Preface	xxi
Acknowledgments	xxv
Chapter 1 Wireless IP	1
1.1 Introduction	1
1.2 Wireless IP	1
1.3 Challenges for the Heterogeneous Environment	4
1.4 QoS and Resource Management	5
1.4.1 QoS Network Model	8
1.4.2 Resource Management Problems	9
1.5 Seamless Mobility and IP	10
1.6 Ubiquity and Dynamic Ad Hoc Networks	11
1.7 Security Considerations	12
1.8 Concluding Remarks	13
References	14
Part I: Wireless IP Evolution	15
Chapter 2 Evolution to Wireless IP	17
2.1 Introduction	17
2.2 Motivation for High Data Rates and IP	18
2.3 Radio Interface Technologies	20
2.4 Cost Advantages of 3G Wireless IP	22
2.5 Technology Trade-Offs for 3G Voice and Data	23
2.6 Other Market Segments	24
2.7 Open Application Platforms for Wireless Devices	25
2.8 Concluding Remarks	26
Chapter 3 Wide-Area Wireless IP Connectivity with the General Packet Radio Service	27
3.1 Introduction	27
3.2 GPRS Overview	28
3.2.1 GPRS Bearers	30

- 3.2.2 GPRS Protocols 31
- 3.3 Attach Procedure 34
- 3.4 Setting Up PDP Contexts 37
 - 3.4.1 Routing and Tunneling 40
- 3.5 Mobility Handling 41
 - 3.5.1 Cell Change 43
 - 3.5.2 Intra-SGSN Routing Area Change 44
 - 3.5.3 Inter-SGSN Routing Area Change 45
- 3.6 Summary 47
 - References 47

- Chapter 4 3G Networks and Standards 49**
 - 4.1 Introduction 49
 - 4.2 Evolution from 2G to 3G 50
 - 4.3 3G and Its Releases 51
 - 4.3.1 Release 3 (R3) 54
 - 4.3.2 Release 4 (R4) 56
 - 4.3.3 Release 5 (R5) 57
 - 4.4 3G Deployment Scenario 59
 - 4.5 Conclusion: Impact on the Existing Network 61
 - References 64

- Chapter 5 UTRAN Evolution to an All-IP Architecture 67**
 - 5.1 Introduction 67
 - 5.2 3GPP Reference Model 68
 - 5.3 UTRAN Overview 72
 - 5.3.1 SONET/SDH 73
 - 5.3.2 ATM 74
 - 5.4 UTRAN Transport Network 74
 - 5.4.1 LIPE 76
 - 5.4.2 CIP 78
 - 5.4.3 MPLS 79
 - 5.4.4 PPPmux/AAL5/ATM 81
 - 5.4.5 PPP/AAL2 81
 - 5.5 Comparison of IP-over-SONET and IP-over-ATM 82
 - 5.5.1 Protocol Overheads 82
 - 5.5.2 Bandwidth Management 83
 - 5.5.3 Network Management 83
 - 5.5.4 QoS 83
 - 5.5.5 Flow Control 84
 - 5.6 Summary 84
 - References 85

