

CONTENTS

Introduction	2
0. Algorithms for Polynomials	4
1. Algebraic Sets	14
2. Affine Algebraic Varieties	30
3. Algebraic Varieties	44
4. Local Study: Tangent Planes, Tangent Cones, Singularities	59
5. Projective Varieties and Complete Varieties	80
6. Finite Maps	101
7. Dimension Theory	109
8. Regular Maps and Their Fibres.	117
9. Algebraic Geometry over an Arbitrary Field	131
10. Divisors and Intersection Theory	137
11. Coherent Sheaves; Invertible Sheaves.	143
12. Differentials	149
13. Algebraic Varieties over the Complex Numbers	151
14. Further Reading	153
Index	156
