Part I Introduction

1 Wireless Network

- 1.1 Introduction
- 1.2 Intelligent Network
 - 1.2.1 IN Protocol Architecture
 - 1.2.2 IN Elements
 - 1.2.3 Wireless Service Requirements
 - 1.2.4 Wireless IN Services
 - 1.2.5 IN Standards
- 1.3 Network Architecture
- 1.4 Protocol Architecture
- 1.5 Channel Structure
 - 1.5.1 RF Channel
 - 1.5.2 Physical Channel
 - 1.5.3 Logical Channel
- 1.6 Narrowband and Wideband Systems
- 1.7 Multiple Access
 - 1.7.1 Frequency Division Multiple Access
 - 1.7.2 Time Division Multiple Access
 - 1.7.3 Code Division Multiple Access
 - 1.7.4 Space Division Multiple Access
- 1.8 Summary

2 Cellular Principles

- 2.1 Introduction
- 2.2 Cellular Hierarchy
- 2.3 System Management
 - 2.3.1 Link Quality Measurement
 - 2.3.2 Cell Selection
 - 2.3.3 Channel Selection/Assignment
 - 2.3.4 Handover
 - 2.3.5 Mobility Support
- 2.4 System Performance
 - 2.4.1 Interference Control
 - 2.4.2 Diversity Strategies

- 2.4.3 Variable Data Rate Control
- 2.4.4 Capacity Improvement Techniques
- 2.4.5 Battery-Saving Techniques
- 2.5 Cellular Reuse Pattern
- 2.6 Macrocellular Reuse Pattern
 - 2.6.1 Reuse Factor (Number of Cells per Cluster)
 - 2.6.2 Reuse Ratio
 - 2.6.3 Positioning of the Co-Cells
- 2.7 Microcellular Reuse Pattern
 - 2.7.1 Reuse Factor (Number of Cells per Cluster)
 - 2.7.2 Reuse Ratio
 - 2.7.3 Positioning of the Co-Cells
- 2.8 Interference in Narrowband and Wideband Systems
- 2.9 Interference in Narrowband Macrocellular Systems
 - 2.9.1 Downlink Interference—Omnidirectional Antenna
 - 2.9.2 Uplink Interference—Omnidirectional Antenna
 - 2.9.3 Downlink Interference—Directional Antenna
 - 2.9.4 Uplink Interference—Directional Antenna
 - 2.9.5 Examples
- 2.10 Interference in Narrowband Microcellular Systems
 - 2.10.1 Propagation
 - 2.10.2 Uplink Interference
 - 2.10.3 Downlink Interference
 - 2.10.4 Examples
- 2.11 Interference in Wideband Systems
 - 2.11.1 Uplink Interference
 - 2.11.2 Downlink Interference
- 2.12 Network Capacity
 - 2.12.1 Narrowband Systems
 - 2.12.2 Wideband Systems
 - 2.12.3 Uplink Load Factor
 - 2.12.4 Downlink Load Factor
- 2.13 Summary

3 Multiple Access

- 3.1 Introduction
- 3.2 Signal Domains
 - 3.2.1 Frequency Domain
 - 3.2.2 Time Domain
 - 3.2.3 Code Domain
 - 3.2.4 Space Domain
 - 3.2.5 Brief Remarks on Signal Domains

