

Contents

Foreword by Alan Cox	xxxi
Introduction	xxxiii
Chapter 1: Getting Started	1
An Introduction to UNIX, Linux, and GNU	1
What Is UNIX?	1
A Brief History of UNIX	2
UNIX Philosophy	2
What Is Linux?	3
The GNU Project and the Free Software Foundation	3
Linux Distributions	4
Programming Linux	5
Linux Programs	5
The C Compiler	6
<i>Try It Out—Our First Linux C Program</i>	7
Development System Roadmap	8
Applications	8
Header Files	8
Library Files	9
Static Libraries	10
<i>Try It Out—Static Libraries</i>	10
Shared Libraries	12
Getting Help	13
<i>Try It Out—Manual Pages and info</i>	14
Summary	15
Chapter 2: Shell Programming	17
Why Program with a Shell?	18
A Bit of Philosophy	18
What Is a Shell?	19
Pipes and Redirection	21
Redirecting Output	21
Redirecting Input	22
Pipes	23

The Shell as a Programming Language	23
Interactive Programs	23
Creating a Script	25
Making a Script Executable	26
Shell Syntax	27
Variables	28
Quoting	28
<i>Try It Out—Variables</i>	29
Environment Variables	29
Parameter Variables	30
<i>Try It Out—Parameter and Environment Variables</i>	31
Conditions	32
The test, or [, Command	32
Control Structures	35
if	35
<i>Try It Out—Using the if Command</i>	35
elif	36
<i>Try It Out—Doing Further Checks with an elif</i>	36
A Problem with Variables	36
for	37
<i>Try It Out—for Loop with Fixed Strings</i>	38
<i>Try It Out—for Loop with Wildcard Expansion</i>	38
while	39
<i>Try It Out—Here We Go Again, Again</i>	40
until	41
case	41
<i>Try It Out—Case I: User Input</i>	42
<i>Try It Out—Case II: Putting Patterns Together</i>	42
<i>Try It Out—Case III: Executing Multiple Statements</i>	43
Lists	44
<i>Try It Out—AND Lists</i>	45
<i>Try It Out—OR Lists</i>	46
Statement Blocks	47
Functions	47
<i>Try It Out—A Simple Function</i>	47
<i>Try It Out—Returning a Value</i>	49
Commands	50
break	50
The : Command	51

continue	51
The . Command	52
<i>Try It Out—The Dot Command</i>	53
echo	53
eval	54
exec	54
exit n	55
export	55
<i>Try It Out—Exporting Variables</i>	56
expr	56
printf	57
return	58
set	58
shift	59
trap	60
<i>Try It Out—Trapping Signals</i>	60
unset	62
Two More Useful Commands and Regular Expressions	62
<i>Try It Out—find with Tests</i>	64
<i>Try It Out—Basic grep Usage</i>	66
<i>Try It Out—Regular Expressions</i>	68
Command Execution	69
Arithmetic Expansion	70
Parameter Expansion	70
<i>Try It Out—Parameter Processing</i>	72
Here Documents	73
<i>Try It Out—Using Here Documents</i>	73
<i>Try It Out—Another Use for a Here Document</i>	74
Debugging Scripts	75
Going Graphical—The Dialog Utility	76
<i>Try It Out—Using the dialog Utility</i>	78
<i>Try It Out</i>	79
Putting It All Together	80
Requirements	81
Design	81
<i>Try It Out—A CD Application</i>	83
Notes on the Application	90
Summary	90

Contents

Chapter 3: Working with Files	91
Linux File Structure	92
Directories	92
Files and Devices	93
/dev/console	93
/dev/tty	93
/dev/null	94
System Calls and Device Drivers	94
Library Functions	95
Low-Level File Access	96
write	96
read	97
open	98
Initial Permissions	100
umask	100
close	101
ioctl	102
<i>Try It Out—A File Copy Program</i>	102
Other System Calls for Managing Files	104
lseek	104
fstat, stat, and lstat	104
dup and dup2	106
The Standard I/O Library	107
fopen	108
fread	108
fwrite	109
fclose	109
fflush	109
fseek	110
fgetc, getc, and getchar	110
fputc, putc, and putchar	110
fgets and gets	111
Formatted Input and Output	111
printf, fprintf, and sprintf	112
scanf, fscanf, and sscanf	114
Other Stream Functions	116
<i>Try It Out—Another File Copy Program</i>	116
Stream Errors	117
Streams and File Descriptors	118
File and Directory Maintenance	118
chmod	118
chown	119

