## Borland C++BuilderT 6 Developer's Guide

By Bob Swart, Mark Cashman, Paul Gustavson, Jarrod Hollingworth

Publisher: Que

Pub Date: March 1st, 2003 ISBN: 0-672-32480-6

**Copyright** About the Author. Acknowledgments We Want to Hear from You! Introduction Who Should Read This Book? How This Book Is Organized The Companion CD-ROM C++Builder System Requirements. Conventions Used in This Book Part I: C++Builder Essentials. Chapter 1. Introduction to C++Builder C++ Language The VCL, Forms, and Components. Creating Your First Real Program Commonly Asked Questions What's New in C++Builder 6? Linux, Kylix, CLX, EJB, and C++Builder. The C++ Standard Library. Summary Chapter 2. C++Builder Projects and More on the IDE C++Builder IDE Features Understanding C++Builder Projects. Understanding and Using Packages Using the C++Builder Interactive Debugger. Advanced Debugging Speeding Up Compile Times. Summary. Chapter 3. Programming in C++Builder Better Programming Practices in C++Builder VCL Overview. Review of the Component Palette. Creating User Interfaces Nonvisual Components and Programming. Creating Multithreaded Applications

Summary

Chapter 4. Creating Custom Components
Creating, Compiling, and Installing Packages
Creating Custom Components
The Streaming Mechanism
<u>Distributing Components</u>
<u>Summary</u>
Chapter 5. Creating Property and Component Editors
Creating Custom Property Editors
<u>Properties and Exceptions</u>
Registering Custom Property Editors
Using Images in Property Editors
Creating Custom Component Editors
Registering Component Editors
<u>Summary</u> .
Part II: Database Programming
Chapter 6. Borland Database Component Architecture
Borland Database Component Types Overview
The Borland Database Engine
BDE Single-Tier and dbGo
BDE/SQL Links, IBExpress, dbExpress, and dbGo (Two-Tier)
DataSnap Distributed Databases (Multitier)
<u>Summary</u>
Chapter 7. Database Programming
What Are Data Modules?
Why Use a Data Module?
How to Use a Data Module in Applications, DLLs, and Distributed Objects
What Goes in a Data Module?
How to Add Properties to a Data Module?
How to Use the Data Module Designer
The Data Diagram Editor
Advanced Concepts in Data Module Usage
<u>Summary</u>
Chapter 8. The Borland Database Engine
Introduction to the Borland Database Engine (BDE)
Component Overview
<u>Summary</u>
Chapter 9. Client Datasets and Client Dataset Enhancements
Introduction to Client Dataset Concepts
Using Basic Client Datasets in the Client/Server Environment
Improving Performance with Client Datasets
Using Client Datasets in a Multitier Environment
Specialized Types of Client Datasets
<u>Summary</u>
Summary Chapter 10. Interbase Express
<u>Summary</u>

Database Rules
Generators, Triggers, and Stored Procedures
Debugging an InterBase Application
Database Creation and Connection
Using Transactions
Accessing Interbase
Setting Up Bug Tracker
Bug Tracker Wrap Up
Summary
Chapter 11. ADO Express Components for C++Builder
ADO Versus BDE
Component Overview
Database Connections
Accessing Datasets
Managing Transactions
Using Component Events
Creating Generic Database Applications
Performance Optimizations
Error Handling Issues
Multitier Applications and ADO
Summary
Chapter 12. Data Access with dbExpress
dbExpress
dbExpress Components
Migrating from Borland Database Engine (BDE)
Summary
Chapter 13. XML Document Programming and XML Mapper
XML Document Programming
XML Data Binding
XML Mapping Tool
Summary
Part III: Windows Programming
Chapter 14. Win32 API Functional Areas
Win32 API Background
Windows Management
System Services
Graphical Device Interface
Multimedia Services
Common Controls and Dialogs
Shell Features
International Features
Network Services
Summary
Chapter 15. Graphics and Multimedia Techniques
The Graphical Device Interface (GDI)
Working with Images

Working with Multimedia
<u>Summary</u>
Chapter 16. DLLs
Creating a DLL Using C++Builder
Loading a DLL
Exporting and Using DLL Classes
Packages Versus DLLs
Using Forms in a DLL
Shared Memory Support in a DLL
Using Microsoft Visual C++ DLLs with C++Builder
Using C++Builder DLLs with Microsoft Visual C++
Summary
Chapter 17. COM Programming
COM Fundamentals
Creating and Using COM Interfaces
Adding Automation
Adding Event Sinks
Writing the COM Server
ActiveX Controls
Recommended Resources
Summary
Part IV: Distributed Computing
Chapter 18. DCOM: Going Distributed
What Is DCOM?
The DCOMCnfg Utility Tool
Field Testing DCOM
Programming Security
Summary
Chapter 19. SOAP and Web Services with BizSnap
Building Web Services
Consuming Web Services
Using Other Web Services
<u>Summary</u>
Chapter 20. Distributed Applications with DataSnap
Introduction to DataSnap
DataSnap Clients and Servers
Stateless DataSnap
<u>Deployment</u>
<u>Summary</u>
Chapter 21. DataSnap Multitier Connections
Accessing the Server Remotely Using DCOM
HTTP WebConnection
TCP/IP SocketConnection
New DataSnap Connections
TSOAPConnection
<u>Summary</u>

```
TXMLDocument VCL Package Assembly
Using TXMLDocument
Summary
Index
