

Contents

Introduction	xxiii
Chapter 1: Challenges of the Virtual Environment	1
Introduction	2
What Defines a Mainframe?	2
Benefits of the Mainframe Model	3
History and Benefits of Distributed Computing	5
The Workstation	5
Enter Distributed Computing	6
Two-Tiered Computing	6
Three-Tiered Computing	6
Distributed Computing and the Internet	8
Benefits of Distributed Computing	9
Meeting the Business Requirements of Both Models	9
The Main Differences Between Remote Control and Remote Node	11
Remote Control	11
Benefits of Remote Control	12
Downsides to Remote Control	12
Remote Node	14
Why Use Remote Access?	15
Drawbacks of Remote Node Computing	16
So How Do You Choose?	16
The Thin-Client Revolution	17
Key Concepts	18
The Beginning of Terminal Services and MetaFrame	19
Introduction of Terminal Services	20
Windows 2000 Terminal Services	21
What Exactly Is Terminal Services?	21
Install Mode	23
System Requirements for Terminal Services	23
Types of Terminal Services Installations	24

Terminal Services Licensing	25
Terminal Services Tools	27
The Virtual Memory	30
Remote Desktop Protocol (RDP)	31
The Terminal Services Client	33
Local Drive Mapping	36
Network Load Balancing for Windows 2000	36
Citrix MetaFrame	37
The ICA Protocol	37
Application Publishing	41
The ICA Client	41
The MetaFrame Server	46
MetaFrame Server Tools	49
Citrix and the Internet	52
Choosing Terminal Services or MetaFrame	53
Bottom Line Value of Using Thin-Client Technology	54
Calculating Hard Costs	54
Calculating Soft Costs	55
Summary	57
FAQs	58

Chapter 2: Routing and Remote Access Services for Windows 2000 61

Introduction	62
Designing and Placing RAS Servers on the Network	62
Sizing the Servers	62
RAM	63
Processors	64
Storage	64
Network Interfaces	68
Clusters	68
Modems	69
Placing the RAS Servers on the Internetwork	72
Remote Access Protocols	74
Dial-up Clients	75
PPP and SLIP	75
CHAP and PAP	75
VPN Clients	76
PPTP	78
L2TP	80
IPSec	81
Installing the Windows 2000 Remote Access Service	82

Dial-Up Configuration	82
Configuring Your RAS Server in Windows 2000	82
VPN Configuration	96
PPTP	99
IPSec	99
L2TP	100
RAS Upgrade Considerations	101
Upgrading from Windows NT 4.0 RAS	102
Upgrading from Windows NT 3.5x RAS	102
Migrating from a Third-Party Remote Access Service	103
Summary	103
FAQs	104

Chapter 3: Designing Terminal Services for Windows 2000 **105**

Introduction	106
Designing and Placing Terminal Services on the Network	106
Sizing the Server—User and Application Analysis	107
Network Interfaces	110
Clusters	114
Modems	115
Impact from the Number of Users	115
Placing Terminal Services Servers on the Network	116
Implementing Terminal Services Protocols	121
RDP	121
Upgrading from RDP 4.0 to RDP 5.0	122
TCP/IP	123
Other Protocols	125
Analyzing the Environment	125
Network Requirements for New Installations	127
LAN	128
WAN	130
Internet Connectivity	130
Upgrade from Windows NT 4.0	
Terminal Services Considerations	130
WinFrame, Any Version	132
Windows NT 4.0 Terminal Server Edition	132
MetaFrame 1.0 or 1.8	132
Windows NT 4.0	134
Integration with Citrix MetaFrame or WinFrame	134
Summary	134
FAQs	135

