

TABLE OF CONTENTS

CHAPTER 1

AIRCRAFT MISSION REQUIREMENTS AND PRELIMINARY ENGINE DESIGN

Design Phases	1-1
Conceptual Design	1-1
Preliminary Design	1-1
Detailed Design	1-1
Aircraft Mission Requirements and Figures of Merit	1-5
Constraint Analysis	1-8
Mission Analysis	1-13
Engine Sizing and Cycle Selection	1-13
Cycle Modelling	1-26
Component Performance	1-28
Preliminary Component Design and Matching	1-30

CHAPTER 2

STATIC STRUCTURES

Introduction	2-1
Overall Engine Structure and Major Structural Components	2-1
Design Issues	2-6
Frames	2-7
Casings	2-18
Mounts	2-21
Containment	2-29
Structural Behavior and Analytical Methods	2-31
Maneuver Loads	2-33
Pressure Loads	2-33
Thermal Loads	2-33
Unbalanced Forces	2-34
Limit Conditions	2-35
Ultimate Loads	2-35
Fatigue	2-35
Damage Tolerance	2-36
Material Properties	2-36
Structural Testing	2-40
Summary	2-42

CHAPTER 3

FAN AND COMPRESSOR SYSTEMS

Introduction	3-1
Basic Aerodynamic principles, Components, and Definitions	3-1
Vector Diagrams	3-8
Blading	3-9
Basic Equations	3-10
Performance, Stall, Surge, and Stall Margin	3-11
Trends in Compressor and Fan Design	3-13
Design and Analysis Methods	3-15
Stall Margin Correlation	3-19
Efficiency Potential Correlation	3-20
Axisymmetric Analysis	3-23
Cascade Analysis and Blade Design	3-23
Fan and Prop Fan Configurations	3-28
Variable Geometry, Clearance, and Leakage	3-30
Multi-spool, Variable Geometry and Bleed	3-30
Leakage in Compressors	3-32

Clearance Control	3-33
Summary of Aerodynamic Design Considerations	3-33
Airfoil Physical and Functional Mechanical Design	3-33
Airfoil Mechanical Design Considerations	3-46
Airfoil Loading and Environment	3-46
Airfoil Failure Mechanisms	3-49
Ingestion	3-51
Airfoil Tradeoffs and Implications for Design	3-52
Rotor Physical and Functional Description	3-52
Rotor Design Considerations	3-56
Rotor Loading and Environment	3-56
Rotor Failure Mechanisms	3-60
Fatigue	3-60
Overspeed and Burst	3-60
Vibration	3-61
Rotor Tradeoffs and Implications for Design	3-61
Fan and Compressor Casings	3-62
Casing Design Considerations	3-63
Casing Failure Mechanisms	3-63
Buckling	3-63
Vibration	3-64
Other Failures	3-64
Casing Tradeoffs and Implications for Design	3-65
Fan and Compressor Variable Vane Actuation Systems	3-65
Actuation System Design Considerations	3-68
Actuation System Failure Mechanisms	3-68
Wear	3-68
Hammershock	3-68
Actuation System Tradeoffs and Implications for Design	3-68
Fan and Compressor System Design Considerations	3-68
Containment and Vibratory Weak Link Criteria	3-68
System Vibration and Balance	3-69
Stress Analysis of Rotor Disks	3-69
Numerical Example of Rotor Disk Stresses	3-70
Casing Containment Capability	3-73
Low Cycle Fatigue Life Analysis	3-74

CHAPTER 4

COMBUSTOR AND AUGMENTOR DESIGN

Combustor Aerodynamic Design	4-1
Introduction	4-1
Performance Requirements	4-1
Combustion Efficiency	4-1
Total Pressure Loss	4-1
Temperature Rise	4-1
Combustor Exit Pattern Factor	4-4
Combustor Exit Temperature Profile	4-4
Altitude Relight	4-4
Emission Requirements	4-5
Critical Design Parameters	4-5
Space Rate and Aerodynamic Loading Parameters	4-5
Reference Velocity	4-6
Combustor Dome Height	4-6
Combustor Dome Velocity	4-6
Combustor Length to Dome Height Ratio	4-6
Combustor Passage Velocity	4-6

Number of Fuel Injectors	4-8
Pattern Factor Correlations	4-8
Combustor Flow Distribution	4-9
Fuel Injection System	4-9
Dilution Zone	4-9
Liner Coolong	4-11
Combustor Mechanical Design	4-11
Combustor Analysis	4-13
Fuel Nozzle Design	4-15
Ignition System	4-18

