharePoint Services	66
Export Information to a SharePoint Server	66
Import Information From a SharePoint Server	67
Access Developer Extensions	68
The Property Scanner	69
The Custom Startup Wizard	69
The Package Wizard	71
Summary	72
 Chapter 4: VBA Basics	 73
 VBA Objects	 73
Objects	73

Methods	74
Events	74
Variables and VBA Syntax	75
Variables	75
Other VBA Structures	89
Comments	89
Line Continuation	91
Constants	93
Enums	94
Summary	95
 Chapter 5: Using the VBA Editor	 97
Anatomy of the VBA Editor	97
Your Access Database and VBA Project—Better Together	99
Using the Object Browser	99
Testing and Debugging VBA Code	102
Summary	112
 Chapter 6: Using DAO to Access Data	 113
Direct Access Objects	113
Why Use DAO?	114
Referring to DAO Objects	116
Default Collection Items	117
The DBEngine Object	118
The Workspaces Collection	118
The Errors Collection	122
The Databases Collection	123
The Connections Collection	128
DAO Object Properties	129
DAO Property Types	129
Creating Schema Objects with DAO	134
Managing Jet Security with DAO	142
Creating Security Objects	143
Managing Users and Groups	143
Managing Passwords	148
Managing Permissions	148
Data Access with DAO	152
Working with QueryDefs	153
Working with Recordsets	157
Filtering and Ordering Recordsets	159

Contents

Navigating Recordsets	162
Bookmarks and Recordset Clones	166
Finding Records	169
Working with Recordsets	171
Summary	175
 Chapter 7: Using ADO to Access Data	 177
 Ambiguous References	 178
Referring to ADO Objects	179
Default Collection Items	179
Connecting to a Data Source	179
Specifying a Cursor Location	180
Rolling Your Own Connection String	181
Creating and Using a Data Link	182
Data Access with ADO	185
The ADO Object Model	185
Executing Action Queries	186
Creating ADO Recordsets	190
Creating a Standard Recordset	190
Creating a Recordset from a Command Object	190
Opening a Shaped Recordset	191
Verifying the Options That a Recordset Supports	194
Referring to Recordset Columns	195
Filtering and Ordering Recordsets	196
Navigating Recordsets	196
Finding Records	197
Editing Data with Recordsets	200
Persistent Recordsets	201
Creating Schema Recordsets	206
Using ADO Events	209
Testing the State Property	210
Creating Schema Objects with ADOX	211
The ADOX Object Model	211
Working with Queries (Views)	212
Creating Tables and Columns	213
Creating Indexes	215
Creating Relations	217
Managing Jet Security with ADO	218
Creating Groups and Users	218
Managing Permissions	219
Summary	220

Chapter 8: Executing VBA	223
When Events Fire	224
Common Form Events	224
Common Control Events	225
Common Report Events	225
Asynchronous Execution	226
VBA Procedures	227
Function or Sub?	227
Public or Private?	228
Coupling and Cohesion	229
Error Handling	231
Class Modules	231
Using Variables	234
Using Appropriate Data Types and Sizes	234
Using Global Variables	235
Evaluating Expressions in VBA	235
If .. Then	235
Checking for Nulls	236
Nulls and Empty Strings	236
Select Case	237
Using Recordsets	237
Opening Recordsets	238
Looping Through Recordsets	238
Adding Records	239
Finding Records	239
Updating Records	240
Using Multiple Recordsets	240
Cleaning Up	244
Using VBA in Forms and Reports	244
All About “Me”	245
Referring to Controls	245
Referring to Subforms and Subreports	246
Sizing Reports	247
Closing Forms	247
Debugging VBA	248
Responding to Errors	248
Investigating Variables	250
When Hovering Isn’t Enough—Using the Immediate Window	251
Setting Breakpoints	252
Setting Watch Values	253
Stopping Runaway Code	255

