<b>Chapter 1 Cisco Technologies, Routers, and Switches</b>	<b>1</b>
Introduction	2
The OSI Model	2
Layer 1: The Physical Layer	3
Layer 2: The Data-Link Layer	3
Layer 2: Media Access Layer and Logical Link Control.	3
Layer 3: The Network Layer	4
Layer 4: The Transport Layer	5
Layer 5: The Session Layer	5
Layer 6: The Presentation Layer	6
Layer 7: The Application Layer	6
The TCP/IP Model, the DoD Model, or the Internet Model	6
Process/Application Layer (Application, Presentation, and Session)	6
Host-to-Host Layer (Transport)	8
TCP	8
UDP	10
The Internet Layer	11
The Network Layer	14
Networking Basics	14
Network Topologies	15
Bus Topology	15
Star Topology	16
Ring Topology	17
Mesh Topology	17
CSMA/CD versus Deterministic Access	17
Ethernet	18
Wireless LANs	22
OSI and Wireless: Layer 2 and Down	22
OSI and Wireless: Layer 3 and Up	25
Cisco Hardware	26

Switches	26
Spanning Tree Protocol	27
Spanning Tree Port States	28
Cisco Catalyst Series Models	29
Switch Architecture	31
Supervisor Engine	31
Switch Fabric	34
Backplane	34
Memory	35
Flash	36
Non-Volatile Random Access Memory (NVRAM)	36
Modules	36
Application Specific Integrated Circuits (ASIC)	37
Switch Commands	37
Routers	37
Router Architecture	37
Backplane	37
Memory	38
Cards	38
Cisco Models	39
Accessing and Using Routers and Switches	45
Access Cisco Console and AUX Port Cabling	46
Connecting to the Router	46
Console Port Connections	47
Telnet Connection	49
SSH	49
Cisco Software	51
Cisco Software - IOS	51
Software Image Lifecycle	53
Early Deployment (ED)	54
First Customer Ship (FCS)	55
LD	55
GD	55
End Cycles	55
IOS Command Syntax and Basic Configuration	56
SNMP Configurations	56
Web	57
Config Maker	58
Entering Commands to Configure a Cisco Router	58
Using Configuration Commands	60
Using Passwords to Control Router Access	62

Performing Interface Configuration Tasks	64
Using show Commands	66
Using the show version Command	69
Using the show running-configuration Command	70
Using the show Interface Command	72
Increasing Efficiency by Using Shortcuts	73
The autocommand Feature	74
Menus	75
CATOS Command Syntax and Basic Configuration	76
Configuring Network Parameters	77
Securing the Switch	78
Creating VLANs	78
Port Configuration	79
Enabling Trunking	80
Networking Monitoring and Packet Capture	81
You are Not Alone—Resources for Cisco Hardware and Software	82
Cisco Technical Support—General	82
CCO	83
TAC	84
NPC	85
Software Advisor	85
Software Center	86
Groupstudy.com	87
Summary	88
<b>Chapter 2 Wide Area Networking (WAN)</b>	<b>91</b>
Introduction	92
Wide Area Network Topologies	92
Point-to-Point Topology	93
Fully Meshed Topology	93
Hub-and-Spoke Topology	93
High-Level Data Link Control	94
Point to Point Protocol	95
PPP Features	96
Bonding of Communications Links	97
Link Control Protocol	97
Network Control Protocol	99
PPP Alternatives...Not Really: PPP vs. SLIP and ARAP	100
Configuring PPP	100
Autoselect	101
PPP Addressing Methods	102

PPP Authentication	103
Password Authentication Protocol (PAP)	103
Challenge Handshake Authentication Protocol	104
What's in a Name? Usernames and Passwords	105
Authentication Failures	106
PPP Callback	106
PPP Compression	108
Multilink PPP	108
Multichassis MP (MMP)	109
Verifying and Troubleshooting PPP	111
Circuit Types and Terminology	114
T1 and Fractional T1	115
Frame Relay	116
Committed Information Rate (CIR)	118
Local Management Interface (LMI)	118
Frame Relay Topologies	119
Subinterfaces	121
Configuring Frame Relay	122
Verifying and Troubleshooting Frame Relay	124
Physical Layer Troubleshooting	124
Loopback Tests	126
Frame Relay Problems	127
Asynchronous Transfer Mode (ATM)	129
ATM Cell Format	130
ATM Adaptation Layer (AAL)	130
ATM Virtual Circuits	131
PVC Mapping and Circuit Buildup	131
Configuring ATM	132
Verifying and Troubleshooting ATM	133
ATM Debug Commands	135
Integrated Services Digital Network	139
Basic Rate Interface (BRI)	140
BRI Call Setup	140
BRI Reference Points and Functional Groups	141
Primary Rate Interface (PRI)	142
PRI Reference Points and Functional Groups	142
ISDN Protocol Layers	142
U-plane	143
C-plane	143
ISDN Call Setup and Teardown	143

