Introduction 1

Part I C++Builder 5 Essentials

1 Introduction to C++Builder 9

C++Builder Basics	10
Hello World! A Basic Start	10
The VCL, Forms, and Components.....	12
The Component Palette	14
Your First Real Program	17
How to Get Around	23
What's New in C++Builder 5	24
Web Programming.....	25
Distributed Applications	26
Team Development	26
Application Localization	26
Debugging	27
Database Application Development	27
Developer Productivity	27
Companion Tools CD-ROM	28
Upgrading and Compatibility Issues	28
Upgrading C++Builder from an Earlier Version.....	28
Using Existing Projects in C++Builder 5	29
Creating Projects Compatible with Previous Versions of C++Builder	29
Solving Other Project Upgrading Issues	30
Migration from Delphi	30
Comments	31
Variables	31
Constants	32
Operators	33
Controlling Program Flow.....	36
Functions and Procedures	38
Classes	40
Preprocessor Directives	42
Types of Files	43
Advantages and Disadvantages of C++Builder 5.....	44
Visual Reality: True Rapid Application Development	44
Keeping Up with the Joneses: The C++ Standard	46
Choosing the Right Development Environment	47
C++Builder Advantages and Disadvantages Conclusion	47

Preparation for Kylix	48
Similarities Between Kylix and C++Builder	48
Differences Between Kylix and C++Builder	49
Porting C++Builder Projects to Kylix.....	50
So When?.....	50
Summary	51
2 C++Builder Projects and More on the IDE 53	
Understanding C++Builder Projects.....	54
Files Used in C++Builder Projects	54
Project Manager.....	57
Using the Object Repository.....	58
Adding Items to the Object Repository.....	58
Using Items in the Object Repository	63
Sharing Items Within a Project	63
Customizing the Object Repository	64
Creating and Adding a Wizard to the Object Repository	64
Understanding and Using Packages	67
Considerations when Using Packages.....	70
The C++Builder Runtime Packages	72
Using Tdump	75
Introducing New IDE Features in C++Builder 5	76
Property Categories in the Object Inspector	76
Images in Drop-Down Lists in the Object Inspector	78
The XML Project File Format.....	80
Forms—Save as Text.....	82
The Node-Level Options	83
The New To-Do List	87
The Console Wizard	90
Summary	93
3 Programming in C++Builder 95	
Coding Style to Improve Readability	96
The Use of Short and Simple Code	97
The Use of Code Layout	98
The Use of Sensible Naming	104
The Use of Code Constructs	111
The Use of Comments	112
A Final Note on Improving the Readability of Code	117
Better Programming Practices in C++Builder	117
Use a String Class Instead of char*	117
Understand References and Use Them Where Appropriate	118
Avoid Using Global Variables	121

Understand and Use <code>const</code> in Your Code	127
Be Familiar with the Principles of Exceptions	129
Use <code>new</code> and <code>delete</code> to Manage Memory	134
Understand and Use C++-Style Casts	138
Know When to Use the Preprocessor	141
Learn About and Use the C++ Standard Library	143
Further Reading	144
Summary	146
4 Advanced Programming with C++Builder 147	
Introducing the Standard C++ Library and Templates	148
Understanding C++ Templates	148
Exploring the Standard C++ Library Features	152
Coming to Grips with Containers and Iterators	153
Using the Standard Algorithms	161
Closing Thoughts on the SCL	162
Using Smart Pointers and Strong Containers	163
The Heap Versus the Stack	163
Pointers	163
A Strong Container	168
Pitfalls	170
Smart Pointers and Strong Containers Summary	170
Implementing an Advanced Exception Handler	171
Reviewing the Strategy	171
Reviewing the Advantages	172
Replacing the Compiler's Default Exception Handler	172
Adding Project-Specific Information to the Class	174
The Exception Handler's Source Code	174
Advanced Exception Handler Summary	193
Creating Multithreaded Applications	193
Understanding Multitasking	194
Understanding Multithreading	194
Creating a Thread Using API Calls	195
Understanding the <code>TThread</code> Object	199
Understanding the Main VCL Thread	205
Establishing Priorities	208
Timing Threads	211
Synchronizing Threads	213
Introducing Design Patterns	218
Understanding the Recurring Nature of Patterns	218
Recurring Patterns in Software Design	218
Design Patterns as a Vocabulary	219
Design Pattern Format	219