Contents

Stepping Through Your Code	255
Common VBA Techniques	256
Date Handling	258
Handling Rounding Issues	260
String Concatenation Techniques	262
Summary	263
Chapter 9: VBA Error Handling	265
Why Use Error Handling?	265
Two Kinds of Errors: Unexpected and Expected	266
Handling Unexpected Errors	266
Absorbing Expected Errors	267
Basic Error Handling	267
Basic Error Handling with a Twist	269
Example of the Extra Resume	270
Cleaning Up After an Error	274
More on Absorbing an Expected Error: Example	275
Error Handling with Logging	278
Error Handling That Sends E-mail	279
Summary	279
Chapter 10: Using VBA to Enhance Forms	281
Concept Review	282
Properties	283
Event Properties	283
Associating Code to an Event Property	284
You Talking to Me?	286
Event Property and Procedure Examples	287
Form_Open(): Passing the OpenArgs Parameter	287
OnTimer(): Performing an Action on an Interval	288
OnClick(): Open a Form Based on Value on Current Form	289
OnCurrent(): Opening Existing Records as “Read-Only”	290
BeforeUpdate(): Performing Data Validation	291
AfterUpdate(): Synchronizing Two Combo Boxes	292
OnChange(): Late Bind a Subform on a Tab Control	293
NotInList(): Adding a Value to a Combo Box at Runtime	297
On Close(): Save a Setting to the Registry	300
Creating Forms and Controls with VBA	303
Managing Multiple Form Instances	306

When Not to Use VBA	310
Synchronized Subforms	310
Displaying Data in a Treeview Control	311
Summary	318
 Chapter 11: Enhancing Reports with VBA	 319
Event Properties	319
Associating Code to an Event Property	320
You Talking to Me?	322
Event Property and Procedure Examples	323
Report_Open(): Execute a Query Before Report Displays	323
Report_NoData(): What to do When There is No Data to Display	324
Section _Format(): Dynamically Display Page Numbers	326
Section_Print(): Conditional Formatting of a Text Box	327
Compute a Running Balance	328
Running Sum Property	330
The Report Design	331
VBA Code Behind Report	332
When Not to Use VBA	334
Summary	337
 Chapter 12: Creating Classes in VBA	 339
A Touch of Class	340
Why Use Classes?	342
Creating a Class Module	343
Adding a Class Module to the Project	343
A Brief Word on Naming the Class	344
Instantiating Class Objects	344
Creating Class Methods	345
Creating Property Procedures	348
Naming Objects	354
What Does the Object Do?	354
Verbs, Nouns, and Adjectives	355
Using Class Events	356
Handling Errors in Classes	361
Forms as Objects	365
Variable Scope and Lifetime	370
The Me Property	373
Creating and Using Collection Classes	374
The Three Pillars	384

Contents

Inheriting Interfaces	387
Instancing	391
Summary	391
Chapter 13: Extending VBA with APIs	393
Introducing the Win32 API	393
Why Do You Need the API?	395
Introducing DLLs	397
Static Linking	397
Dynamic Linking	398
Linking Libraries in Access 2003	398
Referencing a Library	398
Declaring APIs	401
Understanding C Parameters	404
Signed and Unsigned Integers	405
8-Bit Numeric Parameters	405
16-Bit Numeric Parameters	406
32-Bit Numeric Parameters	406
Currency Parameters	407
Floating-Point Parameters	407
Boolean Parameters	407
Handle Parameters	408
Object Parameters	409
String Parameters	409
Variant Parameters	410
Pointers to Numeric Values	411
Pointers to C Structures	411
Pointers to Arrays	411
Pointers to Functions	412
The Any Datatype	413
Err.LastDLLError	413
Distributing Applications That Reference Type Libraries and Custom DLLs	414
Summary	414
Chapter 14: SQL and VBA	415
Working with SQL Strings in VBA	415
Building SQL Strings with Quotes	416
Using Single Quotes Instead of Double Quotes	417
Concatenating Long SQL Strings	418
Using SQL When Opening Forms and Reports	419

