

Procedure	Use
DROP_EXTRAS Procedure	Cleans up after an import by dropping extra hint records not accounted for by hintcount.
DROP_UNREFD_HINTS Procedure	Drops hint records that have no corresponding outline in the OL\$ table.
UPDATE_SIGNATURES Procedure	Used when importing an 8i outline into a 9i database to update signatures.

Manually Editing Plans

In Oracle9i, you can edit stored outlines either with the Outline Editor in Enterprise Manager (OEM) or manually by querying the local OL\$HINTS tables and performing DML against the appropriate hint records. A screen shot of the OEM Outline editor is shown below.
