Preface.	ix
Acknowledgments	xiii

Part I: Getting Started with ColdFusion MX 1

Chapter 1: Introducing ColdFusion MX 3

Why a Tag-Based Language?	3
ColdFusion Can Be Extended In Many Ways	4
What You Need To Get Started	5
An Overview of What's New in ColdFusion MX.	6
Tag-based user defined functions	6
ColdFusion components	6
Flash Remoting services	6
Web services	7
Native XML handling	7
Simplified security.	8
Simplified Verity administration	9
Simplified locking	9
Java Server Pages integration	9
Extended graphing capabilities.	10
Enhanced query of queries	10
Enhanced structured exception handling.	10
Enhanced debugging capabilities	11
Enhanced regular expressions	11
Summary.	11

Chapter 2: Writing Your First ColdFusion MX Application 13

Your First ColdFusion Application	13
Some terms	13
What you'll need	14
Preparing your Web environment	14
Setting up the database	14
Planning Program Flow.	15
Think in terms of processes	15
Think in terms of data	15
Setting Up the Framework For Your Application	16

Adding a Company to the Database	17
Building the company add form	17
Building the company add action template.	19
The finished template	20
What just happened?	21
Getting a List of Companies	24
Building the company list	24
Using a SELECT statement	25
Displaying the results of a query.	25
Modifying a Company in the Database	26
Choosing a company to edit	26
Building the company edit form	27
Building the company edit action template.	30
What just happened?	31
Removing a Company From the Database	33
Choosing a company to delete	33
Creating the company delete form	34
Confirming the deletion of a company before performing the action	36
Creating the company delete action template	36
Using a DELETE statement	36
Adding a New Employee to the Database	36
Building the employee add form	37
Creating the employee add action template	39
What was that CFSELECT tag?	40
Getting a List of Employees	41
Creating the employee list	41
Using DateFormat() to make the date look natural to the user	42
Modifying an Employee in the Database	43
Choosing an employee to edit	43
Building the employee edit form	44
Creating the employee edit action template	47
Removing an Employee From the Database	47
Choosing an employee to delete	47
Building the employee delete form	48
Creating the employee delete action template	50
Creating a Launch Pad	51
Making Your Application Better	52
Creating a footer at the bottom of every page	52
Showing a company's employees	52
Making direct links to the add, view, and delete forms	54
Redirecting the user back to the company list	56
Sending a welcome e-mail to a new employee	56
Setting a cookie in the employee list.	57
Extending Your Application by Using a Custom Tag	59
Writing the custom tag	59
Calling the custom tag.	59
Extending the custom tag with attributes.	60

Congratulations!	61
Summary	61
Chapter 3: Using ColdFusion MX Tags and Functions	63
ColdFusion Expressions	63
Using operators	64
Using function calls	69
Pound Signs	69
Where and where not to use pound signs	69
Knowing where and where not to use CFOUTPUT	71
How to escape pound signs	72
Using CFOUTPUT blocks of code	73
How to Use Tags	74
Empty tags	74
Paired tags	74
Shorthand closing syntax	74
Comments	74
Summary	75
Chapter 4: Understanding Servers and Clients	77
What Is a Server, and What Is a Client?	77
CFML and JavaScript	79
Integrating CFML and JavaScript	80
Summary	82
Chapter 5: Learning a Little SQL	83
An Overview of Relational Databases	83
An Overview of Structured Query Language (SQL)	87
SELECT Statements	88
INSERT Statements	95
UPDATE Statements	100
DELETE Statements	101
Summary	106
Chapter 6: Using ColdFusion Forms	109
Implementing Client-Side Validation	109
Using CFINPUT	111
Where you cannot use CFINPUT	111
Using CFSELECT	113
Using check boxes and radio buttons	114
Implementing Server-Side Validation	116
Graphical User Interface Widgets	117
CFSLIDER	117
CFTEXTINPUT	118
CFTREE	118
Populating a CFTREE control from a query	119
CFGRID	120

