About the Authors	xvii
About the Technical Reviewer	xix
Acknowledgments	xxi
Introduction	xxiii

PART I ■■■ Introduction and Concepts

■ CHAPTER 1	Introduction to db4o	3
	Transparent Persistence	4
	Object Databases	5
	db4o Basics	6
	Queries in db4o	10
	Native Queries	10
	Simple Object Data Access (SODA)	12
	The ObjectManager	12
	db4o Application Areas	13
	Complexity	14
	Mobility	14
	Connectivity	14
	The Open Source Advantage	15
	Structure of This Book	15
	Languages and Versions	16
■ CHAPTER 2	Object-Oriented Concepts	17
	Objects	17
	Encapsulation and Information Hiding	17
	Responsibilities and Collaboration	18
	Messages	18

Classes	18
Class Diagrams	19
Creating a Class	20
Creating an Object	21
Sending Messages to Objects	21
Class Types	22
Inheritance	22
Polymorphism	24
Abstract Classes	25
Interfaces	25
Object Relationships	27
is-a	28
has-a	28
uses-a	29
Design Patterns	29

■ CHAPTER 3 **Comparing the Object and Relational Data Models** 31

Data Models	31
First Generation	32
Hierarchical Data Model	32
Network Data Model	33
Second Generation: The Relational Model	35
Data Access in the Relational Model	35
Using the Relational Model with Procedural Programs	36
Using the Relational Model with Object-Oriented Programs	36
Third Generation: “Post-Relational” Models	37
The Object Data Model	37
The Object-Relational Model	38
Fitting Objects into a Relational Database	39
Aggregation	39
Inheritance	41
Many-Many Relationships	43
Complex Relationships	44
Referential Integrity and All That	45
Queries	45
Referential Integrity	46
Transactions	46
Isolation	46
Summary	46

CHAPTER 4	OODBMS Basics	47
	Object Identity	47
	Equivalence and Equality	49
	Objects and Literals	50
	Extent	50
	The Database Schema	50
	Properties and Relationships	50
	Methods	51
	Class Variables	51
	Object Relationships	51
	Storing OIDs to Represent Relationships	51
	Inverse Relationships	53
	Defining the Relationships	54
	Integrity	56
	Depth of Equality	57
	Common Types of Object Relationships	57
	One-to-Many Relationships	57
	Many-to-Many Relationships	60
	Inheritance	63
	Indexing	64
	Queries	65
	What Do You Get from a Query?	65
	OQL	66
	Native Queries	67
	Transactions and Concurrency	67
	Summary	68

PART II ■■■ Working with db4o

CHAPTER 5	Quick Start	71
	C# or Java?	71
	Installing db4o	72
	Installing db4o for C#	73
	Using db4o in a C# Project	73
	Installing db4o for Java	75
	Using db4o in a Java Project	75

Running db4o	76
Creating the Database	77
Starting the Database	77
db4o Basics	78
Storing Objects	78
Closing the Database	81
Retrieving Objects	81
Updating Objects	84
Deleting Objects	84
Startup Options	85
A Complete Example	86
Getting Started with the ObjectManager	88
Using the ObjectManager to Query Your Objects	90
Troubleshooting	92
Summary	93

■ CHAPTER 6 **Querying Objects**

Query by Example (QBE)	96
Simple Example	97
Constraining Fields	98
More Ways of Matching	99
Limitations and Caveats	100
Native Queries	100
Query Languages	100
The Programming Language As the Query Language	101
Using Native Queries	102
More Complex Queries	105
Sorting	107
Optimization	108
Using Query Templates	111
SODA	114
SODA Query Graphs	114
SODA Keywords	115
Using SODA	116
Using Constraints	118
Advanced SODA Syntax	121
Summary	124

CHAPTER 7	Working with Objects	125
	Meet the Objects	125
	Simple Structured Objects	130
	Storing and Retrieving Simple Structured Objects	134
	Queries	135
	Updating and Deleting Simple Structured Objects	139
	Deleting Simple Structured Objects	141
	Object Activation	142
	Object Hierarchies	144
	Deep Queries	147
	Objects with Inverse Associations	149
	Inheritance	152
	Objects with Multivalued Attributes: Arrays	157
	Query by Values in the Array	159
	More Complex Queries	162
	Updating and Deleting	163
	Objects with Multivalued Attributes: Collections	164
	Storing Objects	167
	Query for an Object	168
	Query by Objects in the Collection	169
	Updating and Deleting	172
	Object Activation and Circular References	174
	Object Activation and Deep Object Graphs	179
	A Very Simple Deep Graph	180
	Activating the Whole Graph	186
	Composite Hierarchies	188
	Summary	193
CHAPTER 8	Client/Server Mode	195
	Introduction to db4o Client/Server Modes	195
	Networking Mode	197
	Server	197
	Clients	200
	Running the Example	204
	Embedded Mode	207
	Starting the Server	208
	Server and Client Threads	211
	Using a Singleton Registry	213

Out-of-Band Signaling	214
Sending the Message	216
Processing the Message	219
Summary	222

CHAPTER 9 Transactions 223

Working with Transactions	224
Committing a Transaction	231
Rollback and Refresh	234
Concurrent Transactions	235
Isolation Level	236
Looking at Transaction Isolation	237
Collisions	241
Collision Detection	242
Collision Avoidance with Semaphores	243
Failures and Durability	247
Summary	247

