

Table of Contents

UNIX Administration—A Comprehensive Sourcebook for Effective Systems and Network Management.....	1
Preface.....	3
Section I: UNIX Administration.....	6
Chapter List.....	6
.....	6
Chapter 1: UNIX — Introductory Notes.....	7
1.1 UNIX Operating System.....	7
1.2 User's View of UNIX.....	9
1.3 The History of UNIX.....	10
1.3.1 Berkeley Standard Distribution — BSD UNIX.....	10
1.3.2 System V or ATT UNIX.....	11
1.4 UNIX System and Network Administration.....	15
1.4.1 System Administrator's Job.....	16
1.4.2 Computing Policies.....	19
1.4.3 Administration Guidelines.....	22
1.4.4 In This Book.....	28
Chapter 2: The Unix Model — Selected Topics.....	30
2.1 Introduction.....	30
2.2 Files.....	30
2.2.1 File Ownership.....	31
2.2.2 File Protection/File Access.....	34
2.2.3 Access Control Lists (ACLs).....	41
2.2.4 File Types.....	45
2.3 Devices and Special Device Files.....	49
2.3.1 Special File Names.....	50
2.3.2 Special File Creation.....	50
2.4 Processes.....	53
2.4.1 Process Parameters.....	53
2.4.2 Process Life Cycles.....	55
2.4.3 Process Handling.....	57
Chapter 3: UNIX Administration Starters.....	65
3.1 Superuser and Users.....	65
3.1.1 Becoming a Superuser.....	65
3.1.2 Communicating with Other Users.....	65
3.1.3 The su Command.....	66
3.2 UNIX Online Documentation.....	67
3.2.1 The man Command.....	67
3.2.2 The whatis Database.....	71
3.3 System Information.....	72
3.3.1 System Status Information.....	72
3.3.2 Hardware Information.....	74
3.4 Personal Documentation.....	78
3.5 Shell Script Programming.....	79
3.5.1 UNIX User Shell.....	80

Table of Contents

Chapter 3: UNIX Administration Starters	
3.5.2 UNIX Shell Scripts.....	80
Chapter 4: System Startup and Shutdown.....	87
4.1 Introductory Notes.....	87
4.2 System Startup.....	88
4.2.1 The Bootstrap Program.....	88
4.2.2 The Kernel Execution.....	89
4.2.3 The Overall System Initialization.....	90
4.2.4 System States.....	91
4.2.5 The Outlook of a Startup Procedure.....	92
4.2.6 Initialization Scripts.....	95
4.3 BSD Initialization.....	95
4.3.1 The BSD rc Scripts.....	95
4.3.2 BSD Initialization Sequence.....	96
4.4 System V Initialization.....	98
4.4.1 The Configuration File /etc/inittab.....	98
4.4.2 System V rc Initialization Scripts.....	101
4.4.3 BSD-Like Initialization.....	105
4.5 Shutdown Procedures.....	106
4.5.1 The BSD shutdown Command.....	107
4.5.2 The System V shutdown Command.....	108
4.5.3 An Example.....	108
Chapter 5: UNIX Filesystem Management.....	109
5.1 Introduction to the UNIX Filesystem.....	109
5.2 UNIX Filesystem Directory Organization.....	110
5.2.1 BSD Filesystem Directory Organization.....	110
5.2.2 System V Filesystem Directory Organization.....	112
5.3 Mounting and Dismounting Filesystems.....	114
5.3.1 Mounting a Filesystem.....	114
5.3.2 Dismounting a Filesystem.....	118
5.3.3 Automatic Filesystem Mounting.....	119
5.3.4 Removable Media Management.....	120
5.4 Filesystem Configuration.....	120
5.4.1 BSD Filesystem Configuration File.....	121
5.4.2 System V Filesystem Configuration File.....	122
5.4.3 AIX Filesystem Configuration File.....	125
5.4.4 The Filesystem Status File.....	127
5.5 A Few Other Filesystem Issues.....	128
5.5.1 Filesystem Types.....	128
5.5.2 Swap Space — Paging and Swapping.....	130
5.5.3 Loopback Virtual Filesystem.....	132
5.6 Managing Filesystem Usage.....	133
5.6.1 Display Filesystem Statistics: The df Command.....	133
5.6.2 Report on Disk Usage: The du Command.....	135
5.6.3 Report on Disk Usage by Users: The quot Command.....	138
5.6.4 Checking Filesystems: The fsck Command.....	138