The Caveats of Using CFFORM	123
Summary	123

Chapter 7: Testing Your Code. 125

Development Testing	125
Test harnesses	125
Unit testing with bad data	126
Structured exception handling	127
Application testing	128
How to test your application	128
Testing your application with bad data	129
Browser woes	130
Empty-nest testing	132
Regression testing	132
Load testing	132
Debugging Your Code	133
Debug settings.	133
Using CFDUMP	134
The integrated debugger.	135
Summary	135

Part II: Using ColdFusion MX with Databases 137

Chapter 8: Database Design Issues 139

Relational Database Basics.	139
What is a “relational database?”	139
Describing relationships	144
Types of Relationships	149
Creating your physical data model	152
Referential integrity.	154
Normalization	159
Denormalization.	161
Defaults.	162
Check constraints.	163
Creating a Scalable Database.	164
Index design	164
Data Description Language (DDL)	170
Don’t try to get OLAP out of an OLTP database.	178
Summary	179

Chapter 9: Putting Databases to Work 181

Understanding All Relational Result Sets	181
How to Visualize What is Possible and Impossible	
Within an SQL Statement	188
SQL’s processing order of precedence	189
How and when to use GROUP BY, HAVING, and DISTINCT.	194

Structured Exception Handling	198
Query Caching	201
Watch your memory!	203
You can't use CFQUERYPARAM	203
Caching stored procedures	203
Summary	204

Chapter 10: Using Advanced Database Techniques 205

Transactions	205
Understanding transactions	206
Where to control a transaction	207
CFTRANSACTION and exception handling	209
Transaction isolation	211
Views	214
Horizontal and vertical masking	215
Relational views	216
Precompiling queries	216
Enhancing security	217
Caveats	217
Stored Procedures	218
What is a stored procedure?	218
The three components of calling a stored procedure	223
Oracle stored procedures and packages	232
Practical things that you can do in using stored procedures	242
Summary	250

Chapter 11: More Advanced Database Techniques. 251

Triggers	251
Triggers and implicit transactions	252
Where DRI constraints alone just don't do	254
Getting the database to do the work for you	258
Affecting single and multiple rows	260
Instead-Of triggers	265
Oracle triggers	267
Practical things that you can do by using triggers	270
Eliminating the Need for Post-Processing Data Within ColdFusion	273
Effective Use of ColdFusion MX's Enhanced Query of Queries	275
Performing relational joins between ColdFusion query objects	276
Querying a query object	278
Caveats and restrictions	279
Don't be tempted to post-process data	280
Getting multi-dimensional results	280
Leveraging QoQ by using query caching	284
Data Binding	284
CFQUERYPARAM	285
Caveats	286
Summary	286

Part III: The ColdFusion MX Language**289****Chapter 12: Understanding ColdFusion Variables 291**

What Is Meant By Scope?	291
Local Variables	292
The Variables scope	292
The Attributes scope	293
The Caller scope	294
Global Variables	294
Nonpersistent global variables	294
Persistent global variables	296
Testing for Variables	303
Summary	304

Chapter 13: Constructing Flow Control. 305

If/Else/Else Constructs	305
Switch/Case Constructs	306
Loop Constructs	307
Looping a specified number of times.	308
Looping while a condition is true.	309
Looping over a query.	310
Looping over a list	310
Looping over a structure.	311
Breaking out of a loop	311
Including One Template's Code in Another	312
Redirecting the User to a Different Location	314
Stopping a Page's Execution	315
Summary	315

Chapter 14: Creating Lists and Arrays 317

Using Lists	317
Creating a list	317
Adding an item to a list.	317
Deleting an item from a list	318
Finding an item in a list.	318
Getting an item from a list by the item's index	319
GetToken() vs. ListGetAt().	320
Getting the length of a list	320
Looping over a list	321
Choosing a list's delimiters	321
Dealing with empty elements	322
Changing a list's delimiters	322
Sorting list elements	323
Qualifying list elements	323

Using Arrays	324
Creating an array	324
Referring to an array element	325
Adding an item to an array	325
Deleting an item from an array	326
Getting information about an array.	327
Finding an item in an array	327
Using aggregate functions	327
Swapping elements in an array	328
Sorting array elements	328
Resizing an array	329
Converting Between Lists and Arrays.	330
Choosing Between Lists and Arrays.	330
Summary	330