Design Pattern Classification	220
Parting Thoughts About Design Patterns	222
Summary	222
5 User Interface Principles and Techniques 225	
User Interface Guidelines	226
The Example Projects Used in This Chapter	229
Introducing the MiniCalculator Project.....	230
Enhancing Usability by Providing Feedback to the User	231
Using TProgressBar and TCGauge	232
Using the Cursor	233
Using TStatusBar	234
Using Hints	243
Enhancing Usability Through Input Focus Control	264
Responding to Input	264
Moving Input Focus	270
Enhancing Usability Through Appearance	272
Using Symbols on Their Own with Buttons	274
Using Symbols in Addition to Text	275
Using Color to Provide Visual Clues	280
Using Shaped Controls	280
Enhancing Usability by Allowing Customization of the	
User Interface	283
Docking	284
Resizing	289
Using TControlBar	299
Controlling Visibility	313
Customizing the Client Area of an MDI Parent Form	317
Enhancing Usability by Remembering the User's Preferences	317
Coping with Differing Screen Conditions	328
Coping with Different Screen Resolutions	328
Coping with Different Font Sizes	328
Coping with Different Color Depths	328
Coping with Complexity in the Implementation of the	
User Interface	329
Using Action Lists	329
Sharing Event Handlers	331
Summary	334
6 Compiling and Optimizing Your Application 335	
Understanding How the Compiler Works.....	336
Speeding Up Compile Times	338
Precompiled Headers.....	338
Other Techniques for Speeding Up Compile Times	340

Exploring the C++Builder 5 Compiler and Linker Enhancements	341
Background Compilation.....	342
Miscellaneous Compiler Enhancements	343
New Linker Enhancements	343
Optimizing: An Introduction.....	344
Optimizing for Execution Speed	346
Crozzle Solver Application Example	347
Exponential Timings	349
Project Options for Execution Speed	351
Detecting Bottlenecks	352
Optimizing the Design and Algorithms.....	358
Exploring Techniques for Streamlining Code	365
Techniques for Streamlining Data.....	379
Hand-Tuning Assembly Code	381
Using External Optimization.....	384
Execution Speed Optimization Summary	385
Optimizing Other Aspects of Your Application	385
Optimizing Program Size	385
Final Optimization Aspects	386
Summary	387
7 Debugging Your Application 389	
Debugging Overview	390
Project Guidelines	391
Programming Guidelines.....	392
The Debugging Task	393
Basic Debugging Techniques	394
Outputting Debug Information	395
Using Assertions	400
Implementing a Global Exception Handler.....	402
Other Basic Debugging Issues	403
Using the C++Builder Interactive Debugger	404
Advanced Breakpoints.....	405
New Breakpoint Features in C++Builder 5.....	409
C++Builder Debugging Views	409
Watches, Evaluating, and Modifying	415
The Debug Inspector	416
CodeGuard	417
Enabling and Configuring CodeGuard	418
Using CodeGuard	419
Examining CodeGuard Errors and Their Causes	421

Advanced Debugging	426
Locating the Source of Access Violations	426
Attaching to a Running Process	428
Using Just-In-Time Debugging	428
Remote Debugging	429
Debugging DLLs	431
Looking at Other Debugging Tools	431
Testing	433
Testing Stages and Techniques	433
Testing Tips	435
Summary	436
8 Using VCL Components 437	
VCL Overview	438
It All Starts at TObject	439
Building on Existing Objects	440
Using the VCL	442
The C++ Extensions	445
The Streaming Mechanism	452
Advanced Streaming Requirements	453
Streaming Unpublished Properties	454
Common Control Updates	458
Common Control Dynamic Link Library	459
C++Builder Common Control Updates	461
Miscellaneous VCL Enhancements	464
New Help Hint and Menu Features	464
Registry Access	465
VCL Documentation Enhancements	465
New TApplicationEvents Component	466
TIcon Enhancements	466
Other Miscellaneous VCL Enhancements	466
Extending the VCL—More than Just a TStringList	466
Using TStringList as a Container	467
Storing Non-VCL Objects	467
Linking Strings to Objects of the Same Type	469
Creating a Chain of Events	479
Sorting the Lists	480
Making Improvements	481
Advanced Custom Draw Events	482
The TTreeView Component	483
The TListView Component	483
The TToolBar Component	484
Advanced Custom Draw Events Example	484