CHAPTER 10 Configurations and Tuning 249

Using Configurations	250
The Configuration Interface	251
Object-Related Configurations	253
ActivationDepth(int depth)	253
Callbacks(bool flag)	254
ClassActivationDepthConfigurable(bool flag)	254
Generateuuids(int setting)	254
Generateversionnumbers(int setting)	254
MarkTransient(string attributeName)	255
ObjectClass(object clazz)	256
Unicode(bool flag)	256
UpdateDepth(int depth)	256
WeakReferenceCollectionInterval(int milliseconds)	257
WeakReferences(bool flag)	257
File-Related Configurations	257
BlockSize(int bytes)	257
DisableCommitRecovery()	258
Encrypt(bool flag)	258

FlushFileBuffers(bool flag)	258
Io(IoAdapter adapter)	259
LockDatabaseFile(bool flag).	259
Password(string pass)	259
ReadOnly(bool flag).	260
ReserveStorageSpace(long byteCount)	260
SetBlobPath(string path)	260
Reflection-Related Configurations	263
CallConstructors (bool flag)	263
DetectSchemaChanges(bool flag).	263
OptimizeNativeQueries().	264
OptimizeNativeQueries(bool optimizeNQ).	264
ReflectWith(Reflector reflector)	264
RefreshClasses().	264
SetClassLoader(ClassLoader classLoader)	264
TestConstructors(bool flag)	264
Communication-Related Configurations	265
GetMessageSender()	265
SetMessageRecipient(MessageRecipient messageRecipient).	265
SingleThreadedClient(bool flag)	265
TimeoutClientSocket(int milliseconds)	266
TimeoutPingClients(int milliseconds)	266
TimeoutServerSocket(int milliseconds)	266
Logging-Related Configurations	266
MessageLevel(int level)	266
SetOut(PrintStream outputStream).	267
Miscellaneous Configurations	267
AutomaticShutDown(bool flag)	267
ExceptionsOnNotStorable(bool flag)	268
Freespace()	268
A Glimpse into the ExtObjectContainer	269
External Tools	271
Defragment	271
Statistics	271
Logger	272
Tuning for Speed	272
Summary	273

CHAPTER 11	Replication	275
	db4o Replication Mechanisms	276
	Configuring db4o Core Replication	276
	Generating Unique IDs and Version Numbers	276
	Creating a ReplicationProcess Object	277
	Replicating Objects	279
	Putting It Together—A Complete Example	279
	Replication with Existing Databases	289
	The db4o Replication System	289
	Installing dRS	290
	dRS Replication Between db4o Databases	291
	Selective Replication	295
	Replicating with Hibernate	295
	Setting Up Hibernate	296
	Creating the HSQLDB Database	299
	Running Hibernate Replication with dRS	300
	A Complete Example	301
	UUIDs and Version Numbers	303
	Detecting RDBMS Updates Made via Hibernate	303
	dRS, Hibernate, and Structured Objects	304
	One-to-One Relationships	304
	Collections	305
	Summary	307
CHAPTER 12	Advanced Issues	309
	IDs	309
	UUIDs	311
	Indexes	312
	Callbacks	314
	Callback Example—Recording or Preventing Updates	315
	Other Possible Use Cases for Callbacks	319
	Semaphores	320
	Semaphore Example—Limiting Number of Clients	320
	Web Environments	327
	ASP.NET Example	328
	JSP/Servlet Example	336
	Web Environments: Wrapping Up	340
	Working in a Mixed .NET/Java Environment	341
	Caveats	347

Schema Evolution	348
Common Refactoring Scenarios	349
Inheritance Evolution	350
Pluggable File I/O	351
The Standard Adapter	351
Alternative Adapters	352
Encryption	353
Simple Encryption	354
Strong Encryption	354
The Generic Reflector	356
A Look into the Future	358
Summary	359

PART III ■■■ db4o in the Real World

■ CHAPTER 13 From RDBMS to OODBMS	363
Designing the Database	363
Basic SQL Statements	365
INSERT Statements	365
SELECT Statements	366
UPDATE Statements	367
DELETE Statements	368
Complex SQL Statements	369
Joins	369
Working with Object Graphs	371
Deep Queries	372
Subselect	374
Operators: LIKE, IN, BETWEEN, EXIST	375
Sorting	376
Views	376
Aggregate Functions and Grouping	379
Constraints and Referential Integrity	381
NOT NULL/CHECK/FOREIGN KEY	381
PRIMARY KEY	381
ON DELETE CASCADE	382
Triggers	383
Stored Procedures	386

Structural Changes	386
ALTER	387
DROP	387
Transactions	388
Other Database Objects	390
Sequence	390
Index	391
Summary	392

CHAPTER 14 Technical Considerations When Using db4o 393

Performance	393
Benchmarking: David vs. Goliath?	393
Behavior with a Large Quantity of Data	396
Behavior with Large Numbers of Users	398
How Does the .NET Version Differ?	398
Wrapping Up	399
Suitability of db4o for Specific System Types	399
Embedded Systems	399
Distributed Systems	402
Enterprise Systems	406
Summary	407

CHAPTER 15 The Business Case for db4o 409

The Technology	409
The Company: db4objects, Inc.	410
License Model	410
The GPL	411
Licensing Examples	412
Commercial Terms	414
Common Persistence Solutions	414
Design Process	415
JDBC	415
ADO.NET	416
Enterprise JavaBeans	416
Object-Relational Mapping Frameworks	417
The Alternative: db4o Persistence	418
Market Opportunities	419
Addressing Perceived Problems with Object Databases	419

Benefits and Pitfalls of db4o	420
Benefits	420
Pitfalls	420
Risk Analysis	421
Technology	421
The Vendor	422
Industry Acceptance	422
 ■ APPENDIX A Working with the ObjectManager	423
 ■ APPENDIX B Quick Reference	435
 ■ APPENDIX C Bibliography	449
 ■ INDEX	453