Chapter 15: Working with Structures 333

What is a Structure?	333
Creating a Structure.	333
Adding an Element to a Structure	334
StructInsert() vs. StructUpdate()	334
Using dot notation	334
Using associative array notation	335
Retrieving an Element From a Structure	336
Removing an Element From a Structure	336
Getting Information About a Structure	337
Looping Over a Structure.	337
Nested Structures	338
Complex nesting	339
How dot notation automatically creates a nested structure	341
Sorting a Structure	342
Copying a Structure	346
Using Variable Scopes as Structures	348
Other Structure Operations	349
Merging two structures	349
Finding a key or value deep in a nested substructure	350
Summary	352

Chapter 16: Scripting ColdFusion with CFSCRIPT 353

What is CFSCRIPT?	353
How to use CFSCRIPT	355
Setting variables in CFSCRIPT	356
If constructs in CFSCRIPT	356
Switch constructs in CFSCRIPT	357
Looping constructs in CFSCRIPT	358
Looping a set number of times	358
Looping while a condition is true.	359

Looping over a structure	360
Breaking out of a loop	360
Skipping an iteration of a loop	360
Comments in CFSCRIPT	360
Advantages of CFSCRIPT	361
Summary	361

Chapter 17: Building User-Defined Functions 363

Building UDFs by Using CFSCRIPT	363
UDF structure	363
The var keyword	364
The return keyword	365
Defining function arguments	365
Calling one function from another	366
Calling functions recursively	366
Passing structures to functions	367
Building UDFs by Using CFFUNCTION	367
The var keyword	367
CFRETURN	367
Defining function arguments	368
Required arguments	368
Choosing Between CFSCRIPT and CFFUNCTION	368
Using the Arguments Collection	369
Calling a function by Using CFINVOKE	370
Specialized functions	372
Where to Put Your UDFs	373
Summary	373

Chapter 18: Writing Custom Tags 375

Writing Custom Tags	375
Using a custom tag versus using a CFINCLUDE	377
Using the Caller scope	378
Uses of custom tags	378
How custom tags have changed	379
Modifying Content by Using Paired Custom Tags	379
Getting content between the opening and closing tags	381
What can or should a paired tag do?	382
How paired tags are executed	383
Creating tag families	383
Associating a child tag with its parent	384
Getting the parent to communicate with its child	386
The difference between GetBaseTagData() and the Caller scope	387
Passing Attributes	388
Organizing Your Code	388
Using the Request Scope	390
Recursively Calling a Custom Tag	390

Exiting a Tag Before It is Finished	392
Using the ExitTag method	392
Using the ExitTemplate method.	393
Using the Loop method	394
Using the New CFIMPORT tag	396
Summary	396

Chapter 19: Maintaining State 399

What is State Management?	399
How ColdFusion Manages State	400
Identifying a session by using CFID and CFTOKEN	400
Expiring a session after it times out	402
Storing Client Variables	402
How ColdFusion Can Use J2EE to Maintain Sessions	403
Building a Framework	405
Using Application.cfm and OnRequestEnd.cfm	405
What CFAPPLICATION does	405
Summary	406

Chapter 20: Form Validation 407

When and Why to Use Validation	407
Automatic Validation on the Server by Using Hidden Form Fields	408
The hidden field “directive”	409
What’s going on, really?	410
Improving the error message	411
Improving the page appearance	412
The problem with backing up in the browser	412
Other automatic server-side validations available	413
Automatic Validation on the Client by Using CFForm and JavaScript.	416
Introducing CFFORM	416
Adding validation by using CFINPUT	418
Improving the error message	418
Other automatic server-side validations available	420
Some limitations of client-side validations	420
Validating CFINPUT by using regular expressions	421
CFSELECT validation	423
Alternative JavaScript processing	423
Hand-Coded Validation on the Client by Using JavaScript	423
Testing the length of a TEXTAREA field	423
Other hand-coded client-side validations that you may consider	424
qForms: A Third-Party Solution for Validation	425
Hand-Coded Validation on the Server by Using CFML	425
Performing additional validations	426
Performing data processing/integrity checks	426
Backing up client-side validation	426
Summary	427