CHAPTER 5

TURBINES

Turbine Aerodynamic Design	5-1
Introduction	5-1
Principles of Operation	5-6
Cycle (or Thermodynamic) Point of View	5-6
Turbine Aero Point of View	5-8
Radial Equilibrium	5-10
Performance Considerations	5-10
Basic Performance Parameters	5-10
Stage Flow Coefficient	5-11
Reaction	5-13
The Turbine Map	5-15
Turbine Loss Sources	5-15
Design considerations	5-24
Cooling Considerations	5-24
Turbine Testing	5-28
Turbine Mechanical Design	5-30
High Pressure Turbine Function	5-30
Design Considerations and Goals	5-30
Turbine Operating Conditions	5-31
High Pressure Stator Component Parts	5-33
HPT Combustor Casing	5-33
Inner Nozzle Support and Inducer	5-33
HP Nozzle	5-34
HP Turbine Shroud	5-34
Static Seals	5-36
HP Rotor Component Parts	5-36
Compressor Discharge Seal (CDP) Disk	5-37
Forward Shaft	5-37
Forward Outer Seal (FOS) Disk and Retainer	5-37
HP Disk	5-38
Aft Retainer	5-38
Aft Shaft	5-38
HP Blade	5-39
The Mechanical Design Process	5-39
The Basic Design	5-41
Preliminary Design	5-41
Engineering Drawings	5-42
Working The Details	5-42
Component and Factor Testing	5-47
Final Certification Analysis	5-47
Low Pressure Turbine Design	5-50
Low Pressure Turbine Rotor Components	5-50
Blades	5-50

LPT Disks	5-50
Interstage Seals	5-50
Blade Retainers	5-52
Shafting	5-52
Low Pressure Turbine Stator Components	5-53
LPT Nozzles	5-53
Shrouds	5-53
Interstage Seals	5-53
Pressure Balance Seal	5-53

**CHAPTER 6
ENGINE QUALIFICATION AND CERTIFICATION**

Engine Qualification	6-1
Master Test Plan	6-1
Program Master Plan	6-1
Engine Spec and Program Master Plan	6-1
Qualification for Production Release	6-1
Engineering Program Plan	6-1
Design Reviews	6-7
Component Qualification	6-7
Corrosion Qualification	6-13
Altitude Qualification	6-14
Endurance Testing	6-14
Operability Evaluation	6-14

**CHAPTER 7
BEARINGS AND SEALS**

Introduction	7-1
Mainshaft Bearing Types	7-1
Fatigue Life Considerations	7-4
Ball Dynamic Analysis	7-8
Heat Generation and Cooling	7-10
Clearance Control	7-13
Cage Slip	7-14
Preloading of Roller Bearings	7-15
Roller Skewing and End Wear	7-15
Static Capacity/Secondary Damage	7-16
Elastohydrodynamic Lubrication	7-16
Materials	7-18
Dynamic Seal Types	7-20
Labrinth Seals	7-20
Clearance Control	7-20
Stick Slip Instability	7-22
Out of Round Instability	7-22
Campbell's Criterion	7-23
1/Rev Excitation	7-23
Aeroelastic Instability	7-23
Rotor-Stator Interaction	7-23
Acoustic Coupling	7-23
Damping	7-25
Configuration and Materials Consideration	7-25
Carbon Seal Design	7-25
Circumferential Seals	7-25
Face Seals	7-27
Pressure Balanced Split Ring Intershaft Seal	7-27
Split Ring Unbalanced Intershaft Seal	7-27
Materials	7-27

Sump Design	7-30
Oil Scavenging	7-30
Fire Safety	7-30
Coking	7-30
Interference Fitting of Bearing Rings	7-30
Bearing Support Stiffness	7-31
Thermal Out of Round	7-31
False Bearings	7-31
Titanium Fires	7-31

**CHAPTER 8
SECONDARY SYSTEMS**

Introduction	8-1
Ait Systems	8-1
HPT Cooling System	8-1
LPT Cavity Purge System	8-5
Parasitic Leakage Purge System	8-5
Heating Systems	8-9
Anti-Icing/De-Icing	8-9
CDP Seal Bore Heating	8-9
TRF Hub Heating	8-9
Clearance Control Systems	8-9
Flange Cooling	8-10
LPT Case Cooling	8-10
HPC Bore Cooling	8-10
Seal Pressurization	8-10
Labyrinth Seals	8-14
Customer Bleed	8-16
Oil Systems	8-16
Lube Supply System	8-16
Lube Tank	8-17
Lube Pump	8-17
Lube Pipe Lines and Jets	8-17
Lube Scavenge System	8-19
Lube Scavenge Pump	8-19
Fuel Iql Cooler	8-19
Chip Detectors	8-19
Sump Vent System	8-21
Ait-Oil Separators	8-21
Oil Consumption	8-23
Oil Filtration	8-23
Lube Heat Rejection	8-23
Fire Safety Analysis	8-23
Sump/Support Heat Transfer Analysis	8-23
Axial Bearing Thrust Control	8-26
HP Rotor Thrust	8-26
Interfaces	8-26

**CHAPTER 8
INLETS AND EXHAUST SYSTEMS**

Aerodynamic Aspects of Inlets and Exhaust Systems	9-1
Introduction	9-1
Inlet Design	9-1
Elements of the Subsonic Inlet	9-1
Inlet Performance	9-1
Low Speed Design Considerations	9-4

