Introduction xxxi

Part I: SUSE Linux Basics 1

Chapter 1: Installing SUSE 9.1 3

Selecting Your Installation Method 3
Starting Your Installation 4
Selecting boot options 6
Configuring language settings 8
Selecting and Customizing Installation 9
Partitioning your disks 11
Resizing existing operating system partitions 13
Primary and extended partitions 14
Defining filesystems 14
Selecting software for installation 19
Selecting a boot loader 22
Changing the default runlevel 24
Running the Installation 25
Configuring your root password 26
Configuring your network access 27
Testing your connection and online updates 31
Configuring your modem 32
ISDN and ADSL connections 33
Adding a new user 34
SuSEconfig 35
Reviewing the release notes 36
Configuring your hardware 36
Completing Installation 42

Chapter 2: Linux Fundamentals 45

Command Line 101: The Shell 45
Commonly used shell features 46
Advanced shell features 47
Getting Help for Linux Commands 52
Working with Files and Directories 52
Listing files 52
Copying files 53
Moving and renaming files 53

Deleting files and directories . . . 53
Changing directories . . . 54
Making directories . . . 54
Making links to files or directories . . . 54
Concatenating files . . . 55
Viewing files with more and less . . . 55
Viewing the start or end of files . . . 55
Searching files with grep . . . 56
Finding files with find and locate . . . 56
Editing text with vi and emacs . . . 57
Common Administrative Tasks . . . 57
Basic user and group concepts . . . 57
Creating users and groups . . . 58
Working with file ownership and permissions . . . 59
Configuring user preferences . . . 62
Mounting and unmounting filesystems . . . 63
Working with Software Packages . . . 63
Checking what's installed . . . 63
Examining RPM packages . . . 64
Extracting files from packages . . . 65
Compiling source packages . . . 66
Working with source RPMs . . . 66
Connecting over the Network . . . 66
Backing Up, Restoring, and Archiving Files . . . 67
Creating and reading simple archives . . . 67
Creating an ISO image to burn to CD . . . 68

Chapter 3: Partitions, Filesystems, and Files . . . 69

Partitions . . . 69
Types of partitions . . . 70
Creating partitions . . . 71
Updating a disk's partition table . . . 76
Changing partition types . . . 76
Filesystems . . . 77
EXT2 . . . 78
EXT3 . . . 78
ReiserFS . . . 79
JFS . . . 79
XFS . . . 80
VFAT/NTFS . . . 80
Creating Filesystems . . . 80
Creating an EXT2 filesystem . . . 81
Creating an EXT3 filesystem . . . 82
Upgrading an EXT2 filesystem to an EXT3 filesystem . . . 83
Creating a ReiserFS filesystem . . . 84
Filesystem Benchmarks . . . 85
Mounting Filesystems . . . 87
Mount options . . . 88
Automatically mounting filesystems . . . 91
Unmounting Filesystems . . . 92

Part II: The SUSE System 95

Chapter 4: Booting the System 97

Booting Concepts 97
Runlevels 100
Switching runlevels manually 101
Using chkconfig to control runlevels 103
Customizing runlevels for different types of systems 104
Boot Managers 105
LILO 105
GRUB 107
Dual Booting 109
Installing Windows and Linux on a new system 109
Installing Linux on an existing Windows system 109
Manually partitioning an existing Windows system 110
Sharing data on Windows and Linux partitions 112
Troubleshooting Booting 113
Fixing boot problems using runlevels 113
The SUSE Rescue System 115

Chapter 5: Documentation 117

Finding Help on Your SUSE System 117
The SUSE manuals 117
Man pages 118
Info pages 122
The SUSE Help Center 123
/usr/share/doc/packages/ 124
Other documentation packages 124
Linux Documentation Project Resources 125
FAQs 125
HOWTOs 126
Linux Documentation Project Guides 126
The SUSE package books 127
Finding Help Online 128
The SUSE Portal 128
SUSE public mailing lists 129
The unofficial SUSE FAQ 129
Other SUSE documents 130
SUSE Linux OpenExchange Server web sites 130
Topic-specific sites 130
Finding software 131
IBM 132
Other distributions 132
News sites 132
IRC 132
Finding Further Information 132

Chapter 6: Understanding Your Linux Network 135

Internet 101 136
TCP/IP 136
The ISO OSI model 137
The DoD model 140
IP addresses 141
Routing. 146
And Breathe 147