Chapter 21: Handling Exceptions 429

What Is Structured Exception Handling?	429
Catching an Error with CFTRY and CFCATCH	430
Types of catch handlers	431
What can I do if an error occurs?	435
Using CFCATCH variables	436
Making decisions by using the CFCATCH variables.	437
Rethrowing an error you don't want to handle as an exception	439
Throwing a custom error	440
Throwing and catching Java exceptions	441
Using try and catch in CFSCRIPT	442
Using CFERROR	442
Using the Site-Wide Error Handler.	444
Using the Log Files	444
Summary	445

Part IV: ColdFusion MX Components, Web Services, and Flash Integration 447

Chapter 22: Understanding ColdFusion MX Components. 449

What Is a Component?	449
A simple example	450
Separating logic from presentation.	456
Get used to passing messages.	457
The Nickel Tour of objects.	457
Components are similar to objects	459
Invoking a Component Function.	460
Persistent Components	463
Why use a persistent component?	463
The elements of a persistent component	464
Security	476
Access Levels	477
Advanced Component Concepts	478
Void functions	478
Packages	479
Inheritance.	482
Summary	486

Chapter 23: Building Your First ColdFusion Components 487

The Application That You're Going to Build	487
Building the Company Component	490
Building the Employee Component	501

Using Your New Components	524
Building the View layer.	524
Building the Controller layer	533
Supporting files	536
Exercising (and exorcising) the application that you just built.	537
Caveats and Warnings.	538
Variable leakage.	538
Function-name collision	539
CFINCLUDE and the Arguments scope	540
J2EE clustering caveats	540
Synchronizing component properties by using datastores	540
Documenting Components	540
Component metadata	546
Specifying your own custom metadata.	548
Summary	548

Chapter 24: Migrating Custom Tags and UDFs to Components . . . 551

Choosing an Implementation Method.	551
Qualifying Questions	552
Migrating User-Defined Functions to Components	554
Migrating Custom Tags to Components	554
Summary	555

Chapter 25: Building Web Services with ColdFusion MX 557

What Is a Web Service?	557
Publishing Your First Web Service.	558
Building the component functions	558
Testing your Web service	560
Consuming Your First Web Service	561
Creating an alias in ColdFusion Administrator	562
Implementing the consumer as a custom tag	562
Web-Service Details and Caveats	566
No spaces or special characters in URL	566
Exception handling	566
Authentication and authorization	567
Summary	568

Chapter 26: Flash Remoting Services 569

How Flash Remoting Works	569
What you need to install for this chapter	571
Building a Flash Remoting Application	572
Building the ColdFusion component	572
Building the Flash movie.	574
Building the ActionScript	580
Testing the application.	585

Details and Caveats	585
Publishing your Flash movie	585
Using Flash Remoting with .cfm templates	586
Integrating Web services with Flash Remoting	587
Creating paged data displays	588
Return numeric 1 or 0 rather than Boolean literal	588
Securing Flash Remoting applications	589
Summary	589

Chapter 27: Using Server-Side ActionScript 591

External ActionScripts as Data Providers	591
External ActionScripts as Remote Agents	595
Summary	596

Part V: Integrating ColdFusion MX with Other Technologies

597

Chapter 28: Integrating ColdFusion MX and Java. 599

Using J2EE Sessions	600
Enabling J2EE Sessions.	600
New SessionIDs	600
Benefits of J2EE sessions.	601
Challenges with J2EE sessions	602
Calling JSP Custom Tags	604
Locating JSP custom tags	605
Downloading a JSP custom tag into the correct CF MX directories.	605
Restart the CF MX Server	606
Use CFIMPORT and your JSP custom tag in CFML	606
Some challenges with using JSP custom tags	607
Examples of useful JSP custom tags	608
Using Applets	609
Leveraging the Java API by Using CFOBJECT	609
Making use of the Java libraries.	609
Accessing the Java API of third-party products and in-house Java objects	611
Running JavaServer Pages and Servlets within CF MX	611
Running JSPs within ColdFusion MX Enterprise	611
Running Java Servlets within ColdFusion MX, Professional or Enterprise	613
Interactions Between CFML and JSPs/Servlets	615
Calling Java CFX Custom Tags	616
Example Java CFX tags included in CF MX.	616
Automatic compilation of Java CFX custom tags	616
Configuring the Administrator to enable Java CFX custom tags	617
Calling the Java CFX custom tag	619