unlink, link, and symlink	119
mkdir and rmdir	119
chdir and getcwd	120
Scanning Directories	120
opendir	121
readdir	121
telldir	122
seekdir	122
closedir	122
<i>Try It Out—A Directory-Scanning Program</i>	122
Errors	125
strerror	125
perror	126
The /proc File System	126
Advanced Topics: fcntl and mmap	130
fcntl	130
mmap	131
<i>Try It Out—Using mmap</i>	132
Summary	134
 Chapter 4: The Linux Environment	 135
 Program Arguments	 135
<i>Try It Out—Program Arguments</i>	137
getopt	138
<i>Try It Out—getopt</i>	139
getopt_long	140
Environment Variables	142
<i>Try It Out—getenv and putenv</i>	143
Use of Environment Variables	144
The environ Variable	145
<i>Try It Out—environ</i>	145
Time and Date	146
<i>Try It Out—time</i>	146
<i>Try It Out—gmtime</i>	148
<i>Try It Out—ctime</i>	150
<i>Try It Out—strftime and strptime</i>	152
Temporary Files	153
<i>Try It Out—tmpnam and tmpfile</i>	154
User Information	155
<i>Try It Out—User Information</i>	156
Host Information	158
<i>Try It Out—Host Information</i>	159

Contents

Logging	160
<i>Try It Out—syslog</i>	162
<i>Try It Out—logmask</i>	163
Resources and Limits	164
<i>Try It Out—Resource Limits</i>	167
Summary	169
Chapter 5: Terminals	171
Reading from and Writing to the Terminal	171
<i>Try It Out—Menu Routines in C</i>	172
Canonical versus Non-Canonical Modes	173
Handling Redirected Output	174
<i>Try It Out—Checking for Output Redirection</i>	175
Talking to the Terminal	176
<i>Try It Out—Using /dev/tty</i>	176
The Terminal Driver and the General Terminal Interface	178
Overview	178
Hardware Model	179
The termios Structure	180
Input Modes	181
Output Modes	182
Control Modes	183
Local Modes	183
Special Control Characters	184
Characters	185
The TIME and MIN Values	185
Accessing Terminal Modes from the Shell	186
Setting Terminal Modes from the Command Prompt	187
Terminal Speed	187
Additional Functions	188
<i>Try It Out—A Password Program with termios</i>	189
<i>Try It Out—Reading Each Character</i>	190
Terminal Output	191
Terminal Type	191
Identify Your Terminal Type	192
Using terminfo Capabilities	195
<i>Try It Out—Total Terminal Control</i>	198
Detecting Keystrokes	200
<i>Try It Out—Your Very Own kbhit</i>	200
Virtual Consoles	202
Pseudo Terminals	204
Summary	204

Chapter 6: Managing Text-Based Screens with curses	205
Compiling with curses	206
Concepts	207
<i>Try It Out—A Simple curses Program</i>	208
Initialization and Termination	210
Output to the Screen	210
Reading from the Screen	211
Clearing the Screen	211
Moving the Cursor	212
Character Attributes	212
<i>Try It Out—Moving, Inserting, and Attributes</i>	212
The Keyboard	214
Keyboard Modes	215
Keyboard Input	215
<i>Try It Out—Keyboard Modes and Input</i>	216
Windows	217
The WINDOW Structure	217
Generalized Functions	218
Moving and Updating a Window	218
<i>Try It Out—Multiple Windows</i>	219
Optimizing Screen Refreshes	222
Subwindows	223
<i>Try It Out—Subwindows</i>	223
The Keypad	225
<i>Try It Out—Using the Keypad</i>	226
Color	227
<i>Try It Out—Colors</i>	229
Redefining Colors	230
Pads	230
<i>Try It Out—Using a Pad</i>	231
The CD Collection Application	233
<i>Try It Out—A New CD Collection Application</i>	233
<i>Try It Out—Looking at main</i>	235
<i>Try It Out—The Menu</i>	236
<i>Try It Out—Database File Manipulation</i>	238
<i>Try It Out—Querying the CD Database</i>	243
Summary	247
Chapter 7: Data Management	249
Managing Memory	249
Simple Memory Allocation	250
<i>Try It Out—Simple Memory Allocation</i>	250

