Chapter 1. Introduction
Section 1.1. Why PHP 5?
Section 1.2. What's New in PHP 5?
Section 1.3. Installing and Configuring PHP 5
Chapter 2. Object-Oriented Programming
Section 2.1. What Is Object-Oriented Programming?
Section 2.2. Memory Management
Section 2.3. Basic Classes
Section 2.4. Class Intermediates
Section 2.5. Inheritance

Section 2.6. Magical Methods
Chapter 3. MySQL
Section 3.1. Installing and Configuring
Section 3.2. Procedural Interface
Section 3.3. Before and After: Connecting to the Database Server
Section 3.4. Object-Oriented Interface
Section 3.5. Before and After: Querying and Retrieving Data with Prepared Statements
Section 3.6. Before and After: Subselects
Section 3.7. Transactions
Section 3.8. Before and After: Making Multiple Queries
Section 3.9. Securing Connections with SSL
Section 3.10. Porting Code and Migrating Databases
Chapter 4. SQLite
Section 4.1. SQLite Basics
Section 4.2. Alternate SQLite Result Types
Section 4.3. Object-Oriented Interface
Section 4.4. Indexes, Error Handling, and In-Memory Tables
Section 4.5. Transactions
Section 4.6. User-Defined Functions
Chapter 5. XML
Section 5.1. XML Extensions in PHP 5
Section 5.2. Installing XML and XSLT Support
Section 5.3. DOM
Section 5.4. SimpleXML
Section 5.5. Converting Between SimpleXML and DOM Objects
Section 5.6. Before and After: Reading XML into a Tree
Section 5.7. Before and After: Searching XML with XPath
Section 5.8. Reading XML as Events with SAX
Section 5.9. Before and After: Creating New XML Documents
Section 5.10. Before and After: Transforming XML with XSLT
Section 5.11. Validating Against a Schema
Chapter 6. Iterators and SPL
Section 6.1. Before and After: Using Iterators
Section 6.2. Implementing the Iterator Interface
Section 6.3. MySQL Query Iterator
Section 6.4. Chaining Iterators
Section 6.5. SimpleXML Iterator
Section 6.6. Before and After: Recursive Directory Iteration
Section 6.7. Implementing the RecursiveIterator Interface
Section 6.8. Array and Object Property Iteration
Section 6.9. Redefining Class Iteration
Section 6.10. Iterator and SPL Classes and Interfaces
Chapter 7. Error Handling and Debugging
Section 7.1. Before and After: Handling Errors
Section 7.2. The Benefits of Exceptions
Section 7.3. System Exceptions
Section 7.4. The Exception Class

Section 7.5. User Exceptions
Section 7.6. Setting a Custom Exception Handler
Section 7.7. Processing Errors with a Custom Handler
Section 7.8. Debugging Functions
Chapter 8. Streams, Wrappers, and Filters
Section 8.1. Using the Streams API
Section 8.2. Wrapper Overview
Section 8.3. Wrapper Details
Section 8.4. Creating Wrappers
Section 8.5. Filtering Streams
Section 8.6. Creating Filters
Chapter 9. Other Extensions
Section 9.1. SOAP
Section 9.2. Tidy
Section 9.3. Reflection
Chapter 10. PHP 5 in Action
Section 10.1. Defining Your Database Schema
Section 10.2. The Person Class
Section 10.3. The addressBook Class
Section 10.4. The Template Class
Section 10.5. Assembling the Application
Section 10.6. Wrap-Up and Future Directions
Appendix A. Introduction to XML
Section A.1. Comparing HTML and XML
Section A.2. Well-Formed XML
Section A.3. Schemas
Section A.4. Transformations
Section A.5. XML Namespaces
Section A.6. XPath
Appendix B. Additional New Features and Minor Changes
Section B.1. Passing Optional Parameters by Reference
Section B.2. New E_STRICT Error Setting
Section B.3. Treating Strings as Arrays Causes Errors
Section B.4. CLI Now Allows Individual Line Processing
Section B.5. CLI Always Provides argv and argc
Section B.6. Oracle (oci8) Extension Functions Renamed
Section B.7. New Configuration Directives
Section B.8. Updated COM Extension
Section B.9. Apache 2 Correctly Sets PATH_TRANSLATED
Section B.10. strrpos( ) Uses the Entire Needle
Section B.11. Windows 95 Support Dropped
Section B.12. old_function Eliminated
Appendix C. Installing PHP 5 Alongside PHP 4
Section C.1. General PHP 5 Configuration
Section C.2. Module and CGI
Section C.3. Windows
Colophon