Dial-on-Demand Routing (DDR)	145
Dialer Interfaces	146
Supported Interfaces	147
ISDN Interfaces	147
Synchronous Serial Interfaces	148
Asynchronous Modem Connections	148
Configuring ISDN and DDR	148
ISDN and DDR commands	161
ISDN Troubleshooting	163
ISDN Connections between Cisco Routers	163
Monitoring the ISDN Interface	168
Monitoring the Dialer	171
Backing up Permanent Connections	172
Backup Interface	172
The backup load Command	175
Floating Static Routes and Default Routes	176
Dialer Watch	181
Configuring a Dialer Profile	182
Verifying and Troubleshooting Backup Connections	182
Routing Issues	185
Redundant Hardware and Links/ Design and Performance Issues	185
Load Balancing	186
Per-Destination Load Balancing	186
Summary	188
<b>Chapter 3 Wireless Networking</b>	<b>189</b>
Introduction	190
Understanding the Fundamentals of Radio Frequencies	190
Understanding Wireless Radio Signal Transmission and Reception	191
Radio Frequencies	193
Radio Country Options	195
What is Bandwidth?	196
WLAN Frequency Bands	196
Radio Wave Modulation	198
Digital Signal Modulation: Phase Modulation	198
BSPK	199
QPSK	199
Complementary Code Keying	200
Communicating with WLAN Technologies	201
Microwave Technology	202

Infrared Technology	202
Spread Spectrum Technology	203
Frequency Hopping Spread Spectrum (FHSS)	204
Direct Sequence Spread Spectrum (DSSS)	204
DSSS Channel Setup	205
Wireless Networking Standards	206
IEEE	208
802.11	208
802.11b	214
802.11a	215
802.11g	215
Wireless Design Considerations	216
Attenuation	216
Multipath Distortion	216
Refraction	218
Accounting for the Fresnel Zone and Earth Bulge	219
RF Interference	220
Interference from Radio Transmitters	221
Harmonics	221
Application Considerations	222
Structural Considerations	222
Implementing a WLAN Architecture	223
The OSI Reference Model	224
Logical Wireless System Components	225
Physical Wireless System Components	225
Security Fundamentals for Wireless Networks	226
Ensuring Confidentiality	227
Ensuring Integrity	227
Ensuring Availability	228
Ensuring Authentication	228
Extensible Authentication Protocol (EAP)	229
Per-packet Authentication	230
Cisco LEAP	230
Configuration and Deployment of LEAP	232
An Introduction to the 802.1x Standard	233
Ensuring Authorization	235
Where in the Authentication/Association	
Process Does MAC Filtering Occur?	236
Accounting and Audit Trails	237
Wireless Equivalency Privacy (WEP)	237

Addressing the Issues with Policy	238
Creating Privacy with WEP	238
WEP Benefits and Advantages	239
WEP Disadvantages	239
The WEP Authentication Process	239
Implementing WEP on the Cisco Aironet AP 340	239
Security of 64-Bit versus 128-Bit Keys	240
Cisco Wireless Systems	241
Cisco's WLAN Product Line	241
Cisco's Aironet 3X0 Series APs and Bridges	243
The Cisco Aironet 350 Series	244
Aironet 350 AP	245
Aironet 350 Wireless Bridge	246
Aironet 350 Workgroup Bridge	247
Features of the Cisco Aironet 340 Series - End-of-Sale	249
The Cisco Aironet 340 Series AP	249
The Cisco Aironet 340 Series Wireless Bridge	250
The Cisco Aironet 340 Series Workgroup Bridge	251
The Cisco Aironet 340 Series Base Station	252
Cisco's Aironet Wireless NICs	253
Installing the Cisco Aironet 3X0 APs	254
Power Requirements	255
Network Connectivity	256
Initial Configuration of the Cisco 3X0 Series AP	256
IP Setup Utility	257
Terminal Emulator Setup	257
Web-Based Configuration of the Cisco 340 BSE/BSM Series AP	259
Troubleshooting the Cisco 340 BSE/BSM Series AP	261
Cisco Aironet Wireless Bridges	262
Cisco Aironet Wireless Bridge - Point-to-Point	262
Cisco Aironet Wireless Bridge - Point-to-Multipoint	263
Cisco Wireless Bridge - Repeater	264
Installation of the Cisco Aironet Bridge Unit	264
Installing the Antenna	265
Configuring the Network Port	266
Applying Power	266
Working with Root and Non-Root Modes on a Wireless Bridge	266
Initial Configuration of Wireless Bridge Using the CLI	267

Assigning the Radio Parameters	269
Setting the Root Parameters	269
Setting the SSID	270
Setting the Data Rate	270
Setting the Distance	270
Assigning IP Information	270
Establishing Communications Using Remote	
Telnet Access	270
Establishing Communications Using Remote Web	
Browser Access	271
Operational Configuration of the Cisco Aironet Wireless Bridge	271
Using the Cisco Aironet Wireless Bridge Radio Main Menu	272
Configuring the Basic Rates Option	272
Configuring the Frequency Option	272
Configuring the IEEE 802.11 Options	272
Configuring the Extended Options	275
Configuring the Ethernet Port	277
Configuring the Network Identifiers	277
Console Management Access	278
Configuring Passwords	278
Configuring Privileges	279
Configuring the Time Service	279
Setting Up Association Tables	280
Using Filters	280
Configuring the Multicast Option	281
Configuring the Node Option	281
Configuring the Protocols Option	282
Event Logging	282
Viewing Statistics	283
Cisco Aironet Wireless Bridge Troubleshooting	285
Network Menu Option	286
Connect Option	286
Find Option	286
Ping Option	287
Linktest Menu Options	287
Restart Option	288
Default and Reset Options	288
Loading Firmware and Configurations	288
FTP	289
Distribute	289

