Introduction xix

Part One Network Performance Primer 1

Chapter 1 Defining Network Performance 3

The Elements of Network Performance 4
- Availability 4
  - Using Availability Statistics 5
  - Using Large Ping Packets 7
- Response Time 8
  - Response-Time Factors 9
  - Determining Response Time from Ping Packets 9
  - Using traceroute for Redundant Paths 10
- Network Utilization 11
- Network Throughput 12
- Bandwidth Capacity 14

Methods of Collecting Performance Data 15
- Querying Network Devices 16
  - How Tools Query Devices 16
  - Values to Query 17
- Watching Existing Traffic 18
- Generating Test Traffic 19

Summary 20

Chapter 2 Watching Network Traffic 21

Catching All the Traffic 21
- The libpcap Library 22
  - Downloading and Installing libpcap 22
  - Using libpcap 23

The winpcap Library 24
Downloading and Installing winpcap 24
Developing Applications with winpcap 25
Using winpcap 25
The tcpdump Program 25
Installing tcpdump 26
Linux RPM Installation 26
Downloading the Source Code 27
Using tcpdump 27
The WinDump Program 31
Downloading and Installing WinDump 31
Using WinDump 31
Filtering Packets with tcpdump and WinDump 33
The Analyzer Program 35
The Ethereal Program 37
Downloading and Installing Ethereal 38
Using Ethereal 38
Summary 40

Chapter 3 Network Device Utilization 41
The net-snmp Package 41
Downloading and Installing net-snmp 42
Using net-snmp Utilities 44
snmpget 45
snmpgetnext 46
snmpwalk 47
snmpdelta 48
Standard Network Performance MIBs 49
Data Rates 49
Error Rates 51
Using Vendor MIBs 52
The CISCO CPU MIB 53
Using the Cisco CPU MIB 55
Summary 57

Part Two Network Performance Tools 59

Chapter 4 netperf 61
What Is netperf? 61
TCP Network Performance 62
UDP Network Performance 62
Downloading and Installing netperf 63
Downloading netperf 63
Installing the netperf Package 63
Running netserver 65
Using netserver in Standalone Mode 66
Autostarting netserver 67
netperf Command-Line Options 68

Measuring Bulk Network Traffic 70
TCP_STREAM 70
UDP_STREAM 71
Measuring Request/Response Times 72
TCP_RR 73
TCP_CRR 75
UDP_RR 75
Using netperf Scripts 76
Summary 77

Chapter 5 dbs 79
dbs Features 79
The Components of dbs 80
The dbs Output 80
Before Installing dbs 81
The ntp Program 81
The gnuplot Program 82
Downloading and Installing dbs 82
Running the dbsd Program 84
Configuring Command Files 86
Sender and Receiver Commands 87
The Pattern Command 88
Sample Sender and Receiver Sections 89
Test Commands 90
Performing Tests 90
Define the Test Environment 91
Create the Command File 91
Run the Test 93
Analyze the Data 94
Summary 97

Chapter 6 Iperf 99
Iperf Features 99
The Components of Iperf 100
The Iperf Program 100
The jperf Front End 100
The Iperf library 101
Iperf Tests 101
Iperf Output 102
Downloading and Installing Iperf 103
Downloading the Source Code 104
Compiling the Source Code 104
Installing iperf 104
Using Iperf 105
Starting the Iperf Server 105
Standalone Mode 105
Daemon mode 106

Performing Simple Tests 106
Testing TOS Traffic 108
Testing UDP Traffic 109
Testing Multicast Traffic 111
Testing a File Transfer 112
Testing TCP Window Sizes 113
Using jperf 114
Summary 115

Chapter 7 Pathrate 117
Using Statistics to Measure Bandwidth 118
How Pathrate Works 118
Initial Phase 118
Phase I 118
Phase II 119
How Pathload Works 119
Using Pathrate 120
The Pathrate Programs 120
Downloading Pathrate 121
Compiling Pathrate 121
Starting the Pathrate Server 122
Starting the Pathrate Client 122
Pathrate Test Output 123
Quick Termination Mode 123
Full Testing Mode 124
Initial Phase Results 125
Phase I Results 125
Phase II Results 126
Using Pathload 127
Pathload 127
Downloading and Configuring Pathload 127
Starting the Pathload Server 128
Starting the Pathload Client 128
Pathload Output 129
Requested Fleet Parameters 129
Loss Rate per Stream 130
Server Fleet Parameters 130
Context Switches 131
Packet Discards 131
Relative One-Way Packet Delay Trend 131
Fleet Aggregate Trend 132
State Variable Updated 133
Final Test Results 133
Summary 134

