Contents

Foreword xiii

Introduction 1

Acronyms and general notations 9

Chapter 1. MANAGEMENT AND RISK 11

1.1. History of Interrelation of Management and Risk 11
1.2. Reasons and consequences of large accidents 15
1.3. The most dangerous industry branches 17
1.4. Values of risk and damage 17
1.5. Sources of accidents depending on humans 18
1.6. Risk management and insurance 20
1.7. Monitoring and risk 21
1.8. State safety program of Russia 22
1.9. Methods of nonlinear mechanics and probability theory for accidents 24
1.10. Scenario LP-modelling and management of non-success risk 29

Chapter 2. THE HUMAN BEING AND RISKS 31

2.1. Frauds in business 31
2.2. Errors of personnel 32
2.3. Asymmetric actions of terrorists 33
2.4. Hackers attacks to informational networks 33
2.5. Personnel in modern civilization 33

Chapter 3. PRINCIPLES OF RISK MANAGEMENT IN DESIGN 39

3.1. Style, concepts and methods of designers 39
3.2. General scientific knowledge in the area of risk 42
3.3. Models and rules 43
3.4. Occam's razor 44
3.5. Physical approach 45
3.6. Scheme of complex object management 46

3.7. Minimization of the number of decisions 48
3.8. Structural design 50
3.9. Concept of the acceptable risk 52
3.10. Markowitz's and VaR-approach to investment risk 54
3.11. Active and passive management of risk 57
3.12. Algorithmic calculations 60
3.13. Arithmetical and logical addition 61

Chapter 4. RISK MANAGEMENT AT DEBUGGING TESTS 65

4.1. Definition of debugging tests 65
4.2. Analysis of debugging process 67
4.3. Management of debugging process 70
4.4. Technology of debugging tests 72
4.5. Non-success risk scenarios of debugging 73
4.6. Structural and LP-models of debugging non-success risk . 78
4.7. Complexity of debugging 79
4.8. Development of the debugging program 84
4.9. Risk management in operating tests 87

Chapter 5. RISK MANAGEMENT IN OPERATION ON BASIS OF MONITORING 95

5.1. Destruction, wearing and deterioration of equipments in operation 95
5.2. Monitoring in engineering 96
5.3. Monitoring of infrastructure of rocket launcher 98
5.3.1. Scenarios of accident appearance 98
5.3.2. System of monitoring 103

Chapter 6. RISK MANAGEMENT ON DANGEROUS PLANT 107

6.1. Difficult problems 107
6.2. Management of risk 109
6.2.1. Period of safe wearing of resource 109
6.2.2. Risk systematization and classification of problems 111
6.2.3. The use of risk computation results in exploitation 122
6.2.4. Principles of work organization for risk decrease . . 123
6.3. Financing of the risk management process 125
6.4. Reliability regulation of engineering and a person 129

6.5. Consideration of natural and man-caused accidents 130
6.6. Probability of poor organization 131

Chapter 7. BASES OF LOGIC AND PROBABILISTIC CALCULUS 133

7.1. Some information from Boolean algebra 133
7.2. Basic logical operations 134
7.3. Basic definitions and accepted notations 140
7.4. Some theorems of Boolean algebra and probabilistic logic . 145

Chapter 8. LOGIC AND PROBABILISTIC METHOD AND RISK 151

8.1. Basic concepts and definitions of the theory of risk and safety 151
8.2. The basic principles of the LP-method 152
8.3. Transformation of L-function to P-polynomial 155
8.4. "Weight" of the argument in the L-function 157
8.4.1. Calculation of Boolean difference 157
8.4.2. Calculation of element's weight in L-functions . . . 158
8.4.3. Examples 160
8.5. "Importance" of elements in a system 162
8.6. Example of construction of the L-function of danger . . . 163

Chapter 9. AUTOMATED STRUCTURAL AND LOGICAL MODELLING 167

9.1. Problems of LP-modelling 167
9.2. Risk scenario of a railway accident 169
9.3. Idea of development of LP-modelling 169
9.4. Basic stages of LP-modelling 171
9.5. Algorithmic methods of primary structural and logical modelling 173
9.6. Graphical-analytic method of determination of L-function of system efficiency 179
9.7. Combined method of construction of probabilistic polynomials 184
9.7.1. Rules of quasi-orthogonalization on one variable . . 185
9.7.2. Rules of symbol transition to the probabilistic polynomial 185