Control Panel Applet Wizard Components.....	484
The Basics of an Applet	484
Making Use of Third-Party Components	495
Third-Party Component Advantages and Disadvantages	495
Where to Look for More C++Builder Resources	496
Summary	497
9 Creating Custom Components 499	
Why Create Custom Components	500
Understanding Component Writing	501
Why Build Upon an Existing Component?.....	501
Designing Custom Components	503
Using the VCL Chart.....	504
Writing Non-Visual Components	504
Properties	504
Events	514
Methods	517
Creating Component Exceptions.....	519
The namespace	521
Responding to Messages	522
Design-time Versus Runtime	524
Linking Components	526
Linking Events Between Components	529
Writing Visual Components	532
Where to Begin	532
TCanvas	532
Using Graphics in Components	534
Responding to Mouse Messages	538
Putting It All Together.....	539
Modifying Windowed Components	547
Creating Custom Data-Aware Components	561
Making the Control Read-Only.....	561
Establishing the Link.....	562
Using the OnDataChange Event	565
Changing to a Data-Editing Control	567
Working Toward a Dataset Update	568
Adding a Final Message	571
Registering Components.....	571
Summary	574
10 Creating Property and Component Editors 577	
Creating Custom Property Editors	580
The GetAttributes() Method	593
The GetValue() Method	593

The SetValue() Method	594
The Edit() Method	595
The GetValues() Method	600
Using the TPropertyEditor Properties	600
Considerations when Choosing a Suitable Property Editor	601
Properties and Exceptions.....	602
Registering Custom Property Editors	604
Obtaining a TTypeInfo* (PTypeInfo) from an Existing Property and Class for a Non-VCL Type	606
Obtaining a TTypeInfo* (PTypeInfo) for a Non-VCL Type by Manual Creation	614
How to Obtain a TTypeInfo* for a Non-VCL Type	615
Rules for Overriding Property Editors	616
Using Images in Property Editors.....	617
The ListMeasureWidth() Method.....	622
The ListMeasureHeight() Method.....	623
The ListDrawValue() Method	624
The PropDrawValue() Method	629
The PropDrawName() Method	630
Installing Editor-Only Packages	632
Using Linked Image Lists in Property Editors.....	634
The GetAttributes() Method	640
The GetComponentImageList() Method	640
The GetValues() Method	641
The ListMeasureWidth() and ListMeasureHeight() Methods	641
The ListDrawValue() Method	643
The PropDrawValue() Method	645
Other Considerations when Rendering Images.....	647
Linking to a Parent's TCustomImageList	647
A Generalized Solution for ImageIndex Properties	652
Creating Custom Component Editors.....	658
The Edit() Method	664
The EditProperty() Method	668
The GetVerbCount() Method	670
The GetVerb() Method	670
The PrepareItem() Method	670
The ExecuteVerb() Method	677
The Copy() Method	678
Registering Component Editors	680
Using Predefined Images in Custom Property and Component Editors.....	680
Adding Resource Files to Packages	682
Using Resources in Property and Component Editors	682

Registering Property Categories in Custom Components	687
Understanding Categories and Category Creation	688
Registering a Property or Properties in a Category.....	690
Summary	698
11 More Custom Component Techniques 701	
Miscellaneous Considerations for Custom Components	702
Displaying a Class Property's Published Properties in the Object Inspector	702
Using Namespaces in Event Parameter Lists	703
Considerations when Determining an Event's Parameter List	704
Overriding DYNAMIC Functions.....	709
Handling Messages in Custom Components.....	711
Using Windows Callback Functions in Components	726
Considerations when Choosing Fundamental Property Types	736
Allowing for Designtime and Runtime Component Use	742
Frames.....	744
What Exactly Is a Frame?	744
The TCustomFrame Class	744
Working with Frames at Designtime.....	746
Working with Frames at Runtime	747
Creating a TFrame Descendant Class.....	747
Inheriting from a TFrame Descendant Class	751
Reusing Frames	752
Closing Remarks on Frames	754
Component Distribution and Related Issues	754
Packaging Components	754
Where Distributed Files Should Be Placed.....	760
Naming Packages and Package Units	762
Naming Components.....	764
Distributing only a Designtime-Only Package	764
Distributing Components for Different Versions of C++Builder	767
Creating Component Palette Bitmaps	770
Using Guidelines in the Design of Components for Distribution	771
Taking a Look at Other Distribution Issues	772
Summary	772
Part II Communications, Database, and Web Programming	
12 Communications Programming 775	
Serial Communication	776
Protocol	777

