

C O N T E N T S

Introduction	1
1 Graphs, Trees, and Hierarchies	3
1.1 Modeling a Graph in a Program	4
1.1.1 Adjacency Lists for Graphs	6
1.1.2 Adjacency Arrays for Graphs	6
1.1.3 Finding a Path in General Graphs in SQL	7
1.2 Defining Trees and Hierarchies	11
1.2.1 Trees	11
1.2.2 Properties of Hierarchies	11
1.2.3 Types of Hierarchies	12
1.3 Note on Recursion	13
2 Adjacency List Model	17
2.1 The Simple Adjacency List Model	17
2.2 The Simple Adjacency List Model Is Not Normalized	19
2.2.1 UPDATE Anomalies	19
2.2.2 INSERT Anomalies	20
2.2.3 DELETE Anomalies	21
2.2.4 Structural Anomalies	22
2.3 Fixing the Adjacency List Model	22
2.3.1 Concerning the Use of NULLs	25
2.4 Navigation in Adjacency List Model	25
2.4.1 Cursors and Procedural Code	25
2.4.2 Self-joins	26
2.5 Inserting Nodes in the Adjacency List Model	28
2.6 Deleting Nodes in the Adjacency List Model	28
2.6.1 Deleting an Entire Subtree	28
2.6.2 Promoting a Subordinate after Deletion	30
2.6.3 Promoting an Entire Subtree after Deletion	30
2.7 Leveled Adjacency List Model	31
2.7.1 Numbering the Levels	32
2.7.2 Aggregation in the Hierarchy	33

3	Path Enumeration Models	35
3.1	Finding the Depth of the Tree	37
3.2	Searching for Subordinates	37
3.3	Searching for Superiors	38
3.4	Deleting a Subtree	39
3.5	Deleting a Single Node	39
3.6	Inserting a New Node	40
3.7	Splitting up a Path String	40
3.8	The Edge Enumeration Model	42
3.9	XPath and XML	43
4	Nested Set Model of Hierarchies	45
4.1	Finding Root and Leaf Nodes	48
4.2	Finding Subtrees	49
4.3	Finding Levels and Paths in a Tree	50
4.3.1	Finding the Height of a Tree	50
4.3.2	Finding Levels of Subordinates	50
4.3.3	Finding Oldest and Youngest Subordinates	56
4.3.4	Finding a Path	58
4.3.5	Finding Relative Position	58
4.4	Functions in the Nested Sets Model	59
4.5	Deleting Nodes and Subtrees	60
4.5.1	Deleting Subtrees	61
4.5.2	Deleting a Single Node	63
4.5.3	Pruning a Set of Nodes from a Tree	65
4.6	Closing Gaps in the Tree	66
4.7	Summary Functions on Trees	69
4.7.1	Iterative Parts Update	70
4.7.2	Recursive Parts Update	74
4.8	Inserting and Updating Trees	77
4.8.1	Moving a Subtree within a Tree	80
4.8.2	MoveSubtree, Second Version	84
4.8.3	Subtree Duplication	85
4.8.4	Swapping Siblings	88

CONTENTS
ix

4.9	Converting Nested Sets Model to Adjacency List	89
4.10	Converting Adjacency List to Nested Sets Model	90
4.11	Separation of Edges and Nodes	92
4.11.1	Multiple Structures	92
4.11.2	Multiple Nodes	93
4.12	Comparing Nodes and Structure	94
4.13	Nested Sets Code in Other Languages	98
5	Frequent Insertion Trees	101
5.1	The Datatype of (lft, rgt)	103
5.1.1	Exploiting the Full Range of Integers	103
5.1.2	FLOAT, REAL, or DOUBLE PRECISION Numbers	103
5.1.3	NUMERIC(p,s) or DECIMAL(p,s) Numbers	104
5.2	Computing the Spread to Use	104
5.2.1	Varying the Spread	107
5.2.2	Divisor Parameter	108
5.2.3	Divisor via Formula	108
5.2.4	Divisor via Table Lookup	109
5.2.5	Partial Reorganization	109
5.2.6	Rightward Spread Growth	111
5.3	Total Reorganization	113
5.3.1	Reorganization with Lookup Table	113
5.3.2	Reorganization with Recursion	117
5.4	Rational Numbers and Nested Intervals Model	119
5.4.1	Partial Order Mappings	120
5.4.2	Summation of Coordinates	123
5.4.3	Finding Parent Encoding and Sibling Number	126
5.4.4	Calculating the Enumerated Path and Distance between Nodes	128
5.4.5	Building a Hierarchy	132
5.4.6	Depth-first Enumeration by Left Interval Boundary	133
5.4.7	Depth-first Enumeration by Right Interval Boundary	134
5.4.8	All Descendants of a Node	134
6	The Linear Version of the Nested Sets Model	137
6.1	Insertion and Deletion	138
6.2	Finding Paths	140

6.3	Finding Levels	140
6.4	Summary	141
7	Binary Trees	143
7.1	Binary Tree Traversals	145
7.2	Binary Tree Queries	147
7.2.1	Find Parent of a Node	148
7.2.2	Find Subtree at a Node	149
7.3	Deletion from a Binary Tree	150
7.4	Insertion into a Binary Tree	150
7.5	Heaps	150
7.6	Binary Tree Representation of Multiway Trees	154
7.7	The Stern-Brocot Numbers	155
8	Other Models for Trees	157
8.1	Adjacency List with Self-references	157
8.2	Subordinate Adjacency List	158
8.3	Hybrid Models	159
8.3.1	Adjacency and Nested Sets Model	159
8.3.2	Nested Set with Depth Model	160
8.3.3	Adjacency and Depth Model	160
8.3.4	Computed Hybrid Models	161
8.4	General Graphs	164
8.4.1	Detecting Paths in a Convergent Graph	164
8.4.2	Detecting Directed Cycles	167
9	Proprietary Extensions for Trees	169
9.1	Oracle Tree Extensions	169
9.2	XDB Tree Extension	171
9.3	DB2 and the WITH Operator	172
9.4	Date's EXPLODE Operator	173
9.5	Tillquist and Kuo's Proposals	173
9.6	Microsoft Extensions	174
9.7	Other Methods	174

10	Hierarchies in Data Modeling	175
10.1	Types of Hierarchies	179
10.2	DDL Constraints	180
10.2.1	Uniqueness Constraints	180
10.2.2	Disjoint Hierarchies	183
10.2.3	Representing 1:1, 1:m, and n:m Relationships	186
11	Hierarchical Encoding Schemes	191
11.1	ZIP codes	191
11.2	Dewey Decimal Classification	192
11.3	Strength and Weaknesses	193
11.4	Shop Categories	194
11.5	Statistical Tools for Decision Trees	197
12	Hierarchical Database Systems (IMS)	199
12.1	Types of Databases	199
12.2	Database History	200
12.2.1	DL/I	202
12.2.2	Control Blocks	202
12.2.3	Data Communications	202
12.2.4	Application Programs	203
12.2.5	Hierarchical Databases	203
12.2.6	Strengths and Weaknesses	203
12.3	Sample Hierarchical Database	204
12.3.1	Departmental Database	206
12.3.2	Student Database	206
12.3.3	Design Considerations	206
12.3.4	Example Database Expanded	206
12.3.5	Data Relationships	208
12.3.6	Hierarchical Sequence	209
12.3.7	Hierarchical Data Paths	209
12.3.8	Database Records	210
12.3.9	Segment Format	211
12.3.10	Segment Definitions	212
12.4	Summary	213