9.8. Calculation of standard probabilistic characteristics of systems 187

Chapter 10. FOUNDATIONS OF THE RISK LP-THEORY WITH GROUPS OF INCOMPATIBLE EVENTS 191

10.1. Tabular representation of statistical data 192
10.2. Grade-events distribution in GIE 193
10.3. Logical rules of probabilities calculation in GIE 195
10.4. Orthogonality of L-functions for different objects of the table 196
10.5. Dependent parameter-events 197
10.6. Independent parameter-events 197
10.7. Risk parameters Y_{ad}, $Risk$, N_{ad} 199
10.8. Optimization problems 201
10.9. Analysis of risk 202
10.10. Generation of an arbitrary distribution 202
10.11. Dynamic risk LP-models 203
10.12. Problem areas of usage of the risk LP-theory with GIE . 204

Chapter 11. THE RISK LP-THEORY WITH GIE IN THE CLASSIFICATION PROBLEM 209

11.1. Methods of classification of credits 209
11.2. Tabular representation of statistical data 211
11.3. Basic equations 212
11.4. Examples of structural, logic and probabilistic risk models 214
11.5. Measure and cost of risk 215
11.6. GIE and the Bayes formula 216
11.7. Dynamic risk LP-models 219

Chapter 12. IDENTIFICATION OF RISK LP-MODELS WITH GROUPS OF INCOMPATIBLE EVENTS 223

12.1. Statement of identification problem and algorithm of its solution 224
12.2. Methods of identification 226
12.3. Choice of initial values and parameters of training 230
12.4. Optimization in identification problems 241
12.4.1. Formulae of optimization 241
12.4.2. Numerical experiments at optimization 245
12.5. Accuracy of the risk LP-model 253

12.6. Robustness of the risk LP-model 254

Chapter 13. RISK ANALYSIS IN SYSTEMS WITH GIE 257

13.1. Statistical risk analysis 257
13.2. Combinatorial risk analysis 258
13.3. Logical-probabilistic risk analysis 264

Chapter 14. SOFTWARE FOR RISK ANALYSIS AND MANAGEMENT 267

14.1. Intellectual Work Station for safety management 267
14.2. Software for identification and analysis of risk LP-models with GIE 270
14.3. Software for structural and logic modelling 278
14.4. Software for LP-modelling on the basis of cortege algebra 284
14.4.1. Risk analysis of systems with many conditions . . 285
14.4.2. Description of SoftWare 291

Chapter 15. RISK LP-MODELS IN BUSINESS 295

15.1. Credit risks: scenarios and LP-models 295
15.1.1. Credit risk problem 295
15.1.2. Logic and probabilistic models of credit risk 296
15.1.3. Analysis of bank credit activity 297
15.2. Bribes: scenarios and risk LP-models 300
15.3. Frauds: scenarios and LP-models 303
15.3.1. LP-model of manager's fraud 303
15.3.2. LP-model of fraud with investments 305
15.4. Management of the state and development of company by risk criterion 307
15.4.1. Principles of management of banks or companies . 307
15.4.2. Total risk LP-model of bank and danger levels . . 309
15.5. Scenarios and risk LP-models for interaction of banks and companies 311
15.5.1. Struggle of building firms for profitable contract . 311
15.5.2. Financing of building projects with reservation . . 313

Chapter 16. LOGIC AND PROBABILISTIC THEORY OF SECURITY PORTFOLIO RISK 315

16.1. Introduction 315
16.2. Selection of the optimum portfolio by *VaR* 317

16.3. Selection and analysis of the optimal security portfolio by *LP–VaR* 319
16.4. Investigation with independent random yields 324
16.5. Investigation with dependent random yields 332

Chapter 17. RISK LP-MODELS IN ENGINEERING 335
17.1. Explosion in a submarine: scenario and risk LP-model . . 335
17.2. Risk LP-model of the structural-complex system 341
17.3. Risk by prolongation of resource of power equipments . . 343
17.4. Safety management of nuclear power plants by the method of dynamic barriers 344

Chapter 18. RISK LP-THEORY IN PROBLEMS OF EFFECTIVENESS 353
18.1. General problem of quality management in business . . . 353
18.2. Particular problems of quality loss risk 358
18.3. Risk LP-modelling and analysis in problems of effectiveness 362
18.3.1. General principles 363
18.3.2. Classification of object conditions to several classes 364
18.3.3. Finding weights of parameters influential the parameter of effectiveness 365

Conclusion 371