Chapter 4: Designing a Citrix MetaFrame Internetwork	139
Introduction	140
Designing and Placing MetaFrame Servers on the Network	140
Sizing the Server	141
RAM	143
Processors	145
Storage	148
Network Interfaces	153
Modems	153
Placing the Server on the Network	156
Designing an Internetwork with Multiple MetaFrame Servers	157
Placing Servers on the Network	158
Implementing Load Balancing Procedures	159
Utilizing License Pooling	161
Implementing MetaFrame-Supported Protocols	161
TCP/IP	162
IPX/SPX	162
NetBEUI	163
ICA	163
Analyzing the Environment	164
Designing the Internetwork	168
LAN	168
WAN	170
Internet	172
Upgrading to Citrix MetaFrame 1.8 for Windows	174
Summary	176
FAQs	176
Chapter 5: Deploying Terminal Services Clients	179
Introduction	180
Limitations of Terminal Services Clients	180
Licensing	180
Licensing a Terminal Services Client	183
Operating System Limitations	184
Protocol Limitations	184
Other Limitations	184
Client Considerations	185
Installing the Client Manually	186
32-bit Windows	186
16-bit Windows	189
Windows CE	191
Deploying the Client Using Automated Installation Methods	192

32-bit Windows	192
Sample Automated Installation	193
Using the Client Software	193
Terminal Services Client	193
Client Connection Manager	195
Summary	201
FAQs	202

Chapter 6: Citrix MetaFrame Clients 205

Introduction	206
Selecting a Protocol	206
Installing MetaFrame Clients	212
DOS	212
Creating DOS ICA Client Installation Floppy Disks	214
Windows 16-Bit	215
Windows 32-Bit	215
Creating Windows 32-Bit Client Installation Floppy Disks	216
Macintosh	218
OS/2	220
OS/2 Installation	220
Win-16 OS/2 Installation Procedure	221
DOS OS/2 Client Installation Procedure	222
UNIX	222
Steps to Perform a Text-Based UNIX (Linux) Client Installation	224
Using the Red Hat Package Manager (RPM) to Install the Client	225
Deploying MetaFrame Clients Using Automated Installation	228
Steps to Create Preconfigured Client Install Disks	229
Creating a New Client Update Database	229
Configuring MetaFrame Clients	230
Configuring the UNIX Clients	232
Connection Tab	235
Window Tab	237
Application Tab	237
Preferences Tab	238
Server Location Tab	239
HotKeys Tab	239
Disk Cache Tab	240
Drive Mapping	241
Win32 Client Configuration Overview	242
Configuring the Win32 Clients	244

ICA Settings	250
ICA Client Mappings	251
Mapping Win32 Client Audio	252
Troubleshooting Basic Client Connectivity.	252
Summary	254
FAQs	256

Chapter 7: Installing Terminal Services 259

Introduction	260
Gathering Business Goals and Objectives	260
Components of Windows 2000 Terminal Services	262
Windows 2000 Multiuser Kernel	263
Remote Desktop Protocol (RDP)	263
Terminal Services Client	264
Terminal Services Administration Tool	264
Terminal Services Encryption	264
Remote Administration Mode	265
Application Server Mode	268
Testing Configurations and Deploying a Pilot	271
Installation	271
Rolling Out the Final Configuration	277
Local Printer Support	277
Roaming Disconnect	277
Enhanced Performance	278
Multiple Login Support	278
Clipboard Redirection	278
Securing ClipBook Pages	279
Windows 2000 Server	280
Windows 2000 Advanced Server	280
Terminal Services Licensing	281
Installing the Terminal Services Licensing Component	282
Activating the Terminal Services License Server	282
Using the Training Tools	283
Administrators	284
Terminal Services Manager	284
Terminal Services Configuration	284
Terminal Services Client Creator	285
Terminal Services Licensing	285
End Users	285
Summary	286
Using Terminal Services to Provide Applications over the Internet	287
FAQs	287