Table of Contents

Chapter 6: UNIX Filesystem Layout.....	141
6.1 Introduction.....	141
6.2 Physical Filesystem Layout.....	142
6.2.1 Disk Partitions.....	142
6.2.2 Filesystem Structures.....	144
6.2.3 Filesystem Creation.....	147
6.2.4 File Identification and Allocation.....	148
6.2.5 Filesystem Performance Issues.....	152
6.3 Logical Filesystem Layout.....	154
6.3.1 Logical Volume Manager — AIX Flavor.....	154
6.3.2 Logical Volume Manager — HP-UX Flavor.....	158
6.3.3 Logical Volume Manager — Solaris Flavor.....	160
6.3.4 Redundant Array of Inexpensive Disks (RAID).....	163
6.3.5 Snapshot.....	163
6.3.6 Virtual UNIX Filesystem.....	166
6.4 Disk Space Upgrade.....	167
Chapter 7: User Account Management.....	169
7.1 Users and Groups.....	169
7.1.1 Creation of User Accounts.....	169
7.1.2 User Database — File /etc/passwd.....	170
7.1.3 Group Database — File /etc/group.....	172
7.1.4 Creating User Home Directories.....	172
7.1.5 UNIX Login Initialization.....	173
7.2 Maintenance of User Accounts.....	177
7.2.1 Restricted User Accounts.....	178
7.2.2 Users and Secondary Groups.....	178
7.2.3 Assigning User Passwords.....	179
7.2.4 Standard UNIX Users and Groups.....	179
7.2.5 Removing User Accounts.....	180
7.3 Disk Quotas.....	181
7.3.1 Managing Disk Usage by Users.....	181
7.4 Accounting.....	183
7.4.1 BSD Accounting.....	184
7.4.2 System V Accounting.....	185
7.4.3 AIX-Flavored Accounting.....	188
Chapter 8: UNIX System Security.....	189
8.1 UNIX Lines of Defense.....	189
8.1.1 Physical Security.....	189
8.1.2 Passwords.....	190
8.1.3 File Permissions.....	190
8.1.4 Encryption.....	191
8.1.5 Backups.....	191
8.2 Password Issues.....	192
8.2.1 Password Encryption.....	192
8.2.2 Choosing a Password.....	193
8.2.3 Setting Password Restrictions.....	194
8.2.4 A Shadowed Password.....	195
8.3 Secure Console and Terminals.....	198

Table of Contents

Chapter 8: UNIX System Security	
8.3.1 Traditional BSD Approach.....	199
8.3.2 The Wheel Group.....	199
8.3.3 Secure Terminals — Other Approaches.....	199
8.4 Monitoring and Detecting Security Problems.....	201
8.4.1 Important Files for System Security.....	201
8.4.2 Monitoring System Activities.....	203
8.4.3 Monitoring Login Attempts.....	203
Chapter 9: UNIX Logging Subsystem.....	205
9.1 The Concept of System Logging.....	205
9.1.1 The syslogd Daemon.....	206
9.2 System Logging Configuration.....	207
9.2.1 The Configuration File /etc/syslog.conf.....	207
9.2.2 Linux Logging Enhancements.....	211
9.2.3 The logger Command.....	212
9.2.4 Testing System Logging.....	212
9.3 Accounting Log Files.....	214
9.3.1 The last Command.....	215
9.3.2 Limiting the Growth of Log Files.....	215
Chapter 10: UNIX Printing.....	218
10.1 UNIX Printing Subsystem.....	218
10.1.1 BSD Printing Subsystem.....	219
10.1.2 System V Printing Subsystem.....	222
10.2 Printing Subsystem Configuration.....	226
10.2.1 BSD Printer Configuration and the Printer Capability Database.....	226
10.2.2 System V Printer Configuration and the Printer Capability Database.....	234
10.2.3 AIX Printing Facilities.....	236
10.3 Adding New Printers.....	239
10.3.1 Adding a New Local Printer.....	239
10.3.2 Adding a New Remote Printer.....	242
10.4 UNIX Cross-Platform Printer Spooling.....	245
10.4.1 BSD and AIX Cross-Printing.....	245
10.4.2 Solaris and BSD Cross-Printing.....	246
10.4.3 Third-Party Printer Spooling Systems.....	248
Chapter 11: Terminals.....	250
11.1 Terminal Characteristics.....	250
11.1.1 BSD Terminal Subsystem.....	250
11.1.2 System V Terminal Subsystem.....	257
11.1.3 Terminal-Related Special Device Files.....	264
11.1.4 Configuration Data Summary.....	264
11.2 The tset, tput, and stty Commands.....	264
11.2.1 The tset Command.....	265
11.2.2 The tput Command.....	266
11.2.3 The stty Command.....	267
11.3 Pseudo Terminals.....	268
11.4 Terminal Servers.....	270

