

Table of Contents

Table of Contents	2
What's in a Management System?	3
Building a Repository	3
Essential and recommended repository functions	4
The content model	6
Storing Content	7
Relational database repositories	8
Relational database basics	8
Storing component classes and instances	9
Fully parsing structured text	11
Partially parsing structured text	12
Not parsing structured text	13
Breaking the spell of rows and columns	14
Storing access structures	16
Hierarchies in a relational database	16
Indexes in relational databases	18
Cross-references in relational databases	19
Sequences in relational databases	21
Storing the content model	21
XML-based repositories	23
Object databases vs. XML	24
Storing component classes and instances	24
Storing access structures	27
Hierarchies in XML	27
Indexes in XML	29
Cross-references in XML	29
Sequences in XML	30
Storing the content model	31
File-based repositories	33
Implementing Localization Strategies	34
Doing Management Physical Design	36
A repository-wide DTD	36
Link checking	36
Media checking	37