- 3.3 Duplexing
 - 3.3.1 Frequency Division Duplexing
 - 3.3.2 Time Division Duplexing
 - 3.3.3 Code Division Duplexing
 - 3.3.4 Space Division Duplexing
 - 3.3.5 Brief Remarks on Duplexing Techniques
- 3.4 Multiple-Access Categories
- 3.5 Scheduled Multiple Access
 - 3.5.1 Frequency Division Multiple Access
 - 3.5.2 Time Division Multiple Access
 - 3.5.3 Code Division Multiple Access
 - 3.5.4 Space Division Multiple Access
 - 3.5.5 Brief Remarks on Scheduled Multiple-Access Techniques
- 3.6 Random Multiple Access
 - 3.6.1 ALOHA
 - 3.6.2 Splitting Algorithms
 - 3.6.3 Carrier Sense Multiple Access
 - 3.6.4 Brief Remarks on Random Multiple-Access Techniques
- 3.7 Controlled Multiple Access
 - 3.7.1 Polling Controlled
 - 3.7.2 Token Controlled
 - 3.7.3 Brief Remarks on Controlled Multiple-Access Techniques
- 3.8 Hybrid Multiple Access
 - 3.8.1 Reservation-ALOHA (R-ALOHA)
 - 3.8.2 Packet Reservation Multiple Access (PRMA)
 - 3.8.3 Distributed Queuing Request Update Multiple Access (DQRUMA)
 - 3.8.4 Dynamic Slot Assignment (DSA⁺⁺)
 - 3.8.5 Dynamic TDMA with Piggyback Reservation (DTDMA/PR)
 - 3.8.6 Mobile Access Scheme Based on Contention and Reservation for ATM (MASCARA)
 - 3.8.7 Dynamic TDMA with Time Division Duplex (DTDMA/TDD)
 - 3.8.8 Resource Auction Multiple Access (RAMA)
 - 3.8.9 Brief Remarks on Hybrid Multiple-Access Techniques
- 3.9 Summary

Part II 2G Systems

4 GSM

- 4.1 Introduction
- 4.2 Features and Services
 - 4.2.1 Teleservices
 - 4.2.2 Bearer Services
 - 4.2.3 Supplementary Services
- 4.3 Architecture
 - 4.3.1 Mobile Station Subsystem
 - 4.3.2 Base Station Subsystem
 - 4.3.3 Network and Switching Subsystem
 - 4.3.4 Operation and Support Subsystem
 - 4.3.5 Open Interfaces
- 4.4 Multiple Access
 - 4.4.1 Signal Processing
 - 4.4.2 Multiple Access
 - 4.4.3 Physical Channels
 - 4.4.4 Burst Formats
 - 4.4.5 Logical Channels
 - 4.4.6 Multiframes
- 4.5 The Logical Channels
 - 4.5.1 Traffic Channels
 - 4.5.2 Frequency Correction Channel
 - 4.5.3 Synchronization Channel
 - 4.5.4 Broadcast Control Channel
 - 4.5.5 Paging Channel
 - 4.5.6 Access Grant Channel
 - 4.5.7 Random Access Channel
 - 4.5.8 Stand-Alone Dedicated Control Channel
 - 4.5.9 Slow Associated Control Channel
 - 4.5.10 Fast Associated Control Channel
- 4.6 Messages
 - 4.6.1 DLC Messages
 - 4.6.2 RRM Messages
 - 4.6.3 CM Messages
 - 4.6.4 MM Messages
- 4.7 Call Management
 - 4.7.1 Mobile Initialization
 - 4.7.2 Location Update
 - 4.7.3 Authentication
 - 4.7.4 Ciphering
 - 4.7.5 Mobile Station Termination

- 4.7.6 Mobile Station Origination
- 4.7.7 Handover
- 4.7.8 Call Clearing
- 4.8 Frequency Hopping
- 4.9 Discontinuous Transmission
- 4.10 Power Control
- 4.11 Spectral Efficiency
- 4.12 Summary

5 cdmaOne

- 5.1 Introduction
- 5.2 Features and Services
 - 5.2.1 Voice Features
 - 5.2.2 Short Message Service Features
- 5.3 Architecture
 - 5.3.1 Mobile Station
 - 5.3.2 Base Station
 - 5.3.3 Mobile Switching Center
 - 5.3.4 Home Location Register
 - 5.3.5 Visitor Location Register
 - 5.3.6 Authentication Center
 - 5.3.7 Equipment Identity Register
 - 5.3.8 Message Center
 - 5.3.9 Short Message Entity
 - 5.3.10 Data Message Handler
 - 5.3.11 Operations System
 - 5.3.12 Interworking Function
 - 5.3.13 External Networks
 - 5.3.14 Interface Reference Points
- 5.4 Multiple-Access Structure
 - 5.4.1 Forward Link
 - 5.4.2 Reverse Link
 - 5.4.3 Physical Channels
 - 5.4.4 Logical Channels
- 5.5 The Logical Channels
 - 5.5.1 Pilot Channel
 - 5.5.2 Sync Channel
 - 5.5.3 Paging Channel
 - 5.5.4 Access Channel
 - 5.5.5 Traffic Channel—Forward and Reverse Links
- 5.6 Signaling Format
- 5.7 Messages, Orders, and Parameters

