Chapter 1. Getting Started
Introduction
Recipe 1.1. Downloading the Latest Release
Recipe 1.2. Installing sendmail
Recipe 1.3. Compiling sendmail to Use LDAP
Recipe 1.4. Adding the regex Map Type to sendmail
Recipe 1.5. Compiling sendmail with SASL Support
Recipe 1.6. Compiling sendmail with STARTTLS Support
Recipe 1.7. Compiling in STARTTLS File Paths
Recipe 1.8. Building a sendmail Configuration
Recipe 1.9. Testing a New Configuration
Recipe 1.10. Logging sendmail
Chapter 2. Delivery and Forwarding
Introduction
Recipe 2.1. Accepting Mail for Other Hosts
Recipe 2.2. Fixing the Alias0 Missing Map Error and Creating Simple Aliases

Recipe 2.3. Reading Aliases via LDAP
Recipe 2.4. Configuring Red Hat 7.3 to Read Aliases from a NIS Server
Recipe 2.5. Configuring Solaris 8 to Read Aliases from a NIS Server
Recipe 2.6. Forwarding to an External Address
Recipe 2.7. Creating Mailing Lists
Recipe 2.8. Migrating Ex-Users to New Addresses
Recipe 2.9. Delivering Mail to a Program
Recipe 2.10. Using Program Names in Mailing Lists
Recipe 2.11. Allowing Nonlogin Users to Forward to Programs
Recipe 2.12. Fixing a .forward Loop
Recipe 2.13. Enabling the User Database
Chapter 3. Relaying
Introduction
Recipe 3.1. Passing All Mail to a Relay
Recipe 3.2. Passing Outbound Mail to a Relay
Recipe 3.3. Passing Local Mail to a Mail Hub
Recipe 3.4. Passing Apparently Local Mail to a Relay
Recipe 3.5. Passing UUCP Mail to a Relay
Recipe 3.6. Relaying Mail for All Hosts in a Domain
Recipe 3.7. Relaying Mail for Individual Hosts
Recipe 3.8. Configuring Relaying on a Mail Exchanger
Recipe 3.9. Loading Class $=R via LDAP
Recipe 3.10. Relaying Only Outbound Mail
Chapter 4. Masquerading
Introduction
Recipe 4.1. Adding Domains to All Sender Addresses
Recipe 4.2. Masquerading the Sender Hostname
Recipe 4.3. Eliminating Masquerading for the Local Mailer
Recipe 4.4. Forcing Masquerading of Local Mail
Recipe 4.5. Masquerading Recipient Addresses
Recipe 4.6. Masquerading at the Relay Host
Recipe 4.7. Limiting Masquerading
Recipe 4.8. Masquerading All Hosts in a Domain
Recipe 4.9. Masquerading Most of the Hosts in a Domain
Recipe 4.10. Masquerading the Envelope Address
Recipe 4.11. Rewriting the From Address with the genericstable
Recipe 4.12. Rewriting Sender Addresses for an Entire Domain
Recipe 4.13. Masquerading with LDAP
Recipe 4.14. Reading the genericstable via LDAP
Chapter 5. Routing Mail
Introduction
Recipe 5.1. Routing Mail to Special Purpose Mailers
Recipe 5.2. Sending Error Messages from the mailertable
Recipe 5.3. Disabling MX Processing to Avoid Loops
Recipe 5.4. Routing Mail for Local Delivery
Recipe 5.5. Reading the mailertable via LDAP

Recipe 5.6. Routing Mail for Individual Virtual Hosts
Recipe 5.7. Routing Mail for Entire Virtual Domains
Recipe 5.8. Reading the virtusertable via LDAP
Recipe 5.9. Routing Mail with LDAP
Recipe 5.10. Using LDAP Routing with Masquerading
Chapter 6. Controlling Spam
Introduction
Recipe 6.1. Blocking Spam with the access Database
Recipe 6.2. Preventing Local Users from Replying to Spammers
Recipe 6.3. Reading the access Database via LDAP
Recipe 6.4. Using a DNS Blackhole List Service
Recipe 6.5. Building Your Own DNS Blackhole List
Recipe 6.6. Whitelisting Blacklisted Sites
Recipe 6.7. Filtering Local Mail with procmail
Recipe 6.8. Filtering Outbound Mail with procmail
Recipe 6.9. Invoking Special Header Processing
Recipe 6.10. Using Regular Expressions in sendmail
Recipe 6.11. Identifying Local Problem Users
Recipe 6.12. Using MILTER
Recipe 6.13. Bypassing Spam Checks
Recipe 6.14. Enabling Spam Checks on a Per-User Basis
Chapter 7. Authenticating with AUTH
Introduction
Recipe 7.1. Offering AUTH Authentication
Recipe 7.2. Authenticating with AUTH
Recipe 7.3. Storing AUTH Credentials in the authinfo File
Recipe 7.4. Limiting Advertised Authentication Mechanisms
Recipe 7.5. Using AUTH to Permit Relaying
Recipe 7.6. Controlling the AUTH= Parameter
Recipe 7.7. Avoiding Double Encryption
Recipe 7.8. Requiring Authentication
Recipe 7.9. Selectively Requiring Authentication
Chapter 8. Securing the Mail Transport
Introduction
Recipe 8.1. Building a Private Certificate Authority
Recipe 8.2. Creating a Certificate Request
Recipe 8.3. Signing a Certificate Request
Recipe 8.4. Configuring sendmail for STARTTLS
Recipe 8.5. Relaying Based on the CA
Recipe 8.6. Relaying Based on the Certificate Subject
Recipe 8.7. Requiring Outbound Encryption
Recipe 8.8. Requiring Inbound Encryption
Recipe 8.9. Requiring a Verified Certificate
Recipe 8.10. Requiring TLS for a Recipient
Recipe 8.11. Refusing STARTTLS Service
Recipe 8.12. Selectively Advertising STARTTLS

Recipe 8.13. Requesting Client Certificates
Chapter 9. Managing the Queue
Introduction
Recipe 9.1. Creating Multiple Queues
Recipe 9.2. Using qf, df, and xf Subdirectories
Recipe 9.3. Defining Queue Groups
Recipe 9.4. Assigning Recipients to Specific Queues
Recipe 9.5. Using Persistent Queue Runners
Recipe 9.6. Using a Queue Server
Recipe 9.7. Setting Protocol Timers
Chapter 10. Securing sendmail
Introduction
Recipe 10.1. Limiting the Number of sendmail Servers
Recipe 10.2. Limiting the Number of Network Accessible Servers
Recipe 10.3. Updating to Close Security Holes
Recipe 10.4. Patching to Close Security Holes
Recipe 10.5. Disabling Delivery to Programs
Recipe 10.6. Controlling Delivery to Programs
Recipe 10.7. Disabling Delivery to Files
Recipe 10.8. Bypassing User .forward Files
Recipe 10.9. Controlling Delivery to Files
Recipe 10.10. Running sendmail Non-Set-User-ID root
Recipe 10.11. Setting a Safe Default User ID
Recipe 10.12. Defining Trusted Users
Recipe 10.13. Identifying the sendmail Administrator
Recipe 10.14. Limiting the SMTP Command Set
Recipe 10.15. Requiring a Valid HELO
Recipe 10.16. Restricting Command-Line Options
Recipe 10.17. Denying DoS Attacks