Exhaust Nozzles	9-6
Elements of the Exhaust System	9-6
Flowpath Design Considerations	9-7
Exhaust System Performance	9-8
Thrust Reverser	9-8
Elements of the Thrust Reverser System	9-8
Reverser Flowpath Considerations	9-8
Reverser Performance	9-9
Nacelle Design	9-9
Elements of the Nacelle	9-9
Nacelle Performance	9-9
Installed Performance	9-10
Acoustic Considerations	9-10
Mechanical Aspects of Inlets and Exhaust Systems	9-11
Mechanical Design of Inlet	9-11
Lightening Zones	9-16
Commercial High By-Pass Fan Nozzle/Reverser	9-19
Fan Reverser	9-19
Fixed Structure Component System	9-22
Bulkhead Sidewalls	9-22
Inner Cowl	9-22
Outer Support Assembly	9-22
Vane Deflectors	9-22
Translating Cowl	9-22
Fan Reverser Opening System	9-22
Blocker Doors	9-22
Fan Reverser Control Actuation System	9-22
Supply Manifold	9-25
Deploy Operation	9-25
Stow	9-25
Commercial High By-Pass Primary Exhaust System Design	9-26
Lightening strikes	9-26
Abnormal Condition Requirements	9-26
Structural Property Variables	9-27
Weight and Producibility	9-27
Military Afterburning Variable Nozzle System	9-27
Components and Operation	9-29

CHAPTER 10

INSTALLATION AND CONFIGURATION

Commercial Propulsion System Installation	10-1
Commercial Nacelle Systems	10-1
Inlet	10-4
Engine Buildup (EBU) Hardware	10-5
Exhaust System	10-10
Military Engine Installations	10-10
Engine Installation Design Considerations	10-10
Installation Considerations Affecting Engine Maintainability	10-10
Engine Envelope	10-16
Engine-Airframe Interfaces	10-16
Configuration	10-25
Design Philosophy	10-25
Design Approach	10-25
Technical Requirements	10-33
Design Practices	10-33
Design Reviews	10-34

Design Tools, Assembly Aids, and Customer Mockups	10-36
Engineering Design Tool	10-36
Assembly Aid	10-37
Mockup	10-37
Production Engine Assemblies	10-37

CHAPTER 11
CONTROLS ENGINEERING

Introduction	11-1
Applications	11-1
Control System Requirements	11-1
Control Philosophy	11-5
Controls Terminology	11-5
Control Strategy	11-5
Developing Requirements	11-5
Control System Design	11-8
Stability and response	11-9
Definitions and Nomenclature	11-9
Design Requirements	11-14
Design Tools and Methods	11-16
Basic Engine Control Functions	11-17
Core and Fan Speed Control	11-17
Acceleration and Deceleration Control	11-19
Variable Stator Vane control	11-21
Speed and CDP Min and Max Limiting	11-23
Commercial Controls Objectives	11-26
Power Management Control	11-26
Idle Speed Control and Scheduling	11-35
Variable Bleed Valves (VBV's)	11-37
Turbine Clearance Control and Rotor Active Clearance Control	11-39
Reverse Thrust Scheduling	11-44
Military Control Objectives	11-45
Fan Inlet Guide Vane Control	11-45
Turbine Temperature Control	11-45
Fan Operating Line Control	11-46
Augmentor Fuel Scheduling	11-50
Special Functions	11-54
Component Design	11-55
Hydromechanical Control	11-57
Main Engine Controls (MEC's)	11-59
Hydromechanical Units (HMU's)	11-62
Augmentor Fuel Control	11-62
Other Control Components	11-66
Pumps	11-66
Actuators	11-69
Valves	11-71
Sensors	11-74
Electronic Controls	11-78
History	11-78
Environmental Design Factors	11-81
Temperature	11-81
Vibration	11-81
Lightening	11-81
Electromagnetic Interference	11-82
Nuclear Radiation	11-82

Digital Controls	11-82
Definition	11-82
Comparison to Analog	11-87
Redundancy Management	11-91
Adjustment Capability	11-92
Maintainability Features	11-93
Aircraft Bus Interfaces	11-94
Throughput	11-94
Resolution	11-96
Sampling and Digital-to-Analog Conversion	11-97
Software	11-99
Real-Time Software	11-99
Development Process	11-99
Functional Allocation	11-100
CHAPTER 12	
LIFE ANALYSIS	
Qualification/Certification, Life Analysis	12-1
Commercial Life Analysis	12-1
Thermal Analysis	12-1
Stress Analysis	12-2
Flight Cycle	12-6
Materials Data	12-7
Military Approach	12-11
Life Analysis Summary	12-12
CHAPTER 13	
PRODUCT SUPPORT	
Product Support	13-1
Maintenance	13-3
Field Related Problems	13-5
Engine Aging	13-6
Condition Monitoring	13-8
End User Assessment	13-9