- 5.8 Messages and Orders and Logical Channels
 - 5.8.1 Pilot Channel
 - 5.8.2 Sync Channel
 - 5.8.3 Paging Channel
 - 5.8.4 Access Channel
 - 5.8.5 Traffic Channel: Forward and Reverse Links
 - 5.8.6 Forward Traffic Channel
 - 5.8.7 Reverse Traffic Channel
- 5.9 Mobile Station Call Processing
 - 5.9.1 Mobile Station Initialization State
 - 5.9.2 Mobile Station Idle State
 - 5.9.3 System Access State
 - 5.9.4 Mobile Station Control on the Traffic Channel State
- 5.10 Base Station Call Processing
 - 5.10.1 Pilot and Sync Channel Processing
 - 5.10.2 Paging Channel Processing
 - 5.10.3 Access Channel Processing
 - 5.10.4 Traffic Channel Processing
- 5.11 Authentication, Message Encryption, and Voice Privacy
- 5.12 Authentication
 - 5.12.1 Updating the Shared Secret Data
 - 5.12.2 Mobile Station Registrations
 - 5.12.3 Mobile Station Originations
 - 5.12.4 Mobile Station Terminations
 - 5.12.5 Mobile Station Data Burst
 - 5.12.6 Unique Challenge-Response Procedure
- 5.13 Message Encryption
- 5.14 Voice Privacy
- 5.15 Roaming
- 5.16 Handoff
 - 5.16.1 Types of Handoff
 - 5.16.2 Handoff and Pilot Sets
 - 5.16.3 Handoff Parameters
 - 5.16.4 Handoff Messages
 - 5.16.5 Pilot Sets Updating
- 5.17 Power Control
 - 5.17.1 Reverse-Link Power Control
 - 5.17.2 Forward-Link Power Control
- 5.18 Call Procedures
 - 5.18.1 Mobile Station Origination
 - 5.18.2 Mobile Station Termination
 - 5.18.3 Call Disconnect
- 5.19 EIA/TIA/IS-95B

- 5.19.1 Increase in the Transmission Rate
- 5.19.2 Power Control
- 5.19.3 Soft Handoff Criteria
- 5.19.4 Hard Handoff
- 5.19.5 Idle Handoff
- 5.19.6 Conclusions
- 5.20 Summary

Part III Wireless Data

6 Wireless Data Technology

- 6.1 Introduction
- 6.2 General Packet Radio Service
 - 6.2.1 Network Architecture
 - 6.2.2 Protocol Architecture
 - 6.2.3 Data Flow and Data Structure
 - 6.2.4 Physical Channels and Logical Channels
 - 6.2.5 Medium Access
 - 6.2.6 Data Transfer Procedure
 - 6.2.7 Mobile-Originated Data Transfer
 - 6.2.8 Mobile-Terminated Data Transfer
 - 6.2.9 Throughput Performance
 - 6.2.10 GPRS—Summary
- 6.3 EIA/TIA/IS-95B
- 6.4 High Data Rate
 - 6.4.1 HDR Solution
 - 6.4.2 Network Architecture
 - 6.4.3 Protocol Architecture
 - 6.4.4 Channels and Channel Structure
 - 6.4.5 Medium Access
 - 6.4.6 Throughput Performance
 - 6.4.7 Handoff Features
 - 6.4.8 HDR Summary
- 6.5 Summary