State Machines.....	780
Architecture	781
Thread Synchronization Techniques	782
Buffering	782
Concluding Remarks on Serial Communications	783
Internet Protocols—SMTP, FTP, HTTP, POP3	784
Tour of Component Tabs	784
An Example Chat Server.....	785
An Example Chat Client	790
An Example Email Application.....	793
An Example HTTP Server	802
Example FTP Client Software.....	805
Summary	811

13 Web Server Programming 813

Web Modules	814
Web Server Application Wizard	814
CGI	815
WinCGI	815
ISAPI/NSAPI.....	815
CGI or ISAPI?.....	815
WebBroker Support Components	816
TWebDispatcher.....	817
TWebModule	817
TWebResponse.....	819
TWebRequest.....	820
Web Servers	820
WebBroker Producing Components	824
TPageProducer	824
TDataSetPageProducer	828
TDataSetTableProducer	831
TQueryTableProducer	833
Web Application Wizards	837
Maintaining State	838
Fat URLs	838
Cookies	839
Hidden Fields.....	839
Web Security.....	842
Secure Sockets Layer	843
Authorization	843
Securing a Web Application	845
HTML and XML	851
XML	851

InternetExpress	853
Customer Orders	853
TMidasPageProducer	853
Deployment	855
Final Master-Detail	856
Web Page Design Issues	858
Summary	860
14 Database Programming 861	
Architecture Models for Database Applications.....	862
The Borland Database Engine.....	862
BDE Native (Single-Tier)	863
BDE/SQL Links (Client/Server)	864
Distributed (Multitier)	864
Data Access Methods	865
Native Components	866
ODBC Using the BDE	866
ODBC Using Native Components	867
ADO (ActiveX)	868
Embedded SQL	868
Native API	869
Database Architectures—Conclusion	869
Sources for More Information on Database Architectures	870
Structured Query Language (SQL).....	871
Tables and Indices	871
Parameters	872
insert, update, delete, and select	873
Aggregate Functions	875
More Information on SQL.....	875
ADO Express Components for C++Builder.....	875
ADO Versus BDE	876
Component Overview	877
Database Connections	878
Accessing Datasets	880
Accessing a Dataset with TADOTable.....	880
Using TADOCommand for Dataset Access.....	884
Managing Transactions	884
Using Component Events	884
Creating Generic Database Applications.....	886
Performance Optimizations.....	887
Error Handling Issues	888
Multitier Applications and ADO	889
ADO Express Components—Conclusion	889

Data Acquisition Architectures	889
The Basic Choices	890
Fetching Data from Many Sources	891
Data Module Designer	893
What Are Data Modules?	893
Why Use a Data Module?	893
How Do I Use a Data Module in My Applications, DLLs, and Distributed Objects?.....	895
What Goes in a Data Module?	896
How Can I Add Properties to My Data Module?	897
How to Use the Data Module Designer	897
Advanced Concepts	900
Form Inheritance with Data Modules	900
Handling Uneven Form Inheritance with Data Modules	901
How to Avoid Dependence on Specific User Interfaces	902
How to Work with Application-Specific and Framework Components in Data Modules	903
Data Modules in Packages	905
Data Module Designer—Conclusions.....	905
InterBase Express	905
Bug Tracker Database Schema	906
Database Rules	909
Generators, Triggers, and Stored Procedures	909
Bug Tracker Implementation.....	911
Bug Tracker Wrap Up	920
Summary	921

Part III Interfaces and Distributed Computing

15 DLLs and Plug-Ins 925

Using the DLL Wizard	926
Writing and Using DLLs	927
Linking DLLs Statically	928
Importing Functions from a Dynamically Linked DLL	931
Exporting Classes	936
Using Packages Versus DLLs	939
Using SDI Forms in a DLL	942
Using MDI Child Forms in DLLs and Packages	943
Using MDI Child Forms in DLLs	943
Using MDI Child Forms in Packages	948
Using Microsoft Visual C++ DLLs with C++Builder	951
Using C++Builder DLLs with Microsoft Visual C++	952
Writing Plug-Ins	953