Chapter 6	Beyond 3G: 4G IP-Based Mobile Networks	87
6.1	Introduction	87
6.2	Drivers for the 4G Architecture	88
6.2.1	Support for IP-Based Traffic	88
6.2.2	Excellent Mobility Support	89
6.2.3	Support for Many Different Wireless Technologies	90
6.2.4	Free from Unnecessary Operator Linkage	90
6.2.5	Support for End-to-End Security	91
6.3	4G Architecture and Research Issues	92
6.4	4G Research Efforts	94
6.5	The NTRG 4G Test Bed	96
6.5.1	The Layered Architecture	96
6.5.2	Wireless Alternatives	97
6.5.3	Software Radio	97
6.5.4	Routing Protocols	98
6.5.5	Emulation Facilities	98
6.5.6	The Security Architecture	100
6.5.7	Real-Time Payment	101
6.5.8	Applications	102
6.6	Concluding Remarks	102
	References	103
Chapter 7	Ad Hoc Networks: A Mobile IPv6 Viewpoint	105
7.1	Introduction	105
7.1.1	Ad Hoc Networks	106
7.1.2	IPv6	110
7.2	Mobility of Ad Hoc Devices	113
7.3	Ad Hoc Mobility	114
7.3.1	Flooding	115
7.3.2	Proactive Routing Protocols	115
7.3.3	Reactive Routing Protocols	116
7.3.4	Hybrid Routing Protocols	116
7.3.5	Protocols That Make Use of the Known Physical Location	117
7.4	Macro-Mobility: Mobile IP	117
7.5	Micro-Mobility	119
7.5.1	Cellular IP	119
7.6	A Mechanism to Provide Global Connectivity for Ad Hoc Devices	121
7.6.1	Addressing	121
7.6.2	Finding an AR	122
7.6.3	Obtaining a COA	123
7.6.4	Communicating with an AR	124
7.6.5	Switching Between Ad Hoc and Global Communication	124

7.6.6	Example	125
7.6.7	Alternative Global Connectivity Proposal	126
7.7	Summary	128
	References	129
Part II: QoS and Resource Management		131
Chapter 8	Differentiated and Integrated Services for IP Applications over UMTS	133
8.1	Introduction	133
8.2	All-IP End-to-End Scenarios	138
8.2.1	Architectural Aspects	138
8.2.2	All-IP Scenarios	138
8.2.3	All-IP Scenario Using Differentiated Services	140
8.2.4	All-IP Scenario Using Integrated Services	141
8.2.5	Using RSVP to Control the PDP Context	143
8.3	UMTS Service Classes and Parameters	144
8.3.1	Mapping the End-to-End Service to Local Bearer Services	144
8.3.2	UMTS Traffic Descriptors	145
8.3.3	UMTS QoS Attributes	146
8.3.4	Conclusion	146
8.4	Suitability of Existing Integrated Services over RANs	147
8.4.1	GQoS	148
8.4.2	Controlled Load	148
8.4.3	Null Service	149
8.4.4	Conclusions	149
8.5	Proposed Integrated Services Parameters and Mapping	150
8.5.1	Media Description Using MIME	151
8.5.2	Proposed Additional Parameters for Real-Time Traffic	153
8.5.3	Proposed Additional Parameters for Non-Real-Time Traffic	154
8.6	Numerical Examples	154
8.6.1	SDU Format Information to Facilitate UED/UEP	154
8.6.2	(Residual) BER	155
8.6.3	Maximum Transfer Delay	156
8.6.4	PLR	157
8.7	Conclusions	159
	References	160
Chapter 9	Provisioning QoS in 3G Networks with RSVP Proxy	161
9.1	RSVP	163
9.2	Performance-Enhancing Proxies	167
9.3	Enabling End-to-End QoS for Packet Switched Services in UMTS	168
9.3.1	Resource Reservation with End-to-End RSVP	169