TEAMFLY

Team-Fly®

Chapter 8 Nettest **137**
What Is Nettest? 137
The lblnettest Application 138
Certificates and Keys 139
The ACLFile File 139
Test Applications 139
The OpenSSL Package 140
Downloading and Installing Nettest 142
Downloading Nettest 142
Before Compiling 143
Define All Test Hosts 143
Modify the Source Code 144
Compiling and Installing Nettest 145
Creating Certificates and Keys 146
Creating a Certificate Authority 147
Creating the Client Certificate and Key 148
Creating the Server Certificate and Key 149
Creating the ACLFile File 149
Using Nettest 150
Starting a Nettest Session 151
Performing Tests 152
Summary 154

Chapter 9 NetLogger **155**
What Is NetLogger? 156
NetLogger APIs 156
NetLogger Host and Network Monitoring Tools 156
NetLogger Log File 157
NetLogger Graphical Tool 158
Downloading and Installing NetLogger 158
Source Code Distribution File 158
Binary Distribution File 160
Using the APIs 160
Functions 160
Open 160
Write 162
Close 163
Libraries 164
Using nlv 165
Types of nlv graphs 165
Configuring nlv 167
The bltGraph.pro File 167
The nlv-main.cfg File 167
The nlv-keys.cfg File 169
Summary 173

Chapter 10 tcptrace 175
What Is tcptrace? 175
Console Mode 176
Graphical Mode 177
Downloading and Installing tcptrace 178
Using tcptrace in Console Mode 179
Using Basic Command-Line Options 179
Standard Session Output 179
tcptrace Filters 183
Using Module Options 185
Graphical Programs 187
xplot 187
jPlot 188
Using tcptrace in Graphical Mode 189
Standard Graphs 189
Throughput Graph 189
Time Sequence Graph 191
Traffic Module Graphs 193
Summary 194

Chapter 11 ntop 197
What Is ntop? 198
Traffic Measuring 198
Data Received 198
Data Sent 199
Network Throughput 199
Traffic Monitoring 200
Statistics 200
IP Traffic 201
IP Protocols 201
Before Installing ntop 202
Creating the ntop User ID 203
Loading Support Software 203
Downloading and Installing ntop 204
Compiling and Installing gdchart 205
Compiling ntop 206
Running ntop 206
Starting ntop for the First Time 207
ntop Command-Line Parameters 208
Using ntop Command-Line Parameters 209
Monitoring Network Traffic 209
Analyzing a tcpdump Dump File 210
ntop Access Log File 211
Viewing ntop Data 211
Connecting to ntop 211
Watching Hosts 212
Watching Network Traffic 214
Summary 215

Chapter 12 Comparing Network Performance Tools 217
Tools for Testing the Network 218
Bulk Data Transfers 218
Using Pathrate to Find the Network Bottleneck 219
Using netperf to See Actual Network Bandwidth 221
Using ntop to Analyze Network Traffic 223
Using NetLogger to Analyze Host Functions 225
Request/Response Traffic 225
Using netperf to Simulate HTTP Traffic 227
Using tcptrace to Watch HTTP Sessions 228
Analyzing Production Traffic 229
Analyzing an FTP Session 230
Using tcptrace 230
Using ntop 233
Analyzing a Telnet Session 234
Using tcptrace 235
Using ntop 237
Summary 237

Part Three Application Performance Tools 239

Chapter 13 Measuring Application Performance 241
Methods of Testing Network Applications 242
The Test Network 242
Production Network 243
Network Emulation 243
Network Traffic Generator 244
Network Emulation Device 244
Network Simulation 245
Discrete Event 246
Analytical 246
Modeling Network Problems 246
Bandwidth Constraints 247
Packet Errors 248
Lost Packets 248
Out-of-Order Packets 249
Delayed Packets 250
Modeling Network Devices 251
Hubs 251
Switches 252
Routers 253
Quality of Service 254
Weighted Fair Queuing 254
Stochastic Fair Queuing 254
Random Early Detection 255
Firewalls 255