Other Java Integration Topics (and Learning More)	619
Summary	620

Chapter 29: Integrating COM. 621

Examples of Using COM.	621
Creating a COM Object	624
Getting and Setting an Object's Properties.	626
Calling an Object's Methods	627
Advanced COM Concepts	628
Inspecting COM classes, interfaces, and type libraries by Using OLEView	629
Finding a class's CLSID or ProgID	629
Finding a library or class containing certain functionality	631
Finding documentation for a class	631
Finding documentation for a type library	631
Finding documentation for an interface	632
Interpreting method and property definitions	632
COM Caveats	634
Summary	635

Chapter 30: Integrating ColdFusion MX with XML and WDDX 637

Web Distributed Data Exchange (WDDX).	637
What is XML?	642
Attributes vs. elements.	642
Empty elements	644
XML documents vs. XML objects	644
Case sensitivity	647
Accessing nodes	647
Manipulating an XML object.	648
Creating XML from database content	651
The Employee Directory	653
Using XPath to Search XML	654
Using XSL Transformations	659
Basic transformations	660
Using if and choose statements.	668
Looping over nodes.	671
Using named templates	673
Putting it all together: A complex transformation	675
Summary	680

Chapter 31: Communicating via Mail, FTP, and HTTP 681

Sending E-mail by Using CFMAIL	681
The simplest CFMAIL.	682
Varying the TO address	682
Varying the message body.	683

Sending a number of e-mails at once	684
Sending a single message showing multiple records	685
Still more possibilities	686
Sending attachments	686
Behind the scenes	687
Other mail-handling possibilities	688
Transferring Files by Using CFFTP.	688
Connecting one time for file/directory operations	689
Using “cached connections” for multiple operations	690
Other useful FTP options	691
Connecting to Other Web Servers by Using CFHTTP	691
Grabbing someone else’s Web page	692
Troubleshooting and understanding CFHTTP.	697
Submitting a form without submitting the form	699
Reading a flat tabular file as a query result set	701
Summary	703

Part VI: Extending Your ColdFusion MX Applications 705

Chapter 32: Adding Useful ColdFusion MX Features to Your Application 707

Running Unattended Tasks by Using CFSCHEDULE	
or the Administrator Scheduled Task Page	708
Adding a scheduled task	708
Using the CFSCHEDULE tag to add a task	711
Reading, Writing, Manipulating, and Uploading Files by Using CFFILE	711
Reading/writing files on the server	712
Manipulating files on the server	714
Uploading files from browser to server	714
Possible tag restrictions	718
Creating Searchable File Libraries or Query Results	
by Using Verity Indexing.	719
Three forms of indexing	719
Creating a Verity Index (collection).	721
The CFCOLLECTION tag	721
Populating (indexing) a Verity collection	721
Searching a Verity collection	723
Summary	727

Chapter 33: Charting Data with ColdFusion MX 729

Creating a Chart	729
Types of Chart Series	732
Scatter	733
Line	733

Curve	734
Step	734
Area	735
Bar	735
Cylinder	736
Cone	736
Pyramid	737
Pie	737
Creating a Chart from the Database	738
The stocks database	738
Creating the chart	738
Summary	740

Chapter 34: Leveraging Nifty Custom Tags 741

Where to Find Custom Tags	741
CF_MsMenu	742
CF_DHTMLMenu	742
CF_TwoSelectsRelated	743
Where to Find User-Defined Functions	745
CFMLLib	745
DataManipulationLib	746
DateLib	747
StrLib	748
MathLib	748
Where to Find ColdFusion Components	749
Summary	749