BOOTP and DHCP	290
Backing Up Wireless Bridge Configurations	290
Cisco Aironet Antennas	290
Ceiling Mount Omni-Directional Antenna	292
Mast Mount Omni-Directional Antenna	292
High-Gain Mast Mount Omni-Directional Antenna	292
Pillar Mount Diversity Omni-Directional Antenna	293
POS Diversity Dipole Omni-Directional Antenna	293
Diversity Ceiling Mount Omni-Directional Patch Antenna	293
Directional Wall Mount Patch Antenna	293
Diversity Directional Wall Mount Patch Antenna	293
Yagi Antenna	293
Dish Antenna	294
Antenna Accessories	295
Yagi Articulating Mount	295
Magnetic Mount	296
Lightning Arrestor with Grounding Ring	297
Bridge and AP Accessories	297
Bridge Mounting Kit	298
AP/Bridge Spare Power Supplies	298
AP/Bridge Serial Cable	299
NEMA Enclosures	299
Cabling, Connectors, and Bulkhead Extenders	301
Cabling	301
Connectors	301
RP-TNC Connectors	301
Bulkhead Extenders	302
Summary	303
<b>Chapter 4 IP Addressing, Multicasting, and IPv6</b>	<b>305</b>
Introduction	306
IPv4 Address and Header Format	306
Classful Addressing - Structure and Size of Each Type	308
IP Address Classes	308
Class A	309
Class B	309
Class C	309
Class D	309
Class E	310
Strategies to Conserve Addresses	310
CIDR	310

VLSM	310
Private Addresses	310
Public versus Private Address Spaces	311
RFC 1918 - Private Network Addresses	311
The Three Address Blocks	311
Considerations	312
The Fundamentals of Subnetting	312
What the Mask Does	312
Subnet Mask Components	313
Binary Determination of Mask Values	313
Decimal Equivalent Mask Values	313
Addresses and Mask Interaction	315
Reserved and Restricted Addresses	317
Determining the Range of Addresses within Subnets	317
Determining Subnet Addresses Given a Single Address and Mask	319
Strategies for Subnetting	319
Creating and Managing Variable Length Subnets	319
Determine Addressing Requirements	320
Review Your Internetwork Design	320
How Many Subnets do You Need?	321
Document Your Addresses	326
Multicast Addresses and Protocols	326
Understanding the Basics of Multicasting	327
Unicast Traffic	328
Broadcast Traffic	328
Multicast Traffic	329
Multicast IP Addressing	330
IP Address Designations	330
Scope of Multicast Addresses Using the Time-to-Live Field	332
TTL Thresholds	332
Administrative Scopes	332
Mapping Multicast IP Addresses to MAC Addresses	333
Participating in Multicasting	336
Internet Group Management Protocol Versions	336
IGMPv1	337
IGMP version 2	339
IGMP version 3	341
Multicasting via Switches	344
CGMP	344

IGMP Snooping	344
Distribution Trees	346
Shared	346
Source	346
Multicast Routing	347
Sparse Mode Routing Protocols	347
Dense Mode Routing Protocols	348
DVMRP	348
PIM Dense Mode (PIM-DM)	349
MOSPF	350
NAT	350
NAT Terminology and Concepts	351
NAT Operation	352
Configuring NAT on Cisco IOS	354
Configuration Commands	354
NAT Architectures	358
Traditional NAT or Outbound NAT	358
Dynamic Translation	360
Dynamic NAT Translation Commands	362
Static NAT	364
Static Translation Process	365
Configuring Static NAT Translations	366
Dual Address Translation (Overlapping Networks)	368
Port Address Translation	371
Configuring PAT	374
TCP Load Distribution	374
Configuring TCP Load Distribution	376
Verifying TCP Load Distribution	377
NAT Monitoring and Troubleshooting Commands	379
Considerations about NAT and PAT	381
IP Address Information in Data	381
Bundled Session Applications	381
Peer-to-Peer Applications	381
IP Fragmentation with PAT en Route	381
IPSec and IKE	382
IPv6	382
Benefits of IPv6	382
IPv4 versus IPv6	383
Header Comparison	383
Feature Comparison	384

IPv6 Addresses	385
IPv6 Address Space	386
The Fundamentals of IPv6 Addresses	387
IPv4 Addresses as IPv6 Addresses	389
IPv6 Unicast Addresses	390
Aggregatable Global Unicast Address	391
Subnetting and Prefixes for IPv6 Aggregation	397
IPv6 Multicast Addressing	400
IPv6 Anycast Addresses	403
IPv6 Address Autoconfiguration	405
IPv6 Headers	406
The IPv6 Extension Headers	407
Hop-by-Hop Options Header	410
Routing Header	412
Fragment Header	414
Destination Options Header	415
IPv6 Security	416
AH	416
ESP	419
Upper-Layer Protocol Issues	420
Understanding ICMPv6	422
Error Messages	422
Informational Messages	423
Understanding Neighbor Discovery	424
Router Solicitation and Advertisement	424
Neighbor Solicitation and Advertisement	425
Redirect Message	429
Message Options	429
Configuring IPv6 Addressing	429
Configuring LAN Addresses	430
Configuring Duplicate Address Detection	432
Configuring DNS	433
Configuring WAN Addresses	433
Configuring ATM	433
Configuring Frame-Relay	433
Configuring ICMPv6 and Neighbor Discovery	436
Monitoring and Troubleshooting IPv6	436
Using Basic show Commands	436
Using the show bgp Commands	442

