Chapter 1. Background
Section 1.1. A (Very) Brief History of the Internet
Section 1.2. On the Internet and Internets
Section 1.3. The Domain Name System in a Nutshell
Section 1.4. The History of the Microsoft DNS Server
Section 1.5. Must I Use DNS?
Chapter 2. How Does DNS Work?
Section 2.1. The Domain Namespace
Section 2.2. The Internet Domain Namespace
Section 2.3. Delegation
Section 2.4. Name Servers and Zones
Section 2.5. Resolvers
Section 2.6. Resolution
Section 2.7. Caching

Chapter 3. Where Do I Start?
Section 3.1. Which Name Server?
Section 3.2. Choosing a Domain Name
Chapter 4. Setting Up the Microsoft DNS Server
Section 4.1. Our Zone
Section 4.2. Installing the Microsoft DNS Server
Section 4.3. The DNS Console
Section 4.4. Setting Up DNS Data
Section 4.5. Running a Primary Master Name Server
Section 4.6. Running a Secondary Name Server
Section 4.7. Adding More Zones
Section 4.8. DNS Properties
Section 4.9. What Next?
Chapter 5. DNS and Electronic Mail
Section 5.1. MX Records
Section 5.2. Adding MX Records with the DNS Console
Section 5.3. What's a Mail Exchanger, Again?
Section 5.4. The MX Algorithm
Section 5.5. DNS and Exchange
Chapter 6. Configuring Hosts
Section 6.1. The Resolver
Section 6.2. Resolver Configuration
Section 6.3. Advanced Resolver Features
Section 6.4. Other Windows Resolvers
Section 6.5. Sample Resolver Configurations
Chapter 7. Maintaining the Microsoft DNS Server
Section 7.1. What About Signals?
Section 7.2. Logging
Section 7.3. Updating Zone Data
Section 7.4. Zone Datafile Controls
Section 7.5. Aging and Scavenging
Chapter 8. Integrating with Active Directory
Section 8.1. Active Directory Domains
Section 8.2. Storing Zones in Active Directory
Section 8.3. DNS as a Service Location Broker
Chapter 9. Growing Your Domain
Section 9.1. How Many Name Servers?
Section 9.2. Adding More Name Servers
Section 9.3. Registering Name Servers
Section 9.4. Changing TTLs
Section 9.5. Planning for Disasters
Section 9.6. Coping with Disaster
Chapter 10. Parenting
Section 10.1. When to Become a Parent
Section 10.2. How Many Children?
Section 10.3. What to Name Your Children

Section 10.4. How to Become a Parent: Creating Subdomains
Section 10.5. Subdomains of in-addr.arpa Domains
Section 10.6. Good Parenting
Section 10.7. Managing the Transition to Subdomains
Section 10.8. The Life of a Parent
Chapter 11. Advanced Features and Security
Section 11.1. New Ways to Make Changes
Section 11.2. WINS Linkage
Section 11.3. Building Up a Large, Sitewide Cache with Forwarders
Section 11.4. Load Sharing Between Mirrored Servers
Section 11.5. The ABCs of IPv6 Addressing
Section 11.6. Securing Your Name Server
Chapter 12. nslookup and dig
Section 12.1. Is nslookup a Good Tool?
Section 12.2. Interactive Versus Noninteractive
Section 12.3. Option Settings
Section 12.4. Avoiding the Search List
Section 12.5. Common Tasks
Section 12.6. Less Common Tasks
Section 12.7. Troubleshooting nslookup Problems
Section 12.8. Best of the Net
Section 12.9. Using dig
Chapter 13. Managing DNS from the Command Line
Section 13.1. Installing the DNS Server
Section 13.2. Stopping and Starting the DNS Server Service
Section 13.3. Managing the DNS Server Configuration
Section 13.4. An Installation and Configuration Batch Script
Section 13.5. Other Command-Line Utilities
Chapter 14. Managing DNS Programmatically
Section 14.1. WMI and the DNS Provider
Section 14.2. WMI Scripting with VBScript and Perl
Section 14.3. Server Classes
Section 14.4. Zone Classes
Section 14.5. Resource Record Classes
Chapter 15. Troubleshooting DNS
Section 15.1. Is DNS Really Your Problem?
Section 15.2. Checking the Cache
Section 15.3. Using DNSLint
Section 15.4. Potential Problem List
Section 15.5. Interoperability Problems
Section 15.6. Problem Symptoms
Chapter 16. Miscellaneous
Section 16.1. Using CNAME Records
Section 16.2. Wildcards
Section 16.3. A Limitation of MX Records
Section 16.4. DNS and Internet Firewalls

Section 16.5. Dial-up Connections
Appendix A. DNS Message Format and Resource Records
Section A.1. Master File Format
Section A.2. DNS Messages
Section A.3. Resource Record Data
Appendix B. Converting from BIND to the Microsoft DNS Server
Section B.1. Step 1: Change the DNS Server Startup Method to File
Section B.2. Step 2: Stop the Microsoft DNS Server
Section B.3. Step 3: Change the Zone Datafile Naming Convention
Section B.4. Step 4: Copy the Files
Section B.5. Step 5: Get a New Root Name Server Cache File
Section B.6. Step 6: Restart the DNS Server
Section B.7. Step 7: Change the DNS Server Startup Method to Registry
Appendix C. Top-Level Domains
Colophon