9.3.2	Service-Based Local Policy and RSVP Sender/Receiver Proxy	170
9.4	Simulation	172
9.5	A Short Summary of Related Standards	175
9.6	Summary	176
	References	177
	Selected Bibliography	177
Chapter 10	QoS Support for VoIP over Wireless	179
10.1	Introduction	179
10.1.1	Motivation	179
10.1.2	Challenges	180
10.2	Factors Influencing the Speech Quality in a Wireless VoIP System	183
10.2.1	Speech Codecs for Wireless VoIP	184
10.2.2	Transmission Impairments	185
10.3	Related Work	188
10.3.1	VoIP over WLANs	188
10.3.2	VoIP over Wireless WANs (Cellular Networks)	190
10.4	QoS for Wireless VoIP Using Selective Packet Prioritization	191
10.4.1	Analysis of the G.729 Frame Loss Concealment	191
10.4.2	Selective Packet Marking/Prioritization	193
10.4.3	System Architecture	194
10.4.4	Simulations	195
10.4.5	Conclusions	200
	References	201
Chapter 11	Delivering QoS in Mobile Ad Hoc IP Networks	203
11.1	Introduction	203
11.2	Mobile Ad Hoc Networks	205
11.2.1	Mobile Ad Hoc Network Characteristics	205
11.2.2	Ad Hoc Routing Protocols	206
11.2.3	Addressing Issues and Mobility Management	207
11.3	QoS Models	207
11.3.1	Integrated Services	208
11.3.2	Integrated Services in Ad Hoc Networks	210
11.3.3	DiffServ	212
11.3.4	DiffServ in Ad Hoc Networks	213
11.3.5	A Flexible QoS Model for Mobile Ad Hoc Networks	215
11.4	QoS Signaling	216
11.4.1	RSVP	216
11.4.2	INSIGNIA Signaling	217
11.5	QoS Routing	218

- 11.5.1 Core-Extraction Distributed Ad Hoc Routing 219
- 11.5.2 Ticket-Based Probing 221
- 11.6 Future Directions 222
- 11.7 Summary 224
- References 224

Chapter 12 Radio Access Control in Wireless IP Networks 227

- 12.1 Introduction 227
- 12.2 Overview of the Radio Access Control Problem 229
 - 12.2.1 Service Models 229
 - 12.2.2 Problem Formulation 230
- 12.3 CAC 231
 - 12.3.1 Overview 232
 - 12.3.2 Performance Evaluation 233
- 12.4 PAC 248
 - 12.4.1 Limits of UL Radio Resources for Non-Real-Time Packet Radio Access 248
 - 12.4.2 Dynamic Feedback Information Multiple Access 251
- 12.5 Concluding Remarks 253
- References 253

Chapter 13 RRM in Multicarrier Allocation-Based Systems 255

- 13.1 Introduction 255
- 13.2 A Multidimensional Concept of Radio Channels in Future Wireless IP Networks 257
- 13.3 The Impact of MCA Systems on Wireless IP Networks 260
- 13.4 System Model and Performance Measures 262
- 13.5 Frequency Diversity for an MCA System 264
 - 13.5.1 MCA Scheme Without Frequency Diversity 264
 - 13.5.2 MCA Scheme with Frequency Diversity 265
- 13.6 Power Control for an MCA System 267
 - 13.6.1 Scheme 1: MCA with Power Control 269
 - 13.6.2 Scheme 2: MCA with Frequency Diversity and Power Control 270
- 13.7 Carrier-Grouping for an MCA System 272
- 13.8 Concluding Remarks 275
- Acknowledgments 275
- References 275

Part III: TCP/IP in Wireless IP Networks 277

Chapter 14 TCP/IP over Next-Generation Broadband Wireless Access Networks 279

- 14.1 Introduction 279

14.2	TCP Background	281
14.2.1	Performance of TCP on Wireless Links	283
14.3	Design Features for 2G-BWA Networks	284
14.3.1	MAC Layer	284
14.3.2	Physical Layer	287
14.4	End-to-End Performance	289
14.4.1	Simulation Methodology	289
14.4.2	MAC Model	291
14.4.3	PHY Model	291
14.4.4	Wireless Channel Model	292
14.4.5	Traffic Model	293
14.5	Results	295
14.6	Concluding Remarks	299
	References	300
 Chapter 15 Reliable Multicast Congestion Control for TCP/IP in Hybrid Networks		 303
15.1	Introduction	303
15.1.1	Major Challenges	304
15.2	Background and Related Studies	305
15.2.1	TCP Congestion Control and the TCP Formula	305
15.2.2	Rate-Based Multicast Congestion Control	306
15.2.3	Window-Based Multicast Congestion Control	307
15.3	Reliable Multicast Congestion Control Schemes	307
15.3.1	A Generic RMCC Framework	307
15.3.2	Enhanced Mechanisms for Hierarchical RMCC over Hybrid Networks	310
15.3.3	RMCC-Preliminary	310
15.3.4	RMCC-Whetten-Enhanced	312
15.3.5	RMCC-Mobile	313
15.4	Performance Evaluation	316
15.4.1	Simulation Objectives and Settings	316
15.4.2	Configuration 1—A Simple Network	317
15.4.3	Configuration 2—A Wired/Wireless Network with Wireless Links of Different Loss Rates	319
15.4.4	Configuration 3—A Large Network with Two Base Stations	321
15.4.5	Configuration 4—A Wired/Wireless/Mobile Network with Mobile Nodes	324
15.4.6	TCP Fairness Index	325
15.5	Summary and Future Enhancement: Use of Belief Functions	327
15.5.1	BF Calculus: An Overview	327
15.5.2	An Abstract Example	327