Part IV 3G Systems

7 IMT-2000

- 7.1 Introduction
- 7.2 Some Definitions

- 7.3 Frequency Allocation
- 7.4 Features and Services
- 7.5 Traffic Classes
- 7.6 IMT-2000 System and IMT-2000 Family
 - 7.6.1 Interfaces
 - 7.6.2 Global Roaming
- 7.7 Specific Functions
 - 7.7.1 Overall System Access Control Functions
 - 7.7.2 Radio Resource Management and Control Functions
 - 7.7.3 Random-Access Functions
 - 7.7.4 Radio Resource Request Acceptability Functions
 - 7.7.5 Channel Coding Function
 - 7.7.6 Handover Function
 - 7.7.7 Location Management and Geographic Position-Finding Functions
 - 7.7.8 Mobile Call Handling Functions
 - 7.7.9 Data Coding and Compression Functions
 - 7.7.10 Network Intelligence and Service Control Functions
 - 7.7.11 User Privacy and Network Security Functions
 - 7.7.12 Emergency Services Functions
 - 7.7.13 Charging Functions
 - 7.7.14 Support of Users Function
 - 7.7.15 Subscriber Data Management Functions
 - 7.7.16 Messaging Service Management Functions
 - 7.7.17 Software-Configurable Terminals Functions
- 7.8 Network Architecture
 - 7.8.1 Physical Entities—Reference Model
 - 7.8.2 Interface—Reference Points
- 7.9 Physical Entities and Functional Entities
 - 7.9.1 User Identity Module
 - 7.9.2 Mobile Terminal
 - 7.9.3 Base Station
 - 7.9.4 Radio Network Controller
 - 7.9.5 Authentication Center
 - 7.9.6 Drift MSC
 - 7.9.7 Gateway Location Register
 - 7.9.8 Gateway MSC
 - 7.9.9 Home Location Register
 - 7.9.10 Intelligent Peripheral
 - 7.9.11 Mobile Switching Center
 - 7.9.12 Packet Data Gateway Node
 - 7.9.13 Packet Data Serving Node
 - 7.9.14 Service Control Point

- 7.9.15 Service Data Point
- 7.9.16 Visitor Location Register
- 7.10 Functional Entities and Their Interrelations
- 7.11 Application of the IMT-2000 Family Member Concept
 - 7.11.1 Radio Transmission Technology
 - 7.11.2 Core Network
 - 7.11.3 Radio Transmission Technologies and Core Networks
- 7.12 Toward 3G
 - 7.12.1 An Overview
 - 7.12.2 Network Architecture
- 7.13 Summary

8 UTRA

- 8.1 Introduction
- 8.2 Network Architecture
- 8.3 Protocol Architecture
 - 8.3.1 Radio Network Layer
 - 8.3.2 Transport Network Layer
- 8.4 Radio Interface Protocol Architecture
 - 8.4.1 Layer 3
 - 8.4.2 Layer 2
 - 8.4.3 Layer 1
- 8.5 Logical Channels
- 8.6 Transport Channels and Indicators
- 8.7 Physical Channels and Physical Signals
 - 8.7.1 UTRA FDD Physical Channels
 - 8.7.2 UTRA TDD Physical Channels
- 8.8 Mapping of Channels
- 8.9 Physical Layer Transmission Chain
- 8.10 Channel and Frame Structures
 - 8.10.1 UTRA FDD Uplink Physical Channels
 - 8.10.2 UTRA FDD Downlink Physical Channels
 - 8.10.3 UTRA TDD-3.84
 - 8.10.4 UTRA TDD-1.28
- 8.11 Spreading and Modulation
 - 8.11.1 Uplink Spreading
 - 8.11.2 Downlink Spreading
- 8.12 Spreading Codes
 - 8.12.1 Channelization Codes
 - 8.12.2 Uplink Scrambling Codes
 - 8.12.3 Downlink Scrambling Codes
- 8.13 UTRA Procedures

- 8.13.1 Cell Search
- 8.13.2 Common Physical Channel Synchronization
- 8.13.3 Radio Link Establishment and Monitoring
- 8.13.4 Uplink DPCCCH and DPDCH Reception
- 8.13.5 Uplink Power Control
- 8.13.6 Downlink Power Control
- 8.13.7 Paging Procedure
- 8.13.8 Random-Access Procedure
- 8.13.9 CPCH Access Procedure
- 8.13.10 Transmit Diversity
- 8.13.11 Handover Procedure
- 8.13.12 Timing Advance
- 8.13.13 Dynamic Channel Allocation
- 8.14 Interference Issues
- 8.15 Summary