Using SQL to Enhance Forms	420
Sorting on Columns	420
Selections on Index Forms	422
Cascading Combo Boxes	429
Using SQL for Report Selection Criteria	431
Altering the SQL Inside Queries	436
The ReplaceOrderByClause and ReplaceWhereClause Functions	437
Summary	443
 Chapter 15: Working with Office Applications	 445
Sharing Information Is a Two-Way Street	445
Access and Outlook—Sharing Data with Others	446
Working with Outlook's Security Features	450
Creating Other Types of Outlook Items from Access	451
Sending Information from Access to Excel	452
Provide Management with Flexible Data Access	452
Exchanging Information with Microsoft Word	460
The Easy Way—Use Access VBA to Start Your Merge	461
The Hard Way—Using VBA to Set Up Your Merge Document	462
Non-Mail Merge Operations—Sending Access Data to Word	463
An Advanced Example—Creating a Graph in Access and Inserting It into PowerPoint	464
Using the Access Object Model to Pull Data from Access to Other Applications	467
Summary	470
 Chapter 16: Database Security	 471
Access Security Model Overview	471
Shared-Level Security	474
Shared-Level Secured Back-End Databases	474
Setting Up Shared-Level Security Using the Access Interface	475
Encoding a Database	480
Creating an Encoded Database	481
Decoding an Encoded Database	481
Secure VBA Code	481
Securing Modules by Securing the Project	481
Compiling to Make an MDE File	484
User-Level Security	487
Main Components of User-Level Security	488
Methods to Create User-Level Security	492
Summary	529

Contents

Chapter 17: Understanding Client/Server Development with VBA **531**

ADP Versus MDB: Choosing the Right Client Format	532
What Is an MDB File?	532
What Is an ADP?	543
Which Format Is Right for You?	550
Controlling the Logon Process	552
Using Linked Tables with MDB Files	552
Using Access Projects	555
Binding Recordsets to Objects	558
Binding to a Form, Combo Box, or List Box	558
Binding to a Report	558
Using Persisted Recordsets	562
Using Unbound Forms	564
Why Use Unbound Forms?	564
Summary	572

Chapter 18: Working with the Win32 Registry **573**

About the Registry	574
What the Registry Does	574
What the Registry Controls	575
Accessing the Registry	576
Registry Organization	576
Using the Built-In VBA Registry Functions	581
SaveSetting	582
GetSetting	583
GetAllSettings	583
DeleteSetting	584
Typical Uses for the Built-In VBA Registry Functions	585
Using the Win32 Registry APIs	588
Putting It All together	588
Summary	598

Chapter 19: Using the ADE Tools **599**

Redistributable Access Runtime	600
Property Scanner	601
Property Scanner Search Specification	601
Search Results	603
Custom Startup Wizard	603
Step 1: Identify the Template	605

Step 2: Describe the Database and Set Startup Options	605
Step 3: Define the Startup Options in the Database	607
Step 4: Save the Template/Create a Batch File	609
Package Wizard	610
Step 1: Identify the Template	610
Step 2: Define the Package to Create	611
Step 3: Define the Application Startup Options	613
Step 4: Add Files and Registry Keys	615
Step 5: The Installer's Experience	615
Step 6: Set Installer Package Properties	618
Step 7: Save the Template/Create a Batch File	619
Step 8: (Optional) Modify Your Install Package (MSI)	620
Summary	624
 Chapter 20: Macro Security	 627
 Macro Security	 628
What Is Macro Security?	628
Why Have Macro Security?	628
Security Checks Done before Opening a Database	629
Digital Signatures and Certificates	634
Types of Digital Signatures	635
Using Self-Certification	636
Microsoft Jet Expression Services and Sandboxes	643
More about Errors and How to Fix Them	644
Sandbox Mode Limitations	646
Workarounds	646
Summary	647
 Appendix A: Upgrading to Access 2003	 651
Appendix B: References for Projects	667
Appendix C: DAO Object Method and Property Descriptions	679
Appendix D: ADO Object Model Reference	715
Appendix E: The Access Object Model	731
Appendix F: Windows API Reference Information	803
Appendix G: Naming Conventions	809
Appendix H: Reserved Words and Special Characters	833
Appendix I: Tips and Tricks	847
Appendix J: ADO Object Argument Information	887
Appendix K: Access Wizards, Builders, and Managers	903
Appendix L: Windows Registry Information	909
Index	933