Verifying WAN Addressing	445
Verifying ICMPv6 and Neighbor Discovery	
Configuration	446
Using debug Commands	447
Summary	451
<b>Chapter 5 IP Routing</b>	<b>453</b>
Introduction	454
Routing Terminology	454
CIDR	459
Contiguous Subnets	461
Cisco Routing in General	462
Static Routes	462
Default Routes and Networks	463
Many Are Learned, Few Are Chosen	464
Routing Information Protocol (RIP)	464
Routing Update Impact	465
RIP Timers	465
RIPv1	466
RIPv2	467
Configuring RIP	469
IGRP	472
Configuring IGRP	473
RIP versus IGRP	475
EIGRP	476
EIGRP Concepts	477
Configuring EIGRP	477
OSPF	481
Becoming Neighbors	481
Achieving Adjacency	482
Types of OSPF Packets	483
Hello Packets	483
Link State Advertisements	485
The Function of Link State Advertisements	486
Common LSA Header	486
LSA Type 1 Router LSA	487
LSA Type 2 Network LSA	489
LSA Type 3 Summary LSA (Network) and LSA Type 4	
Summary LSA (ASBR)	489
LSA Type 5 External LSA	490
Types of OSPF Areas	491

The Backbone Area, a.k.a. Area 0	492
Configuring a “Normal” Area	493
Stub Areas	494
Totally Stubby Areas	495
Not So Stubby Areas	496
Not So Stubby Totally Stubby Areas	497
Multiple OSPF Areas	498
Types of OSPF Routers	499
Designated Routers	500
OSPF Router ID and Loopback Interfaces	502
Types of OSPF Databases	503
What Is the Topology Database?	503
Processing of Received Updates	505
OSPF Cost	505
Multiple Paths of Equal Cost	506
Cost Calculation with Gigabit Ethernet and Faster Interfaces	506
Types of Recognized Networks	506
Point to Point	507
Point to Multipoint	508
Broadcast	509
Non-Broadcast Multi-Access (NBMA)	510
Physical Interfaces, Point-to-Point Subinterfaces, and Point-to-Multipoint Subinterfaces	512
Basic OSPF Configuration	513
OSPF over Frame Relay Point to Point (Subinterfaces)	514
OSPF over Frame Relay (NBMA and Physical Interfaces)	516
OSPF over Frame Relay Point-to-Multipoint Subinterfaces	518
OSPF over Frame Relay Point-to-Multipoint Subinterfaces	520
OSPF on Broadcast Networks	522
OSPF Summarization	525
Why Summarize?	525
The summary-address Command	525
The area range Command	527
Authentication	528
Plaintext versus Message Digest 5	528
Area Authentication	529
OSPF Virtual Links	531
Monitoring and Troubleshooting OSPF	532
The show ip ospf database Command	532

The show ip ospf database router (LSA 1) Command	533
show ip ospf database network (LSA TYPE 2)	533
The show ip ospf database summary (LSA 3) Command	534
The show ip ospf database asbr-summary (LSA 4) Command	535
The show ip ospf database external Command	536
The show ip ospf database nssa-external (LSA 7) Command	537
show ip ospf neighbor	537
The show ip ospf interface Command	538
The show ip ospf Command	538
The show ip ospf borders-routers Command	539
The show ip ospf database self-originate Command	540
The show ip ospf database adv-router Command	540
debug Commands	541
Intermediate System to Intermediate System (IS-IS)	541
ISO Terminology	542
ISO Addressing and Topologies	543
NSAP Address Format	544
IS-IS View of NSAP Address	544
Configuring CLNS-Only IS-IS	545
Configuring Single Area IS-IS	545
Configuring Multi-area IS-IS.	547
Configuring Integrated IS-IS	550
Single-Area Integrated IS-IS	550
Multi-Area Integrated IS-IS	552
Monitoring IS-IS	554
Border Gateway Protocol (BGP)	556
BGP Terminology	556
BGP Concepts	557
Configuring BGP	558
Bare Minimum BGP—EBGP	559
Bare Minimum BGP—IGBP	560
Route Reflectors	562
BGP Confederations	564
Filtering	566
Summarization	567
BGP Security	567
Monitoring and Verifying BGP	567
Dial-on-Demand Routing	570

Static and Default Routes	570
Snapshot Routing	570
Route Redistribution	571
Configuring Snapshot Routing and Route Redistribution	571
Monitoring Snapshot Routing	574
OSPF Demand Circuits	575
Do Not Age (DNA)	576
Configuring an OSPF Demand Circuit	577
IPv6 Routing	579
Configuring RIP for IPv6	579
Basic IPv6 RIP Configuration	580
Default Routes and RIPng	582
Verifying RIPng Operation	582
Integrated IS-IS	584
Configuring IS-IS for IPv6	584
IS-IS Default Routes	586
Maximum Paths for IS-IS	586
Configuring BGP Extensions for IPv6	587
Configuring an IPv6 Neighbor Relationship	587
Configuring a BGP Router ID	590
Configuring BGP Peer Groups	590
Configuring Link-Local Addressing	591
Verifying BGP Operation	592
Using the show bgp Command	592
Using the show bgp ipv6 summary Command	593
Summary	594
<b>Chapter 6 Quality of Service (QoS)</b>	<b>595</b>
Introduction	596
QoS Overview	597
Bandwidth Reservation	598
Real-Time Transport Protocol	598
Understanding Real-Time Transport Protocol	598
Configuring RTP	599
Compressed Real-Time Transport Protocol	600
RTP Header Compression	601
cRTP Implementation	602
Verifying IP RTP Priority	604
Resource Reservation Protocol	605
Configuring RSVP	607
Verifying RSVP	607