15.5.3	Future Directions	330
15.6	Summary	330
	Acknowledgments	330
	References	331
Part IV: Handoff, Mobility, and Signaling		333
Chapter 16 Mobile IP: A Challenge in the Mobile World		335
16.1	Introduction	335
16.2	The Need for Mobile IP	336
16.3	The Mobile IP in Wireless Networks: A Simple Architecture	338
16.3.1	Agent Discovery	339
16.3.2	Registration	340
16.3.3	Tunneling	341
16.3.4	Mobile IP Datagram	342
16.4	Open Issues in Mobile IPv4	343
16.5	Mobile IPv6	346
16.6	Possible Solutions for Micro-Mobility in Mobile IP Networks	350
16.6.1	Cellular IP	350
16.6.2	HAWAII	352
16.6.3	Hierarchical Mobile IP	354
16.7	Conclusions and Future Directions	355
	References	356
Chapter 17 IP Micro-Mobility Management Using Host-Based Routing		359
17.1	Introduction and Background	359
17.1.1	Chapter Overview	359
17.1.2	The Application-Layer Macro-Mobility Management Alternative	360
17.1.3	Micro-Mobility Management	363
17.2	HBR Overview	365
17.2.1	A Generic HBR Solution for IP Micro-Mobility	366
17.2.2	Comparison Between HBR Schemes	369
17.2.3	Comparison with Ad Hoc Mobility Schemes	371
17.3	Performance Issues	373
17.3.1	A Qualitative Perspective	373
17.3.2	Quantifying Performance	375
17.4	Performance Results	376
17.4.1	Simulation Environment	376
17.4.2	Simulation Results	378
17.4.3	Results from Laboratory Prototype	386

17.5	Conclusions and Future Directions	388
	References	390
Chapter 18	Handoff Initiation in Mobile IPv6	393
18.1	Introduction	393
18.1.1	Mobile IPv6 Operation	394
18.1.2	Handoff Initiation	395
18.1.3	Handoff Performance	397
18.1.4	Comparison with Other IP Mobility Schemes	397
18.2	Mathematical Models	399
18.2.1	Basic Definitions	399
18.2.2	Eager Cell Switching	400
18.2.3	Lazy Cell Switching	401
18.3	Experimental Results in Test Bed	403
18.3.1	The Mobile IPv6 Test Bed	403
18.3.2	Experimental Approach	404
18.3.3	Overview of Performed Experiments	405
18.3.4	Default Settings	406
18.3.5	Varying Advertisement Frequency	407
18.4	Optimizing Protocol Configuration	408
18.5	Building Wide Experiment	410
18.5.1	Experimental Setup	410
18.5.2	Results	410
18.6	Conclusions and Future Directions	412
	References	413
Chapter 19	Location Independent Network Architecture and Mobility Handling in IPv6	415
19.1	Introduction	415
19.2	LINA	417
19.2.1	Basic Concept	417
19.2.2	Embedded Addressing Model	418
19.2.3	Embedding and Extraction	419
19.2.4	Generalized ID	420
19.2.5	Mapping: Resolving Interface Locator from Node Identifier	420
19.2.6	LINA Communication Model	421
19.3	LIN6: An Application of LINA to IPv6	422
19.3.1	Embedded Addressing in LIN6	422
19.3.2	Embedment in LIN6	423
19.3.3	Generalized Identifier in LIN6	424
19.3.4	Finding Designated Mapping Agents	425
19.3.5	Handoff of a Mobile Node	426