Table of Contents

Chapter 12: UNIX Backup and Restore.....	272
12.1 Introduction.....	272
12.1.1 Media.....	273
12.2 Tape-Related Commands.....	274
12.2.1 The tar Command.....	274
12.2.2 The cpio Command.....	276
12.2.3 The dd Command.....	277
12.2.4 The mt Command.....	278
12.2.5 Magnetic Tape Devices and Special Device Files.....	279
12.3 Backing Up a UNIX Filesystem.....	280
12.3.1 Planning a Backup Schedule.....	280
12.4 Backup and Dump Commands.....	282
12.4.1 The SVR3 and SVR4 backup Commands.....	282
12.4.2 The fbackup Command.....	284
12.4.3 The dump/ufsdump Command.....	285
12.4.4 A Few Examples.....	288
12.5 Restoring Files from a Backup.....	291
12.5.1 The restore Commands.....	292
12.5.2 The frecover Command.....	295
12.5.3 Restoring Multiple Filesystems Archived on a Single Tape.....	297
12.6 Tape Control.....	298
Chapter 13: Time-Related UNIX Facilities.....	301
13.1 Network Time Distribution.....	301
13.1.1 The NTP Daemon.....	301
13.1.2 The NTP Configuration File.....	302
13.2 Periodic Program Execution.....	307
13.2.1 The UNIX cron Daemon.....	307
13.2.2 The crontab Files.....	309
13.2.3 The crontab Command.....	311
13.2.4 Linux Approach.....	312
13.3 Programs Scheduled for a Specific Time.....	314
13.3.1 The UNIX at Utility.....	315
13.4 Batch Processing.....	317
13.4.1 The UNIX batch Utility.....	317
Section II: Network Administration.....	319
Chapter List.....	319
.....	319
Chapter 14: Network Fundamentals.....	320
14.1 UNIX and Networking.....	320
14.2 Computer Networks.....	320
14.2.1 Local Area Network (LAN).....	321
14.2.2 Wide Area Network (WAN).....	324
14.3 A TCP/IP Overview.....	326
14.3.1 TCP/IP and the Internet.....	326
14.3.2 ISO OSI Reference Model.....	327
14.3.3 TCP/IP Protocol Architecture.....	329
14.4 TCP/IP Layers and Protocols.....	331