Queuing	609
Selecting a Cisco IOS Queuing Method	610
First-In, First-Out Queuing	612
Low Latency Queuing (LLQ)	612
Priority Queuing (PQ)	613
Configuring Priority Queuing	615
Enabling Priority Queuing	615
Configuring the Queue Limits	616
Applying Your Priority List to an Interface	617
Verifying Priority Queuing	617
Priority Queuing Examples	618
Custom Queuing (CQ)	620
Configuring Custom Queuing	622
Enabling Custom Queuing	622
Adjusting Byte Counts and Queue Sizes	623
Applying Your Configuration to an Interface	624
Verifying Custom Queuing	624
Custom Queuing Examples	626
Weighted Fair Queuing	627
WFQ and IP Precedence	630
Planning Considerations	630
VIP Distributed Weight Fair Queuing (DWFQ)	633
Configuring Weighted Fair Queuing	634
Class-Based Weighted Fair Queuing (CB-WFQ)	636
Configuring Class-Based Weighted Fair Queuing	637
Defining Class Maps	638
Creating Policies	639
Attaching Policies to Interfaces	640
Verifying CB-WFQ	641
Why Packet Classification?	642
IP Precedence	643
IP QoS	644
Traffic Shaping	645
Configuring Traffic Shaping	646
Verifying Traffic Shaping	648
Link Fragmentation and Interleaving	648
Configuring Link Fragmentation and Interleaving	649
Verifying Link Fragmentation and Interleaving	650
Weighted Random Early Detection	651
Tail Drop	651

Flow-Based WRED	652
Configuring Congestion Avoidance with WRED	652
Verifying WRED	654
Data Compression Overview	655
The Data Compression Mechanism	655
Selecting a Cisco IOS Compression Method	656
Header Compression	656
Link and Payload Compression	657
Per-Interface Compression (Link Compression)	658
Per-Virtual Circuit Compression (Payload Compression)	658
Hardware Compression	659
Verifying Compression Operation	659
Configuring Packet Classification	659
IP Precedence	660
Verifying IP Precedence	660
Policy Routing	661
Configuring Policy Routing	661
Verifying Policy Routing	662
Call Admission Control	662
Configuring Call Admission Control (CAC)	664
Verifying Call Admission Control	665
Summary	668
<b>Chapter 7 Cisco Network Security</b>	<b>669</b>
Introduction	670
Attacks and Threats	670
Active Attacks	671
DOS/DDOS	671
Buffer Overflows	672
SYN Attacks	672
Spoofing	672
Man-in-the-Middle Attacks	673
Replay Attacks	674
TCP/IP Hijacking	674
WarDialing	675
Social Engineering	675
Passive Attacks	675
Vulnerability Scanning	675
Sniffing and Eavesdropping	676
Password Attacks	676
Brute Force Attacks	676

Dictionary-based Attacks	677
Malicious Code Attacks	677
Malware	677
Viruses	678
Trojan Horses	679
Logic Bombs	679
Worms	679
Back Door	680
Attacker Aids	680
Bad Key Exchanges	680
Hashing Pieces Separately	681
Using a Short Password to Generate a Long Key	681
Improperly Stored Private or Secret Keys	681
Detecting Breaches	682
What are the Key Steps after a Breach is Detected?	682
Reducing Vulnerabilities	682
Providing a Simple Security Network Architecture	683
Developing a Security Policy	683
AAA Overview	683
Authentication	684
Authorization	684
Accounting	684
AAA Servers	685
Method-Lists	685
Configuring AAA	686
Security Protocols	686
RADIUS	686
TACACS+	687
Comparing TACACS+ and RADIUS	689
Using RADIUS and TACACS+ for AAA Services	689
Configuring the RADIUS or TACACS+ Parameters	689
Configuring TACACS+ Parameters	690
Optional TACACS+ Commands	691
Configuring RADIUS Parameters	691
Configuring AAA Authentication	693
Configuring Login Authentication Using AAA	693
Configuring PPP Authentication Using AAA	696
Enabling Password Protection for Privileged EXEC Mode	697
The aaa authentication login Command	698
The aaa authentication ppp Command	698