19.3.6	Compatibility with Traditional IPv6 Nodes	427
19.4	Communication Example of LIN6	427
19.4.1	Bootstrap	428
19.4.2	Communication Between LIN6 Nodes	429
19.4.3	Handoff of a LIN6 Node	430
19.5	Implementation	431
19.5.1	Implementation Status	431
19.5.2	Motion Detection Mechanism with IPv6	431
19.6	Protocol Evaluation of Mobility Handling	432
19.6.1	Experimental Network	432
19.6.2	Experimental Results and Considerations	432
19.7	Comparison of LIN6 and Mobile IPv6	437
19.7.1	Single Point of Failure: Mapping Agent and HA	437
19.7.2	Overhead of Packet Header Length	437
19.7.3	End-to-End Communication	438
19.8	Summary	438
	References	439
Chapter 20	Distributed Signaling and Routing Protocols in iCAR	441
20.1	Introduction	441
20.2	An Overview of the iCAR System	443
20.2.1	Basic Operations	443
20.3	Signaling and Routing Protocol	446
20.3.1	Connection Setup	446
20.3.2	ARS Routing	449
20.3.3	Connection Release	451
20.4	Simulation Results and Discussion	452
20.5	Conclusion and Future Work	455
	References	455
Chapter 21	Reducing Link and Signaling Costs in Mobile IP	457
21.1	Introduction	457
21.2	The New Cost-Efficient Scheme	460
21.2.1	The Mathematical Model	460
21.2.2	Optimal Solution	461
21.3	Performance Evaluation	464
21.3.1	The Total Cost	464
21.3.2	The Signaling Cost	466
21.3.3	The Number of Route Optimizations	467
21.4	Summary	469
	References	469

Chapter 22	Enabling WAP Handoffs Between GSM and IEEE 802.11b Bearers with Mobile IP	471
22.1	Introduction	471
22.2	Reinventing in the Name of Wireless	473
22.3	Converging in the Name of Progress	474
22.3.1	The Mobile IP	474
22.3.2	The WAP Transport Protocols	476
22.4	Experimental Setup	478
22.5	Experimental Results	479
22.6	Mobile WAP Network Components	482
22.7	Summary	483
	References	483
Chapter 23	Interworking and Handover Mechanisms Between WLAN and UMTS	485
23.1	Introduction	485
23.2	Interworking System Architectures	486
23.3	Interconnection Between 3G-SGSN and WLAN AP by Emulating RAN	487
23.4	Interconnection Between GGSN and WLAN AP by Emulating 3G-SGSN	491
23.5	Interconnection Between UMTS and WLAN Through VAP	492
23.6	Interconnection Between UMTS and WLAN Through Mobility Gateway	494
23.7	Interconnection Between UMTS and WLAN Based on Mobile IP	497
23.8	Handover Between IEEE 802.11 and UMTS	498
23.9	Handover Aspects Between IEEE 802.11 WLAN and UMTS Based on Mobile IP	499
23.10	Conclusions	501
	References	502
Chapter 24	Location-Based Push Architectures for the Mobile Internet	503
24.1	Introduction	503
24.2	Push for Mobile Networks	504
24.2.1	Types of Push	504
24.2.2	Push Scenarios	505
24.2.3	Security for Push	506
24.3	Technical Aspects	507
24.3.1	Bearer Establishment	507
24.3.2	Application Layer Signaling	507
24.3.3	Architecture Components for SIP-Based Push	515