Contents

Allocating Lots of Memory	251
<i>Try It Out—Asking for All Physical Memory</i>	251
<i>Try It Out—Available Memory</i>	252
Abusing Memory	254
<i>Try It Out—Abuse Your Memory</i>	254
The Null Pointer	255
<i>Try It Out—Accessing a Null Pointer</i>	255
Freeing Memory	256
<i>Try It Out—Freeing Memory</i>	257
Other Memory Allocation Functions	257
File Locking	258
Creating Lock Files	258
<i>Try It Out—Creating a Lock File</i>	259
<i>Try It Out—Cooperative Lock Files</i>	260
Locking Regions	262
The F_GETLK Command	263
The F_SETLK Command	264
The F_SETLKW Command	264
Use of read and write with Locking	264
<i>Try It Out—Locking a File with fcntl</i>	265
<i>Try It Out—Testing Locks on a File</i>	267
Competing Locks	270
<i>Try It Out—Competing Locks</i>	270
Other Lock Commands	273
Deadlocks	273
Databases	274
The dbm Database	274
Introduction to dbm	274
Getting dbm	275
Troubleshooting and Reinstalling dbm	275
The dbm Routines	276
dbm Access Functions	277
dbm_open	277
dbm_store	277
dbm_fetch	277
dbm_close	278
<i>Try It Out—A Simple dbm Database</i>	278
Additional dbm Functions	280
dbm_delete	281
dbm_error	281

dbm_clearerr	281
dbm_firstkey and dbm_nextkey	281
<i>Try It Out—Retrieving and Deleting</i>	281
The CD Application	282
Updating the Design	283
The CD Database Application Using dbm	283
<i>Try It Out—cd_data.h</i>	284
<i>Try It Out—app_ui.c</i>	285
<i>Try It Out—cd_access.c</i>	295
Summary	302
 Chapter 8: MySQL	 303
 Installation	 304
Precompiled Packages	304
Post-Install Configuration	306
Post-Installation Troubleshooting	310
MySQL Administration	310
Commands	310
myisamchk	311
mysql	311
mysqladmin	312
mysqlbug	313
mysqlimport	314
mysqlshow	314
Creating Users and Giving Them Permissions	314
grant	314
revoke	316
Passwords	316
Creating a Database	317
Data Types	318
Boolean	318
Character	318
Number	318
Temporal	319
Creating a Table	319
Graphical Tools	322
Accessing MySQL Data from C	325
Connection Routines	326
Error Handling	330

Contents

Executing SQL Statements	331
SQL Statements That Return No Data	331
Discovering What You Inserted	334
Try It Out	334
Try It Out	335
Statements That Return Data	336
Processing Returned Data	340
Miscellaneous Functions	346
The CD Database Application	347
Creating the Tables	348
Adding Some Data	350
Try It Out	352
Accessing the Application Data from C	353
Interface Definition	353
Test Application Interface	354
Implementing the Interface	355
Summary	363
 Chapter 9: Development Tools	 365
 Problems of Multiple Source Files	 365
The make Command and Makefiles	366
The Syntax of Makefiles	366
Options and Parameters to make	367
Dependencies	367
Rules	368
Try It Out—A Simple Makefile	368
Comments in a Makefile	370
Macros in a Makefile	370
Try It Out—A Makefile with Macros	370
Multiple Targets	372
Try It Out—Multiple Targets	372
Built-in Rules	374
Suffix and Pattern Rules	375
Managing Libraries with make	376
Try It Out—Managing a Library	376
Advanced Topic: Makefiles and Subdirectories	378
GNU make and gcc	378
Try It Out—gcc -MM	379
Source Code Control	379
RCS	380
The rcs Command	380
The ci Command	381

The co Command	381
The rlog Command	382
The rcsdiff Command	383
Identifying Revisions	383
<i>Try It Out—GNU make with RCS</i>	385
The ident Command	385
<i>Try It Out—ident</i>	385
SCCS	386
Comparing RCS and SCCS	386
CVS	386
Using CVS Locally	387
Accessing CVS over a Network	390
gCVS	390
BitKeeper	391
Writing a Manual Page	391
Distributing Software	395
The patch Program	395
Other Distribution Utilities	397
RPM Packages	399
Working with RPM Package Files	400
Installing RPM Packages	400
Building RPM Packages	401
Gathering the Software	401
Creating an RPM Spec File	403
Building an RPM Package with rpmbuild	407
Other Package Formats	410
Development Environments	410
xwpe	410
C-Forge	411
KDevelop	412
Other Environments	414
Summary	415
Chapter 10: Debugging	417
Types of Errors	417
General Debugging Techniques	418
A Program with Bugs	418
Code Inspection	421
Instrumentation	422
<i>Try It Out—Debug Information</i>	423
Debugging without Recompiling	424
Controlled Execution	424