The aaa authentication enable default Command	699
Configuring AAA Authorization	699
TACACS+ Configuration Example	702
Configuring AAA Accounting	703
Suppress Generation of Accounting Records for Null Username Sessions	706
RADIUS Configuration Example: AAA Accounting	706
Typical RAS Configuration Using AAA	708
Virtual Profiles and AAA	710
Example of Virtual Profiles Using Virtual Templates	710
Configuring Virtual Profiles Using AAA Configuration	712
Example of Virtual Profiles Using AAA Configuration	712
Example of Virtual Profiles Using Virtual Templates and AAA Configuration	713
Per-user Configuration Example	713
User Remote RADIUS Configuration	714
NAS Configuration (Central)	714
Monitoring and Verifying AAA Access Control	715
AAA debug and show Commands	715
Complete AAA Configuration Example	718
Authentication Proxy	720
How the Authentication Proxy Works	720
Benefits of Authentication Proxy	720
Restrictions of Authentication Proxy	721
Configuring Authentication Proxy	721
Configuring the HTTP Server	721
Configuring the Authentication Proxy	722
Authentication Proxy Configuration Example	723
Cisco Secure ACS	724
Overview of the Cisco Secure ACS	724
Benefits of the Cisco Secure ACS	725
Authentication	725
Authorization	725
Accounting	725
Placing Cisco Secure ACS in the Network	726
Configuration Example: Adding and Configuring an AAA Client	726
Cisco IP Security Hardware and Software	728
Cisco PIX Firewall	728
Cisco IOS Firewall Feature Set	729

Cisco Secure Intrusion Detection System	729
CSPM	729
ACLs	730
ACL Operation	730
Types of ACLs	732
Standard IP ACLs	732
Source Address and Wildcard Mask	733
The any and host Keywords	734
ACL Logging	734
Applying an ACL	735
Extended IP ACLs	735
Protocol	737
Source and Destination Port Number	737
The established Keyword	738
Named ACLs	739
Applying and Editing ACLs	740
Problems with ACLs	740
Lock-and-Key ACLs	740
Reflexive ACLs	742
Building Reflexive ACLs	744
Applying Reflexive ACLs	745
Context-based Access Control	745
The CBAC Process	747
Configuring CBAC	747
Inspection Rules	749
Applying the Inspection Rule	749
Configuring Port to Application Mapping	750
Configuring PAM	750
Protecting a Private Network	751
Protecting a Network Connected to the Internet	753
Protecting Server Access using Lock-and-Key	754
Protecting Public Servers Connected to the Internet	755
Applying Perimeter Security in IPv6	759
ACL Control Manager	760
The Basic Operation of ACLM	760
Using Templates and Defining Classes	760
Using Diff Viewer	761
Using the Optimizer and the Hits Optimizer	761
Configuring the ACLM	762
Configuration Example: Creating ACLs with ACLM	762

CSPM	765
Overview of VPN Technologies	765
Tunneling VPNs	765
Virtual Private Dial Networks	766
Intranet VPNs	766
Extranet VPNs	766
Access VPNs	767
L2TP	767
Configuring Cisco L2TP	768
An LAC Configuration Example	768
A LNS Configuration Example	768
PPTP Overview	769
Understanding Cryptography Concepts	771
Encryption Key Types	771
Standard Cryptographic Algorithms	771
DES	771
3DES	773
IDEA	773
AES (Rijndael)	773
Understanding Asymmetric Algorithms	774
DH	774
RSA	775
Skeme and Oakley Protocols	775
IPsec Concepts	775
VPN Terminology	776
IPsec	777
IPsec Core Layer 3 Protocols: ESP and AH	777
IPsec Communication Modes: Tunnel and Transport	779
IPsec Architecture	781
IKE	782
ISAKMP and IKE	782
SAs	784
VPN Operation	787
Authentication Methods	788
IPsec Limitations	790
Configuring ISAKMP/IKE	791
Configuring IPsec	792
RAS VPN	794
Configuring IPsec on the NAS	795
Configuring Cisco IPsec	795

IPsec Manual Keying Configuration	796
IPsec over GRE Tunnel Configuration	799
Verifying and Debugging VPN Operation	801
Wireless Security	804
Extensible Authentication Protocol	805
An Introduction to the 802.1x Standard	807
Per-Packet Authentication	809
Cisco LEAP	809
Configuration and Deployment of LEAP	811
Ensuring Authorization	811
MAC Filtering	812
Where in the Authentication/Association Process does MAC Filtering Occur?	812
MAC Spoofing	813
Accounting and Audit Trails	813
Implementing WEP	813
Defining WEP	813
Creating Privacy with WEP	813
The WEP Authentication Process	814
WEP Benefits and Advantages	814
WEP Disadvantages	815
Implementing WEP on the Cisco Aironet AP 3x0	815
Exploiting WEP	815
Security of 64-bit versus 128-bit Keys	816
Strengthening WEP	816
Summary	817
<b>Chapter 8 Cisco PIX Firewall</b>	<b>819</b>
Introduction	820
PIX Firewall Features	820
Embedded Operating System	820
The Adaptive Security Algorithm	820
State	821
Security Levels	821
How ASA Works	821
Technical Details for ASA	822
Advanced Protocol Handling	823
VPN Support	823
URL Filtering	823
NAT and PAT	824
High Availability	824

PIX Hardware	824
Models	824
PIX 501	826
PIX 506	826
PIX 506E	826
PIX 515	826
PIX 515E	826
PIX 520	826
PIX 525	827
PIX 535	827
Software Licensing and Upgrades	827
Licensing	828
Upgrading Software	829
Password Recovery	830
Factory Default Configurations	830
Access Modes	831
Basic Commands	832
Hostname and Domain Name	833
Configuring Interfaces	833
Static Routes	834
Password Configuration	834
Managing Configurations	835
The write Command	835
The copy Command	835
The configure Command	836
Resetting the System	836
The reload Command	836
Allowing Outbound Traffic	836
Configuring Dynamic Address Translation	836
Identity NAT and NAT Bypass	839
Blocking Outbound Traffic	841
ACLs	841
Outbound/Apply	845
Allowing Inbound Traffic	846
Static Address Translation	846
ACLs	846
Conduits	847
ICMP	847
Port Redirection	848
TurboACLs	849

