

2 CORBA Overview	<u>5</u>
2.1 Objects and Classes	<u>7</u>
2.2 Encapsulation	<u>7</u>
2.3 Modularity and Scoping	<u>8</u>
2.4 Inheritance	<u>8</u>
2.5 Method Overloading	<u>8</u>
2.6 Exceptions	<u>9</u>
2.7 Hello World Example	<u>9</u>
3 Overview of C++ ORBs	<u>11</u>
3.1 Terminology	<u>11</u>
3.2 Clients and Servers as C++ Applications	<u>12</u>
3.3 Clients and Servers Implemented with Non-C++ ORBs	<u>15</u>
4 Building a First C++ ORB Application	<u>17</u>
4.1 Summary of the CORBA Development Process	<u>18</u>
4.2 Environment Setup	<u>19</u>
4.3 Interface Specification	<u>19</u>
4.4 Compiling the IDL	<u>20</u>
4.5 A Client as a C++ Application	<u>21</u>
4.6 Object Implementation	<u>23</u>
4.7 A Server as a C++ Application	<u>24</u>
4.8 Compiling the Server and the Client	<u>26</u>
4.9 Running the Application	<u>27</u>
Chapter 2	<u>29</u>
CORBA Overview	
1 The Object Management Group	<u>30</u>

1 The Object Management Group	<u>29</u>
1.1 OMG's Goals	<u>30</u>
1.2 The Organizational Structure of the OMG	<u>30</u>
1.3 OMG Technology Adoption Process	<u>34</u>
2 The Object Management Architecture	<u>35</u>
2.1 Overview of the OMA	<u>36</u>
2.2 Core Object Model	<u>36</u>
2.3 The Reference Model	<u>41</u>
3 Common Object Request Broker Architecture	<u>44</u>
3.1 Overview	<u>44</u>
3.2 Object Model	<u>46</u>
3.3 ORB Structure	<u>49</u>
3.4 OMG Interface Definition Language (IDL)	<u>52</u>
3.5 ORB and Object Interfaces	<u>63</u>
3.6 Basic Object Adapter	<u>71</u>
3.7 The Portable Object Adapter	<u>75</u>
3.8 Language Mappings	<u>84</u>
3.9 Interoperability	<u>85</u>
3.10 TypeCode, Any, and DynAny	<u>87</u>
3.11 Dynamic Invocation and Dynamic Skeleton Interfaces	<u>92</u>
3.12 Interface Repository	<u>94</u>

Chapter 2	Interface Repository	27
Chapter 3	OMG IDL to C++ Mapping	107
1	Mapping Modules	107
2	Mapping Basic DataTypes	108
3	Mapping Strings	109
4	Mapping Constants	111
5	Mapping Enumerations	112
6	Mapping for Structured Types	112
6.1	Mapping for Struct Types	114
6.2	Mapping Union Types	116
6.3	Mapping Sequence Types	118
6.4	Mapping for Arrays	121
6.5	Mapping Typedefs	123
6.6	Mapping the Type Any	124
7	Mapping for the Exception Types	130
8	Mapping Operations and Attributes	131
9	Argument Passing	133
9.1	Examples	136
10	Mapping of Interfaces	163
10.1	Client-Side Mapping	163
10.2	Server-Side Mapping	163

Chapter 4	<u>167</u>
ORB Runtime System	
1 Object Interface	<u>168</u>
1.1 get_implementation()	<u>168</u>
1.2 get_interface()	<u>168</u>
1.3 is_nil()	<u>169</u>
1.4 duplicate() and release()	<u>169</u>
1.5 is_a()	<u>169</u>
1.6 non_existent()	<u>169</u>
1.7 is_equivalent()	<u>170</u>
1.8 hash()	<u>170</u>
1.9 create_request()	<u>170</u>
2 ORB Interface	<u>171</u>
2.1 ORB Initialization	<u>171</u>
2.2 Converting Object References into Strings and Vice Versa	<u>171</u>
2.3 Obtaining Initial References	<u>172</u>
2.4 BOA Initialization	<u>173</u>
2.5 POA Initialization	<u>173</u>
3 Basic Object Adapter	<u>173</u>
3.1 Activation and Deactivation	<u>173</u>
3.2 Other Operations	<u>174</u>
4 TypeCodes	<u>175</u>
4.1 Interface TypeCode	<u>175</u>
4.2 Creating TypeCodes	<u>176</u>