Chapter 35: Tools to Enhance the Development Environment 751

Integrated Development Environments	751
ColdFusion Studio/HomeSite+	752
TopStyle	752
Dreamweaver MX	753
Database-Design Tools	755
Embarcadero ER/Studio 5.5	755
AllFusion ERwin Data Modeler	756
Load-Testing Tools	757
Empirix e-TEST Suite 6.5	757
Quest DataFactory 5.2	758
Code Generators	759
CommerceBlocks	759
CodeCharge	760
CodeCharge Studio	761
WYSIWYG HTML Editors	761
soEditor	761
eWebEditPro	762
ActivEdit	763

Outlining and Mind-Mapping Tools	764
Microsoft Word's outline	764
MindMapper	764
Visual Mind	765
Summary	765

Part VII: ColdFusion MX Development Practices 767

Chapter 36: Documenting Your Code 769

The True Goals of Documentation.	769
External Documentation	771
Internal Documentation.	774
CFML comments	775
HTML comments	775
SQL comments	775
JavaScript comments.	776
XML considerations	776
Documenting changes	776
Summary	777

Chapter 37: Fusebox Basics. 779

A Brief Fusebox Glossary.	779
What is Fusebox?	781
A brief history of Fusebox	781
An architectural framework of a methodology?.	782
Exploring the Fusebox architectural framework	782
Do we need Fusebox?	784
The case for agreement on an architectural framework	784
The case for Fusebox.	786
Fusebox Components	787
Fusebox terms.	787
The Fusebox core files	790
Creating a Hello World Fusebox Application.	792
Marking up the prototype	792
Identifying exit points, fuseactions, and circuits	794
Identifying fuses.	795
Mapping circuits to directories	796
Setting a default fuseaction	797
Mapping fuses to fuseactions	797
Setting the default page to include the Fusebox core file	799
Writing the fuses	799
Trying out HelloWorld	800
Summary	801

Chapter 38: Advanced Fusebox 803

Exit Fuseactions (XFAs)	803
Documenting Fuses	806
Nested Circuits.	810
Recursively Calling the Fusebox.	815
Nested Layouts	815
12 Steps to a Fusebox Program	822
Begin with a prototype.	823
Mark up the prototype.	823
Identify all fuseactions	824
Separate fuseactions into circuits	824
Define the meaning of each fuseaction.	824
Define layout files.	825
Write layout files	825
Determine the contents of the FBX_Settings.cfm files	825
Write Fusedocs	825
Write fuses	826
Test your fuses	826
Integrate and test	826
Adalon	827
Sample Code: A Small Fusebox Application	827
Summary	844

Chapter 39: Handling Source-Code Version Control 845

What Is Source-Code Control?	845
Source-Code Control Concepts	846
The repository and working directory	846
Setting up source-code control	847
Adding files to the repository	847
What files should be placed in the repository	848
Checking in and out.	848
Viewing a file's version history	849
Other source-control operations	851
Summary	851

Chapter 40: Integrating Security. 853

Authenticating Users: Login Processing	853
CFLOGIN in action	854
The CFLOGINUSER tag in action	855
Logout Processing.	856
Logout time specified by CFLOGIN idletimeout setting	856
Logout using CFLOGOUT	858
Logout by browser close.	859

Prompting for Username and Password	860
Prompting by using a simple form	861
Using special form variables: j_username and j_password	862
Using programmatic basic authentication	863
Using declarative basic authentication	864
Validating Username and Password	866
Authenticating against a database	867
Authenticating against an OS/LDAP repository	867
Proceeding based on success or failure of authentication	868
Authorizing Users: Permissions Control	869
The value of roles	869
Where to store and how to track a user's role(s)	869
Testing for authorization: IsUserInRole()	870
Use of roles in CFFUNCTION	871
Some cautions about using roles in CFMX	871
Summary	872

Chapter 41: ColdFusion Studio and HomeSite+ Tips and Tricks . . . 873

Updating ColdFusion Studio for MX	873
Tricks for Faster Coding	873
F5 yellow comments	874
Customized tag editors	874
Default template	877
Snippets	877
Snippet shortcuts	879
Tab/Shift+Tab indenting	879
Table Wizard	880
Code templates	881
Keyboard shortcuts	883
Custom toolbars	883
Outlining the current line of code	885
Tag completion customization	885
Development mappings	885
Split document window	886
Bookmarks	886
Thumbnails	887
Tricks for Easier Coding	887
Query Builder	887
Style Editor	888
Color coding	889
Image Map Builder	890
Right-clicking a code selection	891
Tips for Better Coding	892
Tag editors	892
Tag Insight	892
Expression Builder	893
Function Insight	894
Summary	895