Object Grouping	849
Configuring and Using Object Groups	849
ICMP-type Object Groups	849
Network Object Groups	850
Protocol Object Groups	850
Service Object Groups	851
Handling Advanced Protocols	852
Filtering Web Traffic	856
Filtering URLs	856
Websense and N2H2	857
Fine-Tuning and Monitoring the Filtering Process	858
Active Code Filtering	860
Filtering Java Applets	861
Filtering ActiveX Objects	861
Configuring Intrusion Detection	861
Supported Signatures	862
Configuring Auditing	862
Disabling Signatures	863
Configuring Shunning	863
Dynamic Host Control Protocol Functionality	864
DHCP Clients	864
DHCP Servers	865
Fragmentation Guard	867
Authentication, Authorization, and Accounting Floodguard	868
SYN Floodguard	868
Reverse-Path Forwarding	868
Unicast Routing	869
Static and Connected Routes	869
RIP	870
Stub Multicast Routing	871
SMR Configuration with Clients on a More	
Secure Interface	872
SMR Configuration with Clients on a Less	
Secure Interface	874
Access Control and Other Options	874
Point-to-Point Protocol over Ethernet	875
Configuring Console Authentication	877
Configuring Local Console Authentication	877
Configuring RADIUS and TACACS+ Console	
Authentication	878

Configuring Local Command Authorization	879
Configuring Authentication for Traffic Through the Firewall	880
Configuring Cut-through Proxy	880
Virtual HTTP	882
Virtual Telnet	884
Configuring Authorization for Traffic Through the Firewall	885
Configuring Accounting for Traffic Through the Firewall	885
Failover Concepts	886
Configuration Replication	887
IP and MAC Addresses Used for Failover	888
Failure Detection	888
Stateful Failover	889
Standard Failover Using a Failover Cable	890
Configuring and Enabling Failover	890
Monitoring Failover	892
LAN-Based Failover	894
Configuring and Enabling Failover	894
Monitoring Failover	898
Failing Back	900
Disabling Failover	900
Configuring Logging	901
Local Logging	901
Buffered Logging	901
Console Logging	902
Terminal Logging	902
Syslog	902
Logging Levels	903
Logging Facility	905
Disabling Specific Syslog Messages	905
Configuring Remote Access	906
Enabling SSH Access	906
Troubleshooting SSH	907
Telnet	908
Configuring SNMP	908
Configuring System Identification	909
Configuring Polling	909
Configuring Traps	909
Configuring System Date and Time	910
Setting and Verifying the Clock and Time Zone	910
Configuring and Verifying the Network Time Protocol	912

NTP Authentication	913
Configuring VPN	913
Allowing IPsec Traffic	914
Enabling IKE	914
Creating an ISAKMP Protection Suite	915
Defining an ISAKMP Pre-shared Key	916
Configuring Certificate Authority Support	916
Configuring the Hostname and Domain Name	917
Generating an RSA Key Pair	917
Specifying a CA to Be Used	918
Configuring CA Parameters	918
Authenticating the CA	918
Enrolling with the CA	920
Configuring Crypto ACLs	921
Defining a Transform Set	922
Bypassing NAT	922
Configuring a Crypto Map	923
Configuring Site-to-site IPsec without IKE (Manual IPsec)	925
Configuring PPTP	927
Configuration	927
Configuring L2TPwith IPsec	930
Dynamic Crypto Maps	931
Configuration	932
Configuring Support for the Cisco Software VPN Client	934
Mode Configuration	934
Extended Authentication	935
VPN Groups	935
Sample Configurations of PIX and VPN Clients	937
Troubleshooting PIX Firewall Hardware, Software, and Performance	943
Troubleshooting PIX Cabling	947
Troubleshooting Connectivity	948
Checking Addressing	948
Checking Routing	949
Checking Translation	950
Checking Access	952
Troubleshooting IPsec	953
IKE	953
IPsec	955
Capturing Traffic	958

Monitoring and Troubleshooting Performance	959
CPU Performance Monitoring	959
Memory Performance Monitoring	962
Network Performance Monitoring	963
Summary	964
<b>Chapter 9 Cisco Voice over IP</b>	<b>965</b>
Introduction	966
Telephone Calls – The “Traditional” Way	966
Toll Bypass	967
Analog	967
Basic Telephony	968
Dissecting an Analog Network	969
Voice Encoding: Standards and Techniques	972
Waveform Encoding	972
Source Encoding	973
Transcoders	973
DSP Provisioning	973
Analog Signaling	974
E&M Signaling	976
Analog Loop and Ground Start	978
Dial-Pulse Signaling	978
Dual-Tone Multifrequency (AKA Touch Tone)	979
Digital Transmission Techniques and Formats	979
Time-Division Multiplexing	980
Integrated Services Digital Network Signaling	981
ISDN Reference Points	981
Call Control Signaling	982
Channel Associated Signaling	982
Common Channel Signaling	982
Signaling System 7	982
Inside the Private Branch eXchange	987
Extension Termination	987
Trunk Termination	988
Call Processing and System Logic	988
Switching	988
PBX Terminology	988
Non-IP Alternatives to Traditional Telephony	989
Voice over Frame Relay	990
Frame Relay Benefits	990
When Does Frame Relay Make More Sense?	990