4.2 Creating a Process	<u>172</u>
5 Dynamic Invocation Interface	<u>182</u>
5.1 Common Data Structures	<u>182</u>
5.2 Creating an NVList	<u>183</u>
5.3 NVList Interface	<u>183</u>
5.4 DII Request	<u>184</u>
5.5 Creating a Request	<u>184</u>
5.6 Request Interface	<u>185</u>
6 Dynamic Skeleton Interface	<u>187</u>
6.1 ServerRequest Interface	<u>188</u>
7 Context Interface	<u>188</u>
7.1 Creating a Context Object	<u>189</u>
7.2 Manipulating a Context Object	<u>189</u>
7.3 Manipulating the Context Object Tree	<u>190</u>
8 Portable Object Adapter	<u>191</u>
8.1 POA Policies	<u>191</u>
8.2 POAManager Interface	<u>195</u>
8.3 AdapterActivator Interface	<u>197</u>
8.4 ServantActivator Interface	<u>198</u>
8.5 ServantLocator Interface	<u>199</u>
8.6 POA Interface	<u>201</u>
8.7 Current Operations	<u>207</u>

Chapter 5	<u>209</u>
Discovering Services	
1 Bootstrapping	<u>209</u>
2 The CORBA Naming Service	<u>210</u>
2.1 Overview of the Naming Service	<u>210</u>
2.2 Interface Specification	<u>211</u>
2.3 Using the Naming Service from a C++ Client	<u>218</u>
3 Trading Service	<u>221</u>
3.1 Overview of Trading	<u>222</u>
3.2 Overview of the Trading Service Interfaces	<u>226</u>
3.3 Exporting a Service Offer	<u>238</u>
4 Domains	<u>257</u>
5 Proprietary Object Location	<u>258</u>
Chapter 6	<u>261</u>
Building Applications	
1 Application Specification	<u>261</u>
1.1 IDL Specification	<u>263</u>
2 Implementing Objects	<u>264</u>
2.1 Implementing the Meeting Object	<u>264</u>
2.2 Implementing the Room Object	<u>265</u>
3 Building Servers	<u>268</u>
3.1 Initializing the ORB	<u>270</u>
3.2 Creating an Object, Registering with the Root POA	<u>270</u>
3.3 Registering with the Naming Service	<u>271</u>

3.3 Registering with the Naming Service	271
3.4 Entering the ORB's Event Loop	272
4 Building Factories	272
4.1 Meeting Factory Object Implementation	273
4.2 Meeting Factory Server	274
5 Starting Servers	276
6 Building Clients	277
6.1 Client Application	278
6.2 Methods in the Client Application	279
7 Extensions to the Example Application	287
Chapter 7	289
Advanced Features	
1 The Extended Hello World Example	289
1.1 Interface Specification	289
1.2 A Client	290
1.3 Servant Implementation	292
2 The Any Type and TypeCodes	294
2.1 Interface Specification	294
2.2 Object Implementation	295
2.3 Client Implementation	297
3 Interface Repository and Dynamic Invocation Interface	301
3.1 Initializing the ORB	302

3.1 Initializing the ORB	302
3.2 Browsing the Interface Repository	304
3.3 A Simple Unparser	305
3.4 Initializing Requests	307
3.5 Creating Supporting Objects	307
3.6 Using the Supporting Objects	309
3.7 Creating and Invoking a Request Object	310
3.8 Getting Results	310
3.9 Executing the Client	312
4 Dynamic Skeleton Interface	314
5 Tie Mechanism	317
6 IDL Context	321
6.1 Creating a Context	321
6.2 Invoking the Method	322
6.3 Getting Values from the Context	322
Glossary	325
Index	331

Foreword

While it may seem somewhat retrograde in 1999 to publish a book which centers on C++ (rather than the hot C-based language, Java), this book will find an important place in the library of programmers everywhere. Even as Java turns 35 in dog years (oops, I guess I mean Internet years!), or about five in human reckoning, according to most surveyors of the programming scene C++ is still the primary C-based language, especially in mission-critical, high-performance systems. Fortunately, the CORBA technology discussed in this tome (as was