Anatomy of a Plug-In	954
TIBCB5PlugInBase Class	959
TBCB5PluginManager	963
Wrapping Up Plug-Ins.....	965
Summary	965
16 COM Programming 967	
Understanding COM Servers and Clients	968
Outgoing Interfaces and Event Sinks Revisited	969
Writing the COM Server	970
Choosing the Server Type	971
Choosing a Threading Model	972
Creating the Server	973
Adding a COM Object	974
Dissecting the Generated Code	978
Writing Method Bodies	983
Adding Better Error Support	985
Implementing a Method That Fires an Event	988
Implementing a Custom Interface	989
Firing Custom Events	993
Writing the Proxy/Stub DLL	999
Writing the COM Client.....	1006
Importing the Type Library	1007
Looking at the Generated C++ Constructions.....	1008
Creating and Using the COM Server Object	1011
Catching Dispinterface-Based Events	1013
Querying for the Custom Interface	1016
Writing the Custom Interface-Based Event Sink	1017
Recommended Readings.....	1021
Summary	1022
17 Going Distributed: DCOM 1023	
What Is DCOM?	1024
Windows OS Family and DCOM	1025
The DCOMCnfg Utility Tool	1025
Global Security Settings	1026
Per-Server Security Settings	1028
Field Testing DCOM	1031
Creating the Server Application	1031
Creating the Client Application.....	1033
Configuring Launch and Access Permissions	1036
Configuring Identity	1037
Running the Example	1037

Programming Security	1038
CoInitializeSecurity Function Parameters	1038
Using CoInitializeSecurity	1040
Understanding DLL Clients and Security	1042
Implementing Programmatic Access Control	1042
Implementing Interface-Wide Security	1044
Using the Blanket	1046
Summary	1054
18 One Step Ahead: COM+ 1057	
Introducing COM+	1058
COM+ Applications	1058
The COM+ Catalog	1059
Using COM+ Services	1060
Loosely Coupled Events	1060
Transactions	1062
Synchronization	1065
Security	1066
Queued Components	1066
Load Balancing	1066
Developing and Using COM+ Events	1067
Creating the COM+ Event Object	1067
Installing the Event in a COM+ Application	1069
Creating the Publisher	1073
Creating Subscribers	1074
Configuring Subscribers	1078
Creating a Persistent Subscription	1080
Creating a Transient Subscription	1083
Developing and Using COM+ Transactional Objects	1093
Creating the Transactional Objects for the Business Layer	1095
Developing Compensated Resource Managers	1105
Creating the Client	1118
Summary	1119
19 Multi-Tier Distributed Applications with MIDAS 3 1121	
Introduction to MIDAS	1122
MIDAS Clients and Servers	1125
Creating a Simple MIDAS Server	1125
Examining MIDAS Server Registration	1129
Creating a MIDAS Client	1130
Using the Briefcase Model	1134
Using ApplyUpdates	1138
Implementing Error Handling	1138

Demonstrating Reconcile Errors	1142
Accessing the Server Remotely	1143
Creating a MIDAS Master-Detail Server	1144
Exporting Master-Detail DataSets	1147
Creating a MIDAS Master-Detail Client	1148
Using Nested Tables	1149
Understanding MIDAS Bandwidth Bottlenecks	1152
MIDAS 3 Enhancements	1154
TDataSetProvider	1154
IProvider Versus IAppServer	1155
Stateless Data Broker	1155
InternetExpress Applications	1161
WebConnection Component	1163
Object Pooling	1164
Socket Server	1166
Object Broker	1169
Deployment	1170
Summary	1171
20 Distributed Applications with CORBA 1173	
Introduction to CORBA	1174
How CORBA Works	1175
Static and Dynamic	1175
Always or On-Demand	1175
Flat or Hierarchical	1176
Who Is the Server and Who Is the Client	1176
The Object Request Broker	1176
The Basic Object Adapter	1177
The Portable Object Adapter	1177
CORBA Versus COM	1177
Visibroker Components	1177
The Smart Agent	1178
The Object Activation Daemon	1178
The Console	1178
The Interface Definition Language	1178
The interface Keyword	1179
The attribute Keyword	1180
Methods	1180
Type Definitions	1180
Exceptions	1180
Inheritance	1181
Modules	1181