Table of Contents

Chapter 14: Network Fundamentals	
14.4.1 Network Access Layer.....	331
14.4.2 Internet Layer and IP Protocol.....	332
14.4.3 Transport Layer and TCP and UDP Protocols.....	333
14.4.4 Application Layer.....	335
Chapter 15: TCP/IP Network.....	338
15.1 Data Delivery.....	338
15.1.1 IP Address Classes.....	338
15.1.2 Internet Routing.....	341
15.1.3 Multiplexing.....	345
15.2 Address Resolution (ARP).....	350
15.2.1 The arp Command.....	351
15.3 Remote Procedure Call (RPC).....	352
15.3.1 The portmapper Daemon.....	354
15.3.2 The /etc/rpc File.....	354
15.4 Configuring the Network Interface.....	355
15.4.1 The ifconfig Command.....	356
15.4.2 The netstat Command.....	357
15.5 Super Internet Server.....	360
15.5.1 The inetd Daemon.....	360
15.5.2 Further Improvements and Development.....	362
Chapter 16: Domain Name System.....	367
16.1 Naming Concepts.....	367
16.1.1 Host Names and Addresses.....	367
16.1.2 Domain Name Service (DNS).....	368
16.1.3 Host Database Files.....	371
16.2 UNIX Name Service — BIND.....	375
16.2.1 BIND Configuration.....	376
16.2.2 Resolvers.....	377
16.2.3 Name Servers.....	380
16.3 Configuring named.....	382
16.3.1 BIND Version 4.X.X.....	383
16.3.2 BIND Version 8.X.X.....	389
16.4 Using nslookup.....	397
16.4.1 The nslookup Interactive Mode.....	398
16.4.2 A Few Examples of nslookup Usage.....	400
Chapter 17: Network Information Service (NIS).....	402
17.1 Purpose and Concepts.....	402
17.2 NIS Paradigm.....	404
17.2.1 yp Processes.....	404
17.2.2 To Create an NIS Server.....	406
17.2.3 To Create an NIS Client.....	409
17.2.4 NIS Domain Name.....	409
17.2.5 Databases/NIS Maps.....	410
17.3 NIS Management.....	413
17.3.1 yp Commands.....	413
17.3.2 Updating NIS Maps.....	415

Table of Contents

Chapter 17: Network Information Service (NIS)	
17.3.3 Troubleshooting.....	418
17.3.4 Security Issues.....	420
17.3.5 A Few NIS Stories.....	421
17.4 NIS vs. DNS.....	423
17.4.1 The /etc/nsswitch.conf File.....	423
17.4.2 Once upon a Time.....	425
Chapter 18: Network File System (NFS).....	426
18.1 NFS Overview.....	426
18.1.1 NFS Daemons.....	426
18.2 Exporting and Mounting Remote Filesystems.....	427
18.2.1 Exporting a Filesystem.....	427
18.2.2 Mounting Remote Filesystems.....	432
18.3 Automounter.....	434
18.3.1 The Automount Maps.....	435
18.4 NFS — Security Issues.....	439
Chapter 19: UNIX Remote Commands.....	440
19.1 UNIX r Commands.....	440
19.1.1 The rlogin Command.....	441
19.1.2 The rcp Command.....	441
19.1.3 The remsh (rsh) Command.....	442
19.2 Securing the UNIX r Commands.....	443
19.2.1 The /etc/hosts.equiv File.....	444
19.2.2 The \$HOME/.rhosts File.....	444
19.2.3 Using UNIX r-Commands — An Example.....	445
19.3 Secure Shell (SSH).....	446
19.3.1 SSH Concept.....	447
19.3.2 SSH Configuration.....	449
19.3.3 SSH Installation and User Access Setup.....	452
19.3.4 SSH — Version 2.....	455
Chapter 20: Electronic Mail.....	458
20.1 E-mail Fundamentals.....	458
20.1.1 Simple Mail Transport Protocol (SMTP).....	461
20.1.2 The MTA Program sendmail.....	464
20.2 Sendmail Configuration.....	470
20.2.1 The sendmail.cf File.....	470
20.2.2 Rulesets and Rewrite Rules.....	478
20.2.3 Creating the sendmail.cf File.....	484
20.3 The Parsing of E-mail Addresses.....	486
20.3.1 Rewriting an E-mail Address.....	486
20.3.2 Pattern Matching.....	486
20.3.3 Address Transformation.....	488
20.4 Testing sendmail Configuration.....	489
20.4.1 Testing Rewrite Rules.....	489
20.4.2 The sendmail -bt Command.....	490
20.4.3 The Debugging Level.....	491
20.4.4 Checking the Mail Queue.....	491