Wide Area Networks 256
Modeling Point-to-Point Networks 256
Modeling Packet-Switching Networks 257
Wireless Networks 257
Summary 258

Chapter 14 dummynet 259
What Is dummynet? 260
Dummynet Features 260
Using the dummynet Host 261
The ipfw Application 263
Creating New Rules 264
Rule Number 264
Rule Probability 265
Rule Action 265
Rule Logging 266
Rule Definition 266
Listing Rules 266
Removing Rules 267
dummynet Rules 268
dummynet Commands 268
Bandwidth 269
Delay 269
Random Packet Loss 270
Queue Size 270
Configuring WFQ 271
Configuring Multipath Links 271
Installing dummynet 271
Kernel Options 272
Building a New Kernel 273
Installing PicoBSD 273
Controlling dummynet 274
Testing dummynet 275
Setting Network Delays 275
Setting Network Bandwidths 277
Summary 277

Chapter 15 NIST Net 279
What Is NIST Net? 279
NIST Net Emulations 280
Bandwidth Limitation 280
Packet Delay 281
Packet Reordering 281
Packet Loss 281
Packet Duplication 282
Packet Diversion 282
The NIST Net Kernel Module 282

The NIST Net Configuration Tools 285
The NIST Net Optional Tools 286
mungebox 287
nistspy 287
Downloading and Installing NIST Net 288
Downloading NIST Net 288
Compiling NIST Net 288
Getting the Required Files 289
Compiling the Source Code 290
Loading NIST Net 291
Using NIST Net 292
Using cnistnet 292
Using xnistnet 295
Creating Rules 296
Modifying Rules 297
Summary 298

Chapter 16 Network Traffic Generator 301
What Is Network Traffic Generator? 301
How Network Traffic Generator Works 302
The Core Modules 302
The Protocol Modules 303
The Payload Modules 303
The Response Modules 304
The Network Traffic Generator Programs 304
Command-Line Interface 304
X Windows Interface 305
Generating Network Traffic 306
Bulk Data Transfers 306
Client/Server Transactions 307
Connectionless Communication 308
Downloading and Installing the Package 308
Downloading 308
Before Compiling 309
fastdep 309
Kylix Libraries 310
Compiling and Installing 311
Using Network Traffic Generator 312
Command-Line Options 312
Server 312
Client 313
Setting Up a Test 315
Test Host Placement 316
Test Host Configuration 316
Watching the Test Traffic 317
Summary 320

Chapter 17 ns 321
What Is ns? 321
Network Simulator Programs 322
ns 322
nam 323
xgraph 324
Network Model Elements 324
Network Nodes 324
Network Links 325
Network Agents 326
Network Applications 327
ns Modeling Language 329
Downloading and Installing ns 330
Downloading 331
Compiling and Installing 332
Validating the Installation 332
Performing a Network Simulation 332
Creating the Simulation Model 333
Running the Simulation 336
Using nam 338
Using xgraph 339
Summary 340

Chapter 18 SSFNet 343
What Is SSF? 344
Entities 344
Processes 344
Events 345
In Channels 345
Out Channels 345
What Is SSFNet? 345
Libraries 345
Domain Modeling Language (DML) 346
Networks 347
Hosts 349
Links 350
Routers 351
Protocols 352
Downloading and Installing SSFNet 353
Downloading 354
Installing 354
Creating a Development Environment 355
Using SSFNet 356
Creating a Model 356
Running the Simulation 360
Interpreting the Results 362
Summary 364

Chapter 19 Comparing Application Performance Tools **365**
Modeling the Production Environment 365
The Production Network 366
Modeling the Network 367
Using ns 368
Building the Model 368
Running the Model 371
Interpreting the Results 372
Using SSFNet 374
Building the Model 374
Running the Model 377
Interpreting the Results 379
Using dummynet 379
Building the Emulation Environment 379
Running the Emulation 380
Using NIST Net 381
Building the Emulation Environment 381
Running the Emulation 383
Final Results 383
Summary 384

Appendix Resources **387**

Index **391**