What's New in C++Builder 5	1182
C++Builder Support for CORBA	1183
Environment Options.....	1183
Debugger Options	1184
Project Options	1184
The CORBA Server Wizard	1185
The CORBA Client Wizard.....	1186
CORBA IDL File Wizard	1186
CORBA Object Implementation Wizard.....	1187
The Project Updates Dialog	1188
The Use CORBA Object Wizard.....	1189
Differences Between C++Builder 4 and C++Builder 5	1190
Implementation Models	1191
Inheritance	1192
Virtual Implementation Inheritance.....	1192
Delegation Model (Tie)	1192
Poor Man's CORBA	1193
Summary	1193

21 Microsoft Office Integration 1195

Overview of Integration with Microsoft Office	1196
How to Integrate	1197
Using TOleContainer	1197
Using Automation	1199
Using Variants and Automation Objects	1201
Guarding Against Macro Viruses with Automation	1203
Using Word Basic	1203
Integrating with Word	1204
Collections.....	1204
The Application Object	1204
Working with Documents	1205
Getting Text from Word.....	1209
Putting Objects into Word Documents	1212
Integrating with Excel.....	1216
Obtaining the Application Object	1216
Working with Workbooks	1216
Putting Cells into Excel Worksheets	1219
Getting Cells from Excel.....	1221
Using C++Builder 5's Server Components	1221
The WordApplication and WordDocument Components	1223
Vocabulary Revisited.....	1223
Final Thoughts About ATL and OleServers	1228
Going Further	1228

Word	1229
Excel	1229
Other Office Applications	1230
Summary	1232

22 Using ActiveX Techniques 1233

Understanding Active Server Objects	1234
A Step-by-Step Example: Creating Response and Request Objects Via the Active Server Object Wizard	1235
ASP Session, Server, and Application Objects	1243
ASP Objects and WebBroker Support.....	1243
Redeployment of Active Server Objects	1244
Debugging Active Server Objects	1245
Introducing ActiveForms	1246
Building an ActiveForm	1246
Deploying an ActiveForm for Use in Internet Explorer	1249
Setting Options for an ActiveForm	1249
Connecting to an ActiveForm	1252
Creating a Data-Aware ActiveForm	1254
Working with CAB Files and Packages	1257
ActiveForm Updates	1258
OCCACHE and Downloaded Program Files.....	1258
Creating ActiveForms as MIDAS Clients	1259
Using an ActiveForm in Delphi	1261
Creating Component Templates with ActiveForms	1263
Shell Programming	1264
Shell Basics	1264
Retrieving a Folder's Contents	1267
Transferring Shell Objects.....	1269
Summary	1275

Part IV Advanced Topics

23 Data Presentation with C++Builder 1279

Presenting Data in Reports	1280
Understanding the Value of a Report	1280
Using QuickReport to Produce Reports	1281
Understanding the Philosophy of the Custom Viewer	1281
QuickReport Custom Viewer Summary	1292
Printing Text and Graphics	1292
Printing Text	1292
Printing Graphics.....	1303

Using Advanced Printing Techniques	1308
Determining Printer Resolution.....	1308
Determining the Printable Paper Size	1308
Determining the Physical Sizes.....	1309
Determining Printer Drawing Capabilities	1310
How to Print with a Rotated Font	1311
Getting Access to Printer Settings and Setup	1312
How to Get the Default Printer Name.....	1313
How to Set the Default Printer	1314
Resetting TPrinter	1318
General Information About Accessing DEVMODE	
Using TPrinter.....	1318
Using PRINTER_INFO_2	1319
Other Paper-Related Functions	1325
Working with Jobs.....	1334
How to Catch the Pressing of the Print Screen Button.....	1336
Printing a Form	1338
Creating a Print Preview	1338
Using Printer-Related Conversion Routines	1339
Other Printer-Related Information	1341
Creating Charts with the TChart Component.....	1342
Getting Started with TeeChart.....	1342
Altering Chart Appearance at Runtime.....	1344
Interacting with Charts	1345
Creating Charts Dynamically	1347
Printing Charts.....	1348
Upgrading to TeeChart Pro	1349
Summary	1350

24 Using the Win32 API 1351

Win32 API Versus Win32 Middleware	1352
Brief History of Windows and the API.....	1353
Win32 API Functional Areas	1356
Windows Management	1358
System Services.....	1360
Graphical Device Interface	1363
Multimedia Services	1364
Common Controls and Dialogs	1366
Shell Features	1369
International Features	1370
Network Services.....	1371