24.4	Realization	518
24.4.1	Content Provider Push and Location-Based Push	518
24.4.2	Application-Related Push for Local Location Assistant (LoL@)	520
24.5	Summary	521
24.6	Conclusions and Future Directions	522
	References	523
Chapter 25	Signaling Network Architecture in Wireless IP Overlay Networks	525
25.1	Introduction	525
25.2	Network Model	527
25.2.1	Dedicated Signaling Network Architecture	528
25.2.2	Architecture Components	529
25.2.3	Signaling Home Agent	530
25.2.4	Location Database	530
25.2.5	Resource Database	531
25.2.6	HA	531
25.3	Functions of Signaling Network	531
25.3.1	Terminal Addressing	531
25.4	Signaling and Location Management	532
25.5	Mobility Management	534
25.5.1	Resource Management	536
25.6	Basic Issues	537
25.6.1	Paging and Power Consumption of Idle Terminal	537
25.6.2	Generic Extension Interface for Adding a New Type of Wireless Network as an RAN	537
25.6.3	Capacity of the Networks as a Communication System	538
25.6.4	Geographical Coverage of Service and BAN Capacity	538
25.6.5	Handover Latency	538
25.7	Concluding Remarks	540
	References	540
Part V: Services and Applications		543
Chapter 26	Mobile Content Distribution for Wireless IP Networks	545
26.1	Introduction	545
26.2	Content Distribution in Wireline Web	547
26.2.1	A Taxonomy of Content Distribution	547
26.2.2	Network Scaling	548
26.2.3	Endpoint Acceleration	551
26.2.4	Protocol and Content Optimization	552
26.3	Content Distribution in Wireless IP Networks	553
26.3.1	Air Interface Protocol Optimization	553

26.3.2	Content Adaptation and Proxy Services for Wireless Terminals	555
26.4	Discussions	555
26.5	Concluding Remarks	556
	References	556
Chapter 27	Perceptual QoS for Wireless and IP Networks	559
27.1	Introduction	559
27.2	QoS	560
27.2.1	Voice	560
27.2.2	Video	561
27.3	Simulation Model	562
27.3.1	Quality Measurement Tools	562
27.3.2	Link Level Simulation Tools	562
27.3.3	Simulation Model	563
27.4	Video over WLAN	563
27.4.1	Video over 5-GHz WLAN	563
27.4.2	Video over IEEE 802.11b	565
27.5	UMTS Speech Quality	565
27.5.1	Simulation Model	566
27.5.2	Results	567
27.6	Concluding Remarks	568
	References	568
Chapter 28	Transcoding for the Mobile Internet: The Case of Video Transcoding	571
28.1	Introduction	571
28.2	Adaptation Techniques for Multimedia Content Distribution	572
28.2.1	Adaptation Technique for Mobile Web Accesses	572
28.2.2	Issues of Viewing a Video Stream in a Mobile Environment	573
28.2.3	Adaptation Techniques for Video Streaming	574
28.3	Related Works	576
28.4	Standardization Issues	576
28.5	Video Transcoding System Architecture and Control Mechanism	577
28.5.1	Basic Concept of the System	577
28.5.2	System Architecture	578
28.5.3	Control Mechanism	579
28.5.4	MPEG Transcoder	581
28.6	Features of the Video Transcoding System	582
28.6.1	Experimental Video Transcoding System	582
28.6.2	Characteristics of the Experimental System	583
28.7	Concluding Remarks	584
	References	585

Chapter 29 On Security in Wireless and IP Networks	587
29.1 Introduction	587
29.2 Cellular Networks Security	588
29.2.1 AMPS	589
29.2.2 TIA/EIA-41	589
29.2.3 TIA/EIA-136 (NA-TDMA)	590
29.2.4 IS-95 (CDMA)	592
29.2.5 GSM	592
29.2.6 GPRS	593