Chapter 8: Installing Citrix MetaFrame	289
Introduction	290
Business Drivers for Selection of Citrix MetaFrame	290
Installing MetaFrame 1.8	294
Integrating with the Active Directory	300
Mixed Mode	300
Native Mode	301
Installing NFuse	303
Feature Release 1	308
NFuse 1.5	308
RC5 Encryption	309
SSL Relay	309
TCP-Based Browsing	309
Web Install	309
SpeedScreen Latency Reduction	309
Testing Configurations and Deploying a MetaFrame Pilot	310
Application Launching and Embedding	312
Rolling Out MetaFrame to the Environment	312
Presenting Applications to Users	313
Defining the Environment	313
Installing the ICA Client	313
Citrix MetaFrame Licensing	314
Training	315
Administrators	315
End Users	315
Summary	316
FAQs	316
Chapter 9: Configuring the User Experience	319
Introduction	320
Configuring Parameters with Active Directory Utilities	320
Creating a Custom MMC Console	323
Configuring the User Properties	324
Using Citrix MetaFrame Utilities	334
Shadowing	334
Establishing a Shadow Session	
Using the Shadow Taskbar	335
Establishing a Shadow Session Using	
Citrix Server Administration	337
Applying Group Policy	339
Understanding Group Policy and Active Directory	341
Creating a Custom MMC Console for Group Policy	343

Connection Profiles and Session Configuration	350
Specifying Shadow Permissions to a Connection Profile	354
Summary	357
FAQs	359
Chapter 10: Configuring Terminal Sessions	361
Introduction	362
Creating Sessions	362
Configuring Sessions	367
Applying Security Across All Sessions	374
Encryption	374
Logon Settings	376
Session Permissions	377
Special Internet Security Measures	378
Summary	379
FAQs	380
Chapter 11: Installing and Publishing Applications	383
Introduction	384
Selecting Compatible Applications	384
Installing Applications on the Server	386
User-Specific	386
User-Global	387
Testing the Applications	391
Shadow Registry	395
Application Compatibility Scripts	397
Publishing Applications	405
Using Published Application Manager	405
Multisession Applications	407
“Short and Drop”	407
Load Balancing	407
Creating an ICA File	409
Netscape	422
Internet Explorer	422
Summary	422
FAQs	423
Chapter 12: Utilizing the Internet	425
Introduction	426
Phoenix Manufacturing Case Study	426
Providing Business Applications over the Internet	428
The Total Cost of Ownership Advantage	428
Business-to-Business Arrangements	430
Overview of Connecting to Sessions over the Internet	431

Using MetaFrame Client and VPN	431
Server Farms	433
Using a Web Browser	433
Configuring the Server to Provide Applications from a Web Page	437
Configuring the Original Installation	438
Determining How the Application Is Displayed	440
NFuse	442
Configuring the NFuse Components	443
Installing the NFuse Services on the Citrix Server Farm	444
Installing the NFuse Web Server Extensions	446
Using the Web Site Wizard to Set Up an Initial Site	448
Web Access Screen Examples	452
Infrastructure Impacts	454
Firewall Setup Considerations	454
Summary	456
FAQs	457

Chapter 13: Optimizing, Monitoring, and Troubleshooting Windows 2000 and Terminal Services 459

Introduction	460
Optimizing Your Resources	460
Handling Changes in the Environment	460
Tape Backup	462
Imaging	463
Increased Users	463
New Applications	466
Internet Configuration Changes	466
Performance Tuning	468
Monitoring	469
Session Utilities	470
Shadowing Sessions	474
Troubleshooting	478
Establishing Drive Mapping	478
Resolving Connectivity Issues	479
Preventing Users from Downloading Files	482
Printing	484
How Printing Works	485
Resolving Printing Problems	485
Summary	486
FAQs	488

Chapter 14: Managing Citrix MetaFrame 1.8 for Windows 2000 Fast Track	491
Introduction	492
Understanding Mid-Tier Architecture	492
Remote Node and Remote Control	494
Connecting Client Types	495
Remote Desktop Protocol (RDP)	495
Supported Operating Systems	496
Supported Protocols	496
The Independent Computing Architecture	497
Supported Operating Systems	497
Supported Protocols	498
Licensing	499
Application Load Balancing	499
Designing and Deploying Terminal Services MetaFrame	500
Design	500
Deploying MetaFrame	502
Configuration	503
Utilizing the Internet	504
Managing Your Systems	505
The Value of a Thin-Client System	506
The Future of Windows and MetaFrame	507
Microsoft Windows 2000	507
Citrix MetaFrame	508
FAQs	508
Appendix A: Secrets	511
Appsrv.INI Parameters	512
Improving Terminal Services Performance	519
Index	521