Anatomy and Operation of a Windows Program	1372
WinMain()	1372
Window Handles	1374
Windows Messages	1374
Real-World Examples Using the API	1377
Launching an Application Within a Program	1378
Fundamental File I/O.....	1382
Using the Magic of Shell.....	1393
Implementing Multimedia Services	1406
Using Globally Unique Identifiers (GUIDs).....	1410
Determining System Information	1411
Flashing a Notification	1423
Adding System Support.....	1427
Animating Effects	1429
Shaping Your Applications	1432
Writing Control Panel Applets the Old-Fashioned Way	1442
Summary	1455
25 Multimedia Techniques 1457	
The Graphical Device Interface (GDI)	1458
The Windows API and the Device Context.....	1459
Understanding TCanvas: The C++Builder Interface	1459
Customizing a Drawing	1462
An Analogue Clock Example	1464
Image Support.....	1465
The Windows Bitmap Object	1466
The TBitmap Class	1466
JPEG Images	1467
GIF Images	1468
PNG Images.....	1469
Image Processing	1472
Displaying and Obtaining Image Information	1473
Accessing Individual Pixel Values Using TCanvas->Pixels.....	1474
Image Generation	1475
Fast Access to Pixel Value Using ScanLine	1477
Point Operations: Thresholding and Color/Grayscale	
Inversion	1478
Global Operation: Histogram Equalization.....	1480
Geometrical Transformation: Zoom	1483
Spatial Operation: Smoothing and Edge Detection	1487

Audio Files, Video Files, and CD Music	1489
The Media Control Interface	1489
The Waveform Audio Interface	1496
Concluding Remarks on the Waveform Audio Interface	1504
Summary	1504
26 Advanced Graphics with DirectX and OpenGL 1505	
Introduction to OpenGL	1506
OpenGL Versus Direct3D	1507
The OpenGL Command Structure	1507
Drawing Loops in C++Builder Using <code>OnIdle()</code>	1507
Using OpenGL	1508
Stage 1: OpenGL Initialization	1508
Stage 2: Setting Up a Rendering Environment with Lighting and Shading	1515
Stage 3: 3D Transformations	1518
Stage 4: Drawing Primitives	1520
Stage 5: Flipping Surfaces	1530
An Example OpenGL Program	1530
OpenGL Conclusion	1531
OpenGL References	1531
Introduction to DirectX	1532
COM Basis of the DirectX API	1532
Non-Object DirectX Functions	1533
Using DirectDraw	1533
Initialization of a DirectDraw Object	1533
Adjusting Display Settings for DirectDraw	1535
Drawing Surfaces	1537
Using the GDI on DirectDraw Surfaces	1539
Loading Bitmaps into a Surface	1541
A DirectDraw Example Program	1547
DirectDraw Conclusion	1547
Using DirectSound	1547
Initializing a DirectSound Object	1548
Creating a Secondary Buffer	1549
A DirectSound Example Program—A Multiple Sound Player ..	1556
Taking DirectX Further	1556
DirectX References	1557
Summary	1557

Part V C++Builder Application Deployment**27 Creating Help Files and Documentation 1561**

Technical Writing 101—Ten Quick Steps to Better Writing	1562
Types of Documentation	1563
Strategies for Online Documentation	1564
Approaches to Help	1565
Help Formats	1568
WinHelp Format Help Files: The Windows Standard	1570
Help-Authoring Tools	1571
Context-Sensitive Help	1572
The MS Help Workshop	1573
Adding What's This? Help to C++Builder	1579
Expanding Your Help Project Using Advanced Features	1580
Microsoft HTML Help Files	1581
Help Properties and Methods in the VCL	1583
Help Properties	1583
Help Methods	1583
Events	1587
Resources for the Help Author	1587
Books	1587
Help-Authoring Tools Available on the Internet	1588
Summary	1592

28 Software Distribution 1593

Language Internationalization and Localization	1594
Overview of Language Internationalization	1594
The Localize Application	1595
Things to Remember	1601
Resource DLL Wizard	1602
How Does It Work?	1602
How to Create a Resource DLL	1602
How to Test It	1605
Other Files and Programs to Ship	1606
Your Application Files	1606
Distribution Steps	1609
Copyrighting and Software Licensing	1609
Copyrighting	1609
Software Licensing	1611
Software Protection	1611
Protecting Your Application	1612
Protecting Your Application with Third-Party Components	1612