Contents

Debugging with gdb	425
Starting gdb	425
Running a Program	426
Stack Trace	427
Examining Variables	427
Listing the Program	428
Setting Breakpoints	429
Patching with the Debugger	432
Learning More about gdb	433
More Debugging Tools	434
Lint: Removing the Fluff from Your Programs	434
Function Call Tools	436
ctags	436
cxref	436
cflow	437
Execution Profiling with prof/gprof	438
Assertions	439
<i>Try It Out—assert</i>	439
Memory Debugging	440
ElectricFence	441
<i>Try It Out—ElectricFence</i>	441
valgrind	442
<i>Try It Out—valgrind</i>	442
Summary	444
 Chapter 11: Processes and Signals	 445
 What Is a Process?	 445
Process Structure	446
The Process Table	447
Viewing Processes	447
System Processes	449
Process Scheduling	450
Starting New Processes	451
<i>Try It Out—system</i>	452
Replacing a Process Image	453
<i>Try It Out—exec1p</i>	454
Duplicating a Process Image	455
<i>Try It Out—fork</i>	457
Waiting for a Process	458
<i>Try It Out—wait</i>	458
Zombie Processes	460
<i>Try It Out—Zombies</i>	460

Input and Output Redirection	462
<i>Try It Out—Redirection</i>	462
Threads	463
Signals	463
<i>Try It Out—Signal Handling</i>	465
Sending Signals	467
<i>Try It Out—An Alarm Clock</i>	468
A Robust Signals Interface	470
<i>Try It Out—sigaction</i>	470
Signal Sets	471
sigaction Flags	473
Common Signal Reference	474
Summary	476
 Chapter 12: POSIX Threads	 477
What Is a Thread?	477
Advantages and Drawbacks of Threads	478
A First Threads Program	479
<i>Try It Out—A Simple Threaded Program</i>	481
Simultaneous Execution	483
<i>Try It Out—Simultaneous Execution of Two Threads</i>	483
Synchronization	485
Synchronization with Semaphores	485
<i>Try It Out—A Thread Semaphore</i>	486
Synchronization with Mutexes	490
<i>Try It Out—A Thread Mutex</i>	490
Thread Attributes	494
<i>Try It Out—Setting the Detached State Attribute</i>	495
Thread Attributes—Scheduling	497
<i>Try It Out—Scheduling</i>	497
Canceling a Thread	498
<i>Try It Out—Canceling a Thread</i>	499
Threads in Abundance	501
<i>Try It Out—Many Threads</i>	501
Summary	504
 Chapter 13: Inter-Process Communication: Pipes	 505
What Is a Pipe?	505
Process Pipes	506
popen	506
pclose	507
<i>Try It Out—Reading Output from an External Program</i>	507
	xix

Sending Output to popen	508
<i>Try It Out—Sending Output to an External Program</i>	508
Passing More Data	509
<i>Try It Out—Reading Larger Amounts of Data from a Pipe</i>	509
How popen Is Implemented	510
<i>Try It Out—popen Starts a Shell</i>	510
The Pipe Call	511
<i>Try It Out—The pipe Function</i>	512
<i>Try It Out—Pipes across a fork</i>	513
Parent and Child Processes	514
<i>Try It Out—Pipes and exec</i>	515
Reading Closed Pipes	516
Pipes Used as Standard Input and Output	517
File Descriptor Manipulation by close and dup	517
<i>Try It Out—Pipes and dup</i>	518
Named Pipes: FIFOs	520
<i>Try It Out—Creating a Named Pipe</i>	521
Accessing a FIFO	522
<i>Try It Out—Accessing a FIFO File</i>	522
Opening a FIFO with open	523
<i>Try It Out—Opening FIFO Files</i>	524
O_RDONLY and O_WRONLY with No O_NONBLOCK	525
O_RDONLY with O_NONBLOCK and O_WRONLY	526
Reading and Writing FIFOs	526
<i>Try It Out—Inter-Process Communication with FIFOs</i>	527
Advanced Topic: Client/Server Using FIFOs	529
<i>Try It Out—An Example Client/Server Application</i>	530
The CD Database Application	533
Aims	534
Implementation	534
<i>Try It Out—The Header File, cliserv.h</i>	536
Client Interface Functions	538
<i>Try It Out—The Client's Interpreter</i>	538
Searching the Database	542
<i>Try It Out—Searching</i>	543
The Server Interface	544
<i>Try It Out—server.c</i>	544
The Pipe	548
<i>Try It Out—Pipes Implementation Header</i>	549
Server-Side Functions	549
<i>Try It Out—Server Functions</i>	549
<i>Try It Out—Plumbing the Pipes</i>	551