9 cdma2000

- 9.1 Introduction
- 9.2 Network Architecture
 - 9.2.1 Network Entities
 - 9.2.2 Reference Points
- 9.3 Radio Interface Protocol Architecture
 - 9.3.1 Upper Layers
 - 9.3.2 Layer 2
 - 9.3.3 Layer 1
- 9.4 Logical Channels
- 9.5 Physical Channels
- 9.6 Mapping of Channels
- 9.7 Achievable Rates
- 9.8 Forward Link
 - 9.8.1 General
 - 9.8.2 Spreading Rate
 - 9.8.3 Physical Channels
 - 9.8.4 Radio Configuration
 - 9.8.5 Power Control
 - 9.8.6 Transmit Diversity
 - 9.8.7 Transmission Block
- 9.9 Reverse Link
 - 9.9.1 General
 - 9.9.2 Spreading Rate
 - 9.9.3 Physical Channels
 - 9.9.4 Radio Configuration
 - 9.9.5 Transmission Block

- 9.10 Forward Physical Channels
 - 9.10.1 Forward Pilot Channel
 - 9.10.2 Forward Transmit Diversity Pilot Channel
 - 9.10.3 Forward Auxiliary Pilot Channel
 - 9.10.4 Forward Auxiliary Transmit Diversity Pilot Channel
 - 9.10.5 Forward Dedicated Auxiliary Pilot Channel
 - 9.10.6 Forward Synchronization Channel
 - 9.10.7 Forward Paging Channel
 - 9.10.8 Forward Broadcast Control Channel
 - 9.10.9 Forward Quick Paging Channel
 - 9.10.10 Forward Common Control Channel
 - 9.10.11 Forward Common Assignment Channel
 - 9.10.12 Forward Common Power Control Channel
 - 9.10.13 Forward Fundamental Channel and Forward Supplemental Code Channel
 - 9.10.14 Forward Fundamental Channel and Forward Supplemental Channel
 - 9.10.15 Forward Dedicated Control Channel
- 9.11 Reverse Physical Channels
 - 9.11.1 Reverse Access Channel
 - 9.11.2 Reverse Enhanced Access Channel
 - 9.11.3 Reverse Common Control Channel
 - 9.11.4 Reverse Pilot Channel and Reverse Power Control Subchannel
 - 9.11.5 Reverse Fundamental Channel and Reverse Supplemental Code Channel
 - 9.11.6 Reverse Fundamental Channel and Reverse Supplemental Channel
 - 9.11.7 Reverse Dedicated Control Channel
- 9.12 High-Rate Packet Data Access
 - 9.12.1 Forward Link—General
 - 9.12.2 Forward-Link Channels
 - 9.12.3 Forward-Link Quadrature Spreading
 - 9.12.4 Forward-Link Data Rates and Modulation Parameters
 - 9.12.5 Forward-Link Transmission
 - 9.12.6 Reverse Link—General
 - 9.12.7 Reverse-Link Channels
 - 9.12.8 Reverse-Link Quadrature Spreading
 - 9.12.9 Reverse-Link Data Rates and Modulation Parameters
 - 9.12.10 Reverse-Link Transmission

- 9.12.11 Open-Loop Power Control Operation
- 9.12.12 Closed-Loop Power Control Operation
- 9.13 Summary

Part V Appendices

A Open Systems Interconnection

B Signaling System Number 7

C Spread Spectrum

- C.1 Correlation
- C.2 Pseudonoise Sequences
- C.3 Walsh Codes
- C.4 Orthogonal Variable Spreading Factor Codes
- C.5 Rake Receiver
- C.6 Processing Gain
- C.7 Direct Sequence Spread Spectrum
- C.8 Frequency Hopping Spread Spectrum

D Positioning of the Interferers in a Microcellular Grid

- D.1 Collinear Type
- D.2 Even Noncollinear Type
- D.3 Odd Nonprime Noncollinear Type
- D.4 Prime Noncollinear Type