Chapter 7: Logging 149

Why Log? 149
The Files in /var/log 149
Logging with syslog 151
Logging with syslog-ng. 153
The log source. 154
The filter 155
The log destination 156
The log definition — tying it all together 156
Future Directions for Linux Logging 157
Managing Your Logs with logrotate 157
Analyzing Your Logs with logcheck 159
Using Webalizer. 161
Reading Log Files 162

Chapter 8: The X Window System 165

X Window System Concepts 166
Window managers 166
KDE and GNOME 167
Configuring X 168
Getting hardware information 168
Using sax2 168
Framebuffer graphics. 170
Accessing framebuffer graphics after installation 172
If X still doesn't start 172
Switching resolutions. 172
Copy and paste in X. 172
User preferences in X. 173
Using X remotely 174
Diskless X terminals 177
KDE. 178
Konqueror 179
The KDE Control Center 180
KDE applications 181
GNOME 182
Nautilus 184
Epiphany 184
Evolution 184
Gnucash 184
AbiWord 184
Gnumeric. 184

Other Window Managers . . . 185
MWM and FVWM2 . . . 185
Blackbox . . . 186
IceWM . . . 186
XFCE . . . 187
Window Maker . . . 187
FVWM . . . 187

Chapter 9: Configuring the System with YaST . . . 189

YaST Modules . . . 191
Configuring Installation Sources . . . 194
Creating and Using Boot and Rescue Floppies . . . 196
Setting Up Proxy Settings . . . 197
Using NTP Time Services . . . 197
Printer Configuration . . . 198
Setting Up a Scanner . . . 204
Boot Loader Configuration . . . 205
Setting Up SCPM . . . 208
Runlevel Editor . . . 211
Configuring DHCP . . . 213
Users and Groups . . . 213
Adding or editing users . . . 213
Adding or editing groups . . . 216
YOU — the YaST Online Update . . . 218
YOU on SUSE Professional and on SLES . . . 218
susewatcher . . . 218
The YaST Online Update module . . . 218
YOU dangers . . . 220
Autoinstallation — AutoYaST . . . 221
Principles . . . 221
Mode of operation . . . 221
The YaST autoinstallation module . . . 223
Using pre-install, chroot, and post-install scripts . . . 226
Further information . . . 227

Part III: Using the Command Line in SUSE Linux 229

Chapter 10: Text Manipulation . . . 231

Reading Lines from Files . . . 231
cat . . . 231
tac . . . 233
zcat . . . 233
head . . . 234
tail . . . 234
expand . . . 234
nl . . . 235
uniq . . . 235
sort . . . 236

Extracting Lines from Files . . . 236
grep . . . 236
zgrep . . . 238
grepmail . . . 239
sgrep . . . 239
split . . . 240
csplit . . . 240
Working with Fields from Text Files . . . 242
cut . . . 242
paste . . . 242
join . . . 243
awk . . . 243
Getting Statistics about Text Files with wc . . . 245
Replacing Text . . . 246
sed . . . 246
tr . . . 247
dos2unix and unix2dos . . . 248
Formatting Text Files for Viewing and Printing . . . 249
pr . . . 249
fold . . . 249
fmt . . . 249
groff -Tascii . . . 249
a2ps . . . 250
enscript . . . 250
Comparing Files . . . 250
cmp . . . 251
diff and patch . . . 251
Getting Text out of Other File Formats . . . 252
antiword . . . 252
ps2ascii . . . 253
ps2pdf . . . 253
dvi2tty . . . 253
detex . . . 253
acroread and xpdf . . . 254
html2text . . . 254
strings . . . 254

Chapter 11: Text Editors . . . 255

The Politics . . . 256
vi/vim . . . 256
Using command mode . . . 258
Moving around the text . . . 258
Deleting text . . . 260
Copying and pasting . . . 263
Inserting and saving files . . . 264
Searching and replacing . . . 264
Using the vim initialization file . . . 265
Exiting vim . . . 265
emacs . . . 266
What to install . . . 266
Starting emacs . . . 267
Controlling emacs . . . 268
Using word completion . . . 270

Using command completion and history . . . 270
emacs modes . . . 271
Using the calendar . . . 273
More information . . . 273

Chapter 12: Working with Packages . . . 275

Binary RPMs . . . 275
Installing an RPM . . . 276
Querying RPM packages . . . 277
Removing installed packages . . . 279
Verifying an RPM . . . 280
Creating an RPM . . . 281
Distribution RPMs . . . 282
Source code . . . 282
The RPM environment . . . 282
The spec file . . . 283
Compiling an RPM from the spec file . . . 288
Checking the finished RPM . . . 290