Client-Side Functions	552
<i>Try It Out—Client Functions</i>	552
<i>Try It Out—Getting Server Results</i>	553
Application Summary	554
Summary	555
 Chapter 14: Semaphores, Shared Memory, and Message Queues	 557
Semaphores	557
Semaphore Definition	558
A Theoretical Example	559
Linux Semaphore Facilities	560
semget	561
semop	561
semctl	562
Using Semaphores	563
<i>Try It Out—Semaphores</i>	563
Shared Memory	566
shmget	568
shmat	568
shmdt	569
shmctl	569
<i>Try It Out—Shared Memory</i>	570
Message Queues	573
msgget	574
msgsnd	574
msgrcv	575
msgctl	576
<i>Try It Out—Message Queues</i>	576
The CD Database Application	579
<i>Try It Out—Revising the Server Functions</i>	580
<i>Try It Out—Revising the Client Functions</i>	581
IPC Status Commands	583
Semaphores	583
Shared Memory	584
Message Queues	584
Summary	585
 Chapter 15: Sockets	 587
What Is a Socket?	588
Socket Connections	588
<i>Try It Out—A Simple Local Client</i>	588
<i>Try It Out—A Simple Local Server</i>	590

Contents

Socket Attributes	592
Socket Domains	592
Socket Types	593
Socket Protocols	594
Creating a Socket	594
Socket Addresses	595
Naming a Socket	596
Creating a Socket Queue	596
Accepting Connections	597
Requesting Connections	597
Closing a Socket	598
Socket Communications	598
<i>Try It Out—Network Client</i>	599
<i>Try It Out—Network Server</i>	600
Host and Network Byte Ordering	601
Network Information	602
<i>Try It Out—Network Information</i>	604
<i>Try It Out—Connecting to a Standard Service</i>	606
The Internet Daemon (inetd)	608
Socket Options	609
Multiple Clients	610
<i>Try It Out—A Server for Multiple Clients</i>	610
select	613
<i>Try It Out—select</i>	614
Multiple Clients	616
<i>Try It Out—An Improved Multiple Client/Server</i>	616
Datagrams	619
Summary	622
 Chapter 16: Programming GNOME Using GTK+	 623
 Introducing X	 623
X Server	624
X Client	624
X Protocol	624
Xlib	624
Toolkits	625
Window Managers	625
Other Ways to GUI—Platform-Independent Windowing APIs	625
Introducing GTK+	626
GLib Type System	626
GTK+ Object System	627

Introducing GNOME	628
Installing the GNOME/GTK+ Development Libraries	629
<i>Try It Out—A Plain GtkWindow</i>	631
Events, Signals, and Callbacks	632
<i>Try It Out—A Callback Function</i>	633
Packing Box Widgets	635
<i>Try It Out—Widget Container Layout</i>	636
GTK+ Widgets	638
GtkWindow	638
GtkEntry	639
<i>Try It Out—Username and Password Entry</i>	640
GtkSpinButton	643
<i>Try It Out—GtkSpinButton</i>	644
GtkButton	644
GtkToggleButton	645
GtkCheckButton	645
GtkRadioButton	645
<i>Try It Out—GtkCheckButton, GtkToggleButton, and GtkRadioButton</i>	646
GtkTreeView	648
<i>Try It Out—GtkTreeView</i>	650
GNOME Widgets	652
<i>Try It Out—A GNOME Window</i>	653
GNOME Menus	653
<i>Try It Out—GNOME Menus</i>	655
<i>Try It Out—Menus with GNOME Macros</i>	657
Dialogs	658
GtkDialog	658
Modal Dialog Box	660
Nonmodal Dialogs	661
GtkMessageDialog	662
CD Database Application	663
<i>Try It Out—cdapp_gnome.h</i>	664
<i>Try It Out—interface.c</i>	665
<i>Try It Out—callbacks.c</i>	669
<i>Try It Out—main.c</i>	673
Summary	675
 Chapter 17: Programming KDE Using Qt	 677
Introducing KDE and Qt	677
Installing Qt	678
<i>Try It Out—QMainWindow</i>	680