Chapter 42: Testing and Performance 897

Web-Application Testing	898
HTML-oriented testing	898
CFML-code testing	915
Application-integration testing	917
Performance Measurement.	919
ColdFusion performance measurement	920
Performance Tuning.	926
CF-coding tuning opportunities	927
Database selection/design/indexing	928
Database-coding tuning opportunities	928
Datasource configuration	931
CF Administrator settings	931
Resources For Learning More	933
ColdFusion tuning resources	933
Web-application testing resources	933
Performance-tuning resources	934
Database-tuning resources	935
Summary	936

Part VIII: ColdFusion MX Administration 937**Chapter 43: An Overview of ColdFusion MX Administrator. 939**

Server Settings	939
Settings.	939
Caching.	941
Client Variables	942
Memory Variables.	943
Mappings.	944
Mail Server.	945
Charting	946
Java and JVM	946
Archives and Deployment	947
Settings Summary.	948
Data & Services	949
Data Sources.	949
Verity Collections	953
Verity K2 Server.	954
Web Services	955
Debugging & Logging	955
Debugging Settings	955
Debugging IP Addresses	958
Logging Settings.	958
Log Files	959
Scheduled Tasks	960

System Probes	961
Code Analyzer	962
Extensions	963
Java Applets	963
CFX Tags	965
Custom Tag Paths	966
CORBA Connectors	967
Security	968
Summary	968

Chapter 44: Configuration Tips and Tricks 969

Choosing the Number of Simultaneous Request Threads	969
Caching	970
Chart caching	971
Query caching	971
Using a UUID For CFToken	971
Using J2EE Session Variables	972
Datasources	972
Java and JVM Settings	973
Sandbox and Resource Security	974
Data Sources	974
CF Tags	975
CF Functions	975
Files and Directories	976
Servers and Ports	977
Summary	978

Part IX: ColdFusion MX Language Reference 979

Chapter 45: Introduction to the Language Reference 981

How This Language Reference is Organized	981
How to read the listings	982
Alphabetical Listing of Tags	982
Alphabetical Listing of Functions	984

Chapter 46: Designing Your Application Framework. 989

Chapter 47: General Use Tags and Functions 991

General	991
System	993

Chapter 48: Working with Variables 997

General	997
Strings	1002
Numbers	1008

Dates and Times	1012
Lists	1020
Arrays	1024
Structures	1027
Query Objects	1031
ASCII	1031
Basic Math	1031
Binary Data	1033
Geometry and Trigonometry	1035
Chapter 49: Flow Control	1037
CFML	1037
ColdFusion Scripting	1041
Chapter 50: Exception Handling	1047
ColdFusion Scripting	1049
Chapter 51: Forms	1051
Chapter 52: Databases and Queries	1061
Chapter 53: Custom Tags	1071
Chapter 54: ColdFusion Scripting	1073
Chapter 55: Working with Systems Outside ColdFusion	1075
XML	1075
WDDX	1077
Web Servers	1078
Java, COM, and CORBA	1081
Operating System	1084
Chapter 56: Controlling Server Output and Whitespace	1087
Server Output	1087
White Space	1088
Chapter 57: Verity	1091
Chapter 58: Mail	1095
Chapter 59: Charting, Reporting, and Logging	1099
Charting	1099
Reporting	1102
Logging	1102

Chapter 60:Files and Directories	1105
On ColdFusion Server	1105
On the Client (User's) Computer	1111
On an FTP Server.	1111
Chapter 61: The Registry.	1121
Chapter 62: Security	1123
Authentication and Authorization	1123
Encryption	1125
Chapter 63: Functions, Components, & Web Services	1127
Appendix: What's on the CD-ROM.	1135
Index.	1139