Chapter 13: Working with Files . . . 293

Listing, Copying, and Moving Files . . . 293
The command-line tools . . . 293
File managers . . . 296
Finding Files . . . 298
Using find . . . 298
Using locate . . . 299
Using Konqueror to find files . . . 299
Finding files in GNOME . . . 300
Finding files in mc . . . 301
Looking at Files and File Types . . . 301
The file command . . . 301
strings, ghex2, khexedit, and antiword . . . 302
Viewing and opening different file types and formats . . . 303
Compressing Files . . . 309
Working with Archives . . . 310
Working with tar archives . . . 310
Working with cpio archives . . . 312
Working with zip archives . . . 312
Unpacking RPM packages . . . 313
Using pax . . . 313
Using ark . . . 314
Files Attributes and ACLs . . . 314
File attributes . . . 314
File ACLs . . . 315

Chapter 14: Working with the System . . . 317

System Rescue and Repair . . . 317
Booting from the hard disk with special boot parameters . . . 317
Booting into the Rescue System . . . 318
Booting into YaST System Repair mode . . . 318
Working with Partitions . . . 321
Partitioning examples . . . 323
Making a filesystem . . . 327

Working with Disk Images . . . 328
Creating ISO images . . . 329
Burning ISO images to CD . . . 329
Working with disk images . . . 330
Webmin . . . 331
Installing Webmin . . . 332
Contacting a running Webmin process . . . 333
Webmin and YaST . . . 334
Automating Tasks . . . 336
Shell aliases . . . 336
Writing shell scripts . . . 337
Scripting languages . . . 344

Chapter 15: Linux Networking . . . 349

Configuring an IP Network . . . 349
ifconfig . . . 349
Setting up your routes . . . 352
Using iproute . . . 355
The Wonderful World of ARP . . . 357
Taking Part in an IPX Network . . . 358
Network Tools . . . 359
Using Telnet . . . 360
Using SSH . . . 362
rsync . . . 365
wget . . . 367
Network Troubleshooting . . . 367
ping . . . 367
traceroute . . . 368
Wireless Networking . . . 369
Bluetooth . . . 371

Part IV: Implementing Network Services in SUSE Linux 375

Chapter 16: Setting Up a Web Site with the Apache Web Server . . . 377

Configuring Apache . . . 379
Global directives . . . 380
Main server . . . 381
Virtual hosts . . . 383
Security . . . 384
Setting up user access . . . 384
Setting up group access . . . 385
The Common Gateway Interface . . . 386
Creating Dynamic Content with PHP . . . 388

Chapter 17: Mail Servers — Postfix, Qpopper, and Cyrus . . . 391

How Mail Is Sent and Received . . . 391
Postfix . . . 392
Postfix configuration . . . 393
Postfix terminology and use . . . 399
Stopping spam . . . 403

Qpopper 404
Fetchmail 406
Cyrus IMAPD 407
Configuring the Cyrus user 407
Adding users to Cyrus 408
Creating a shared mailbox 408
Integrating Cyrus and Postfix 409
Setting an alias for root's mail in Cyrus 410
Choosing a Mail Client 410
The command-line clients 410
The graphical mail clients 411
Mail Systems on Linux 412

Chapter 18: Setting Up Windows Interoperability with Samba. 413

A Bit of Background 413
Setting Up and Using a Samba Client. 414
Configuring a Samba client 415
Browsing available Windows resources 418
Mounting a shared Windows drive 420
Using a Windows printer from Linux 421
Setting Up a Samba Server 426
Creating and Managing the Samba Password File 433
Working with the Winbind Daemon 434
Command-Line Utilities for Samba 435
The Samba Configuration File. 436
Samba Client and Server Packages. 438
Samba-related packages in SUSE 9.1 438
When Samba-related packages are installed. 439
Installing Samba packages without a graphical interface 439
Installing Samba packages 440

Chapter 19: Using DHCP Services 443

Configuring the DHCP Server 444
IP address ranges 444
Assigning a default gateway 444
Configuring name services. 445
Host Specification 446
Defining host groups 447
Specifying Leases. 447
Other DHCP Options 448
The DHCP Client 448
To DHCP or Not? 448

Chapter 20: Configuring a DNS Server 449

Some DNS Theory 449
Top-level domains. 450
How does a DNS search work? 450
Caching. 451
Configuring BIND for Caching and Forwarding 451
Using dig 452
Using host 453

Examining Record Types . . . 454
Working with Zones . . . 454
The Start of Authority . . . 455
The NS entry . . . 456
The Mail Exchanger . . . 456
The Address record . . . 457
The CNAME record . . . 457
Adding the zone to named.conf . . . 457
The Reverse Zone . . . 458