Contents

Signals and Slots	681
<i>Try It Out—Signals and Slots</i>	683
<i>Try It Out—Using QBoxLayout Classes</i>	686
Qt Widgets	688
QLineEdit	688
<i>Try It Out—QLineEdit</i>	689
Qt Buttons	691
QPushButton—The Button Base Class	691
QPushButton	692
QCheckBox	692
QRadioButton	693
<i>Try It Out—QButtons</i>	694
QComboBox	695
<i>Try It Out—QComboBox</i>	697
QListView	699
<i>Try It Out—QListView</i>	700
Dialogs	701
QDialog	702
Modal Dialogs	702
Nonmodal Dialogs	703
Semimodal Dialog	703
QMessageBox	704
QInputDialog	705
Using qmake to Simplify Writing Makefiles	707
Menus and Toolbars	708
<i>Try It Out—A KDE Application with Menus and Toolbars</i>	709
CD Database Application Using KDE/Qt	711
<i>Try It Out—MainWindow</i>	712
<i>Try It Out—AddCdDialog</i>	715
<i>Try It Out—LogonDialog</i>	717
<i>Try It Out—main.cpp</i>	719
Summary	720
 Chapter 18: Device Drivers	 721
 Writing Device Drivers	 721
Devices	722
Device Classes	723
User and Kernel Space	724
What Goes Where?	725
Building Modules	725
Data Types	727
<i>Try It Out—A Kernel Module</i>	727

Character Devices	729
File Operations	730
A Sample Driver: schar	732
The MSG Macro	733
Registering the Device	734
Module Usage Count	735
Open and Release	735
Reading the Device	736
The current Task	737
Wait Queues	738
Writing to the Device	739
Nonblocking Reads	740
Seeking	741
ioctl	741
Checking User Rights	744
poll	744
<i>Try It Out—Reading and Writing to schar</i>	745
<i>Try It Out—ioctl</i>	746
Module Parameters	747
<i>Try It Out—modinfo</i>	747
proc File System Interface	748
How schar Behaves	750
Time and Jiffies	750
Small Delays	752
Timers	752
<i>Try It Out—The Timer Implementation in schar</i>	754
Giving Up the Processor	755
Task Queues	756
The Predefined Task Queues	756
Memory Management	758
Virtual Memory Areas	759
Address Space	759
Types of Memory Locations	760
Getting Memory in Device Drivers	761
kmalloc	762
vmalloc	762
Transferring Data between User and Kernel Space	763
Moving More Data	764
Simple Memory Mapping	765
I/O Memory	766
Assignment of Devices in lommap	768
I/O Memory mmap	768
<i>Try It Out—The lommap Module</i>	769

Contents

I/O Ports	771
Interrupt Handling	772
Allocating an Interrupt	773
Getting an Appropriate IRQ	774
The IRQ Handler	775
Bottom Halves	776
Re-entrancy	777
Disabling Single Interrupts	778
Atomicity	779
Protecting Critical Sections	780
Basic Spin Locks	780
Reader and Writer Locks	780
Automated Locking	781
Block Devices	781
radimo—A Simple RAM Disk Module	782
Size Issues	783
Registering a Block Device	784
Media Change	785
ioctl for Block Devices	785
The request Function	786
The Buffer Cache	788
<i>Try It Out—radimo</i>	789
Going Further	790
Debugging	790
Oops Tracing	790
Debugging Modules	792
The Magic Key	793
Kernel Debugger—kdb	793
Remote Debugging	794
General Notes on Debugging	794
Portability	795
Data Types	795
Endianness	795
Alignment	796
Anatomy of the Kernel Source	796
Summary	797
 Chapter 19: Standards for Linux	 799
 The C Programming Language	 800
A Brief History Lesson	800
The GNU Compiler Collection	801

gcc Options	801
Compiler Options for Standards Tracking	802
Define Options for Standard Tracking	802
Compiler Options for Warnings	802
Interfaces and the LSB	803
LSB Standard Libraries	804
A Brief History Lesson	804
Using the LSB Standard for Libraries	805
LSB Users and Groups	805
LSB System Initialization	805
The Filesystem Hierarchy Standard	807
/bin	808
/boot	808
/dev	808
/etc	809
/home	809
/lib	809
/mnt	809
/opt	809
/root	809
/sbin	809
/tmp	809
/usr	810
/var	810
Further Reading about Standards	810
Summary	810