Voice over ATM	992
Where to Use It	992
Continuous Bit Rate	994
Voice over HDLC	995
Introduction to IP Telephony	995
Conferencing and Transcoding, and Other Services	995
Call Transfer	997
Call Forward	997
Call Park and Call Pickup	997
Music on Hold	998
Interactive Voice Response	998
IP Telephony Components	998
Cisco CallManager	999
Clustering	999
Call Detail Recording and Data Mining	1000
Cisco IP Phones	1002
Cisco Gateways	1002
Switches	1002
Cisco IP SoftPhone	1002
Cisco IP Telephony Applications	1002
Cisco Web Attendant	1002
Internet Communications Software	1003
Prepping the Network for Voice Service	1003
Analog Voice Interfaces	1003
Foreign Exchange Station Interface	1004
Foreign Exchange Office Interface	1004
FXS/FXO signaling	1004
Loop-Start	1005
Ground-Start	1005
E&M Interface	1006
Signaling Between Routers and PBXs	1009
VoIP Protocols	1010
H.323 Standard and Protocol Stack	1010
H.225	1011
H.245	1011
Real-Time Transport Protocol	1012
Registration, Administration, and Status	1012
H.323 Terminals (Endpoints)	1013
H.323 Gateways	1013
H.323 Gatekeepers	1013

Multipoint Control Units	1014
H.323 Call Stages	1014
H.323 Discovery and Registration	1014
Device Discovery and Registration	1015
Intra-zone Call Placement	1015
Inter-zone Call Placement	1016
H.323 Call Setup	1017
Logical Channel Setup	1018
Media Stream and Media Control Flows	1019
Call Termination	1020
H.323 Endpoint-to-Endpoint Signaling	1021
Session Initiation Protocol	1022
Session Initiation Protocol Components	1023
Session Initiation Protocol Messages	1024
Media Gateway Control Protocol	1025
MGCP Connections	1025
Skinny Station Protocol	1026
Simplified Messaging Desk Interface	1026
Cisco VoIP Hardware and Software	1026
Voice Modules and Cards	1026
Voice Network Modules	1027
Voice Interface Cards	1027
Installing VNMs and VICs	1029
E-1/T-1 Voice Connectivity	1029
1700 Series Router Configurations	1030
Cisco 1751 Modular Access Router	1030
The Cisco 1760 Modular Access Router	1030
3600 and 3700 Series Router Configurations	1030
7500 Series Router Configurations	1031
AS5350 and 5850 Universal Gateway Configuration	1031
Cisco Switches	1031
Catalyst 3500 Series Switches	1031
Catalyst 4x00 Series Switches	1032
Catalyst 6500 Series Switches	1033
Inline Power Options	1034
LAN Queuing for Video/Voice	1035
Quality of Service	1035
What Is Quality of Service?	1035
Applications for Quality of Service	1036
Levels of QoS	1036

Best-Effort Service	1036
Integrated Service	1036
Differentiated Service	1037
Why QoS Is Essential in VOIP Networks	1037
Configuring Voice Ports	1037
Configuring FXO or FXS Voice Ports	1038
Configuring E&M Ports	1040
Voice Port-Tuning Commands	1042
Concepts of Delay and Echo	1042
Fine-Tuning FXS/FXO Ports	1044
Fine-Tuning E&M Ports	1046
Configuring Dial Plans and Dial Peers	1048
Call Legs: POTS vs. Voice Network Dial Peers	1049
Creating and Implementing Dial Plans	1050
Configuring Dial Peers	1051
Number Expansion	1055
Direct Inward Dialing	1055
Configuring Trunking	1057
Trunks	1058
Tie Lines	1059
Private Line Automatic Ringdown	1059
plar-opx Commands	1060
Direct Voice Trunking versus Dial-Digit Interpretation	1060
Standard Dialing Analysis: Digit Interpretation	1061
Supervisory Disconnect	1061
Trunk Seizure: Wink-Start Signaling versus	
Immediate-Start Signaling versus Delay-Start	1063
Wink-Start Signaling	1063
Immediate-Start Signaling	1063
Delay-Start Signaling	1064
Configuring ISDN for Voice	1066
Configuring ISDN BRI Voice Ports	1066
Configuring ISDN PRI Voice Ports	1068
Configuring Q.931 Support	1070
Configuring CAS	1070
Configuring CCS	1071
Configuring T-CCS	1072
Configuring Gateways and Gatekeepers	1073
Configuring H.323 Gateway	1073
Configuring H.323 Gatekeeper	1074

H.323 ID Addresses	1075
Zone Prefixes	1075
Troubleshooting VoIP	1077
Troubleshooting Equipment, from Power On to Operating State	1077
Troubleshooting Cabling	1078
Troubleshooting Ports	1080
Troubleshooting Other Physical Layer Issues	1082
Layer 2 Troubleshooting	1090
Troubleshooting Serial Interfaces	1091
Troubleshooting Frame Relay	1092
Troubleshooting Asynchronous Transfer Mode	1095
Layer 3 Troubleshooting	1098
Troubleshooting IP	1098
Troubleshooting Voice Ports	1099
Troubleshooting FXS and FXO Voice Ports	1099
Troubleshooting E&M Voice Ports	1102
Troubleshooting Dial Peers	1103
Summary	1105