Protecting Your Application with Other Types of Components	1614
Some Final Thoughts on Software Protection	1615
Shareware	1615
Shareware and How to Protect It.....	1616
Implementing Shareware Protection Methods	1618
Shareware Methods in a Nutshell	1618
Distribution and Marketing Via the Internet.....	1618
Web Sites	1619
Customer Support	1619
Advertising	1619
Free Banner Ads	1620
Accepting Credit Cards and Providing Unlock Codes	1621
Internet Marketing Hints and Tips	1622

29 Software Installation and Updates 1625

Install and Uninstall	1626
Installation Program Creators	1626
Install Maker	1627
Uninstalling	1630
CAB and INF Files.....	1632
About CAB Files	1632
About INF Files.....	1635
About Internet Packages	1640
Versions, Updates, and Patches	1643
Versions	1643
Updates for Application Improvements	1644
Patches	1646
Patch Maker.....	1647
Some Tips on Updates and Patches.....	1649
Version Control and TeamSource	1649
Who Should Use TeamSource?.....	1650
Why Should TeamSource Be Used?	1650
When Should TeamSource Be Used?	1651
Where Can TeamSource Be Used?	1651
How Is TeamSource Used?	1651
TeamSource Windows	1657
Version Controllers	1660
Bookmarks.....	1661
Locks	1661

Using InstallShield Express	1662
Installing InstallShield.....	1663
Getting Started in InstallShield	1663
Testing	1671
Summary	1671

Part VI Knowledge Base

30 Tips, Tricks, and How Tos 1675

Making the Enter Key Simulate the Tab Key	1676
The Solution	1676
Explanation of the Code	1677
Some Pitfalls	1681
Tab Key Simulation Wrap Up	1681
Determining the OS Version	1682
The Solution	1682
The Code	1683
Determining the OS Version Wrap Up	1684
Programming Using Floating-Point Numbers	1684
Background	1685
Working with Numbers	1686
Performing Addition and Subtraction	1687
Performing Formulaic Chains of Arithmetic.....	1691
Comparing Data.....	1691
Floating-Point Numbers—Closing Remark	1692
Implementing Splash Screens.....	1692
The WinMain() Function	1692
Creating a Splash Screen.....	1694
Preventing More than One Instance of an Application	
from Running	1696
The Solution	1696
The Code	1697
Conclusion.....	1702
Working with Drag-and-Drop.....	1702
The Solution	1702
The Code	1702
How Does It Work?	1705
Wrapping Up Drag-and-Drop	1707
Capturing the Screen.....	1707
How Windows Handles Windows	1707
The Solution	1708
Capturing Screens Wrap Up	1712

Implementing a TJoyStick Component	1713
Creating a Windows System Monitor-Like Application	1726
A Look at Windows System Resources	1726
The Solution	1728
System Monitor Wrap Up	1735
Examining a Soundex Application	1735
The Solution	1736
Using Tree View Components	1743
Tree View Basics	1744
Adding Nodes	1744
Using Glyphs	1747
Navigating Tree Views	1749
Accessing Nodes	1750
Finding Nodes	1751
Displaying Node Counts	1752
Moving Nodes Up and Down	1754
Implementing Drag-and-Drop	1755
Modifying a Node	1757
Deleting a Node.....	1759
Supporting Undo and Redo Deletion	1760
Save a Tree (For the Morning After).....	1763
TTree Wrap Up	1763
Implementing an Icon Extraction Utility	1764
Creating a Windows Explorer-Like Application	1773
Investigating Windows Shell Functions and Interfaces.....	1773
The Solution	1774
Windows Explorer Wrap Up	1781
Working with NT Services	1781
The SendMsg Program	1781
The Stickums Service	1784
The Stickem Client Program	1788
Windows Services Wrap Up	1789
Using Cryptography	1789
The Solution	1790
File Encoding.....	1793
File Decryption	1799
Creating a World Daylight Clock	1801
Special Supplement for Non-Believers	1807
Summary	1808

31 A Real-World Example 1809

Examining a World Wave Statistics Program	1810
Examining the Source Code	1811
Header File math.h	1812
Header File mapunit.h	1812
Header File wavedata.h	1813
Source Code File about.cpp	1813
Examining the Code for TMainUnit	1814
Making Some Improvements	1819
Summary	1821