Chapter 21: Working with NFS . . . 461

Mounting NFS Filesystems . . . 461
Mounting NFS filesystems at boot time . . . 461
Using mount options . . . 462
rcnfs start and rcnfs stop . . . 463
YaST's NFS client module . . . 463
The NFS Server . . . 464
The exports file . . . 465
The exportfs command . . . 467
The showmount command . . . 468
Problems with mounting NFS shares . . . 468
Matching up user IDs . . . 469
Security . . . 470

Chapter 22: Running an FTP Server on SUSE . . . 471

vsftpd as an Anonymous FTP Server . . . 472
Setting Up User FTP with vsftpd . . . 476
Allowing Uploads . . . 477
Using pure-ftpd . . . 479
Further Information . . . 479

Chapter 23: Implementing Firewalls in SUSE Linux . . . 481

Why Use a Firewall? . . . 482
Configuring a Firewall with iptables . . . 483
Implementing an iptables firewall . . . 484
Setting your first rules . . . 486
Adding a rule . . . 487
The order of rules . . . 488
Network Address Translation . . . 488
Source NAT . . . 488
Allowing the packets to be forwarded . . . 490
Destination NAT . . . 491
Redirecting Traffic . . . 491
Allowing ICMP Traffic . . . 492
Allowing Loopback . . . 493
Logging Dropped Packets . . . 493
Using SuSEfirewall2 . . . 493
What Next? . . . 499

Chapter 24: Working with LDAP in SUSE 501

What Is LDAP? 501
LDAP objects 502
The hierarchy 503
Implementing the LDAP Server 504
Configuring the administrator 504
Testing the LDAP server 505
Adding information 506
Adding user data to the LDAP server 509
Pluggable Authentication Modules 514
Integrating LDAP into Linux 515
Setting the ACL on the LDAP Server 516
How Can LDAP Help You? 517

Chapter 25: Setting Up a Web Proxy with Squid 519

Getting Started with Squid on SUSE 519
User Authentication 522
Restricting Access by Hardware Address 524
The Squid Log 524
Using Squid as a Transparent Proxy 525
Using Cache Manager 526
Using squidGuard 527

Part V: SUSE Linux in the Enterprise 529

Chapter 26: Enterprise Architecture 531

A Typical Organization 532
Where can Linux be used? 533
I know where, but how? 534
Fulfilling your staff requirements 534
Linux Enterprise Hardware: The Big Players 535
IBM 535
Hewlett-Packard 536
64-bit platforms 537
Blade technology 538
Putting It All Together 538
Where do I put the services? 539
Storage area networks 543
Disaster recovery 547

Chapter 27: The Kernel 551

Why You Probably Don't Need This Chapter 551
Why You Might Need This Chapter 551
SUSE Kernels and "Vanilla" Kernels 552
Kernel version numbers 552
The binary kernel packages 552
What kernel am I running? 553

Upgrading a Kernel Package 554
Kernel Configuration 554
Building the Kernel 559
Rebuilding the km_* Packages 560
The kernel and third-party software 561
Loading kernel modules 562
Kernel Parameters at Boot Time 562
The Initial Ramdisk 563

Chapter 28: The SUSE Linux Standard Server 565

Standard Server Structure 566
Standard Server Installation 566
The Web Administration Interface 572
Users and groups 573
Mail server settings 575
Security settings 577
Network services 577
Tools 579
Monitor 579
File server 580
Language 580

Chapter 29: SUSE Linux OpenExchange Server 581

Licensing SLOX 581
Installing SLOX 582
Starting the SLOX installation 582
Configuring UnitedLinux 585
Configuring SLOX 591
The SLOX Architecture 592
PostgreSQL 593
OpenLDAP 593
Netline servlets 593
Cyrus and Postfix 594
Administrating SLOX 594
Managing Users 596
Creating the user 596
Creating a virtual domain 598
Mapping a virtual user to a real user 600
Configuring the Postfix Subsystem 601
Enabling SMTP-AUTH 601
Enabling spam prevention 602
Managing the Cyrus Subsystem 602
Managing Groups and Folders 603
Creating a group of users 603
Creating a shared folder 604
Checking System Resources 606
The User Perspective 607
Reading your mail 608
The calendar 609
Jobs (tasks) 610

Creating documents 611
Creating a note 613
Creating a new contact 614
Viewing your new Portal page 615
Using the Outlook Connectors 616
iSLOX 616
oSLOX 616
Using oSLOX 617
Your first synchronization 620
To SLOX or Not to SLOX? 623

Appendix A: What's on the DVD 625

Appendix B: About SUSE Linux Professional Version 9.2 627