Table of Contents

Chapter 20: Electronic Mail	
20.5 Mail User Agents.....	492
20.5.1 The Mail Program and .mailrc File.....	492
20.5.2 POP and IMAP.....	494
Chapter 21: UNIX Network Support.....	500
21.1 Common UNIX Network Applications.....	500
21.1.1 Telnet.....	500
21.1.2 FTP.....	502
21.1.3 Finger.....	507
21.2 Host Connectivity.....	509
21.2.1 The ping Command.....	509
21.2.2 The traceroute Command.....	511
Section III: Supplemental UNIX Topics.....	513
Chapter List.....	513
.....	513
Chapter 22: X Window System.....	514
22.1 An Introduction to the X Window System.....	514
22.1.1 The Design of X11.....	514
22.1.2 The X Administration Philosophy.....	517
22.1.3 Window Managers.....	518
22.2 The X Display Managers.....	520
22.2.1 xdm/dtlogin Concepts.....	521
22.2.2 xdm Configuration Files.....	524
22.2.3 CDE Configuration Files.....	531
22.2.4 Vendor-Specific X Flavors — a Configuration Example.....	539
22.3 Access Control and Security of X11.....	540
22.3.1 XDMCP Queries.....	540
22.3.2 The Xaccess File.....	541
22.3.3 Other Access Control Mechanisms.....	544
22.4 The User X Environment.....	547
22.4.1 Components of the xdm-Based User X Environment.....	547
22.4.2 Components of the CDE User X Environment.....	549
22.4.3 Window Manager Customizations.....	554
22.4.4 The Shell Environment.....	557
22.5 Miscellaneous.....	563
22.5.1 Other Startup Methods.....	563
22.5.2 A Permanent X11 Installation.....	564
22.5.3 A Few X-Related Commands.....	565
Chapter 23: Kernel Reconfiguration.....	567
23.1 Introduction to Kernel Reconfiguration.....	567
23.2 Kernel Configuration Database.....	567
23.3 BSD-Like Kernel Configuration Approach.....	568
23.3.1 Basic Configuration Entries.....	569
23.3.2 The BSD-Like Kernel Configuration Procedure.....	572
23.3.3 The config Command.....	574
23.4 Other Flavored Kernel Reconfigurations.....	575

Table of Contents

Chapter 23: Kernel Reconfiguration	
23.4.1 HP–UX 10.x Kernel Configuration.....	575
23.4.2 Solaris 2.x Kernel Configuration.....	577
23.4.3 Linux Kernel Configuration.....	583
Chapter 24: Modems and UUCP.....	590
24.1 Introduction to Modems.....	590
24.1.1 UNIX and Modems.....	591
24.2 UNIX Modem Control.....	592
24.2.1 Terminal Lines and Modem Control.....	592
24.2.2 Modem–Related UNIX Commands.....	593
24.3 Third–Party Communication Software.....	595
24.3.1 C–Kermit.....	595
24.4 Introduction to UUCP.....	601
24.4.1 How Does UUCP Work?.....	602
24.4.2 UUCP Versions.....	602
24.4.3 UUCP Chat–Transfer Session.....	603
24.5 UUCP Commands, Daemons, and Related Issues.....	604
24.5.1 The Major UUCP Commands.....	604
24.5.2 The UUCP Daemons.....	607
24.5.3 The UUCP Spool Directories and Files.....	609
24.6 Configuring a UUCP Link.....	611
24.6.1 Serial Line–Related Issues.....	612
24.6.2 UUCP Configuration Files.....	613
24.7 UUCP Access and Security Consideration.....	616
24.7.1 Additional Security in BNU UUCP.....	617
24.7.2 Additional Security in Version 2 UUCP.....	619
Chapter 25: Intranet.....	621
25.1 Introduction to Intranet.....	621
25.1.1 Intranet vs. Internet.....	622
25.1.2 Intranet Design Approach.....	623
25.2 Intranet Front–End Services.....	625
25.2.1 Firewalls.....	625
25.2.2 Viruswalls.....	631
25.2.3 Proxy Servers.....	636
25.2.4 Web Services.....	639
25.2.5 Other External Services.....	644
25.3 Inside the Intranet.....	646
25.3.1 Network Infrastructure and Desktops.....	646
25.3.2 Internal Services.....	647
25.3.3 Virtual Private Network (VPN).....	650
25.3.4 UNIX and Not–UNIX Platform Integration.....	653
Section IV: Case Studies.....	656
Chapter List.....	656
.....	656

Table of Contents

Chapter 26: UNIX Installation.....	657
26.1 Introductory Notes.....	657
26.2 UNIX Installation Procedures.....	657
26.2.1 HP-UX Installation.....	657
26.2.2 Solaris Installation.....	660
26.2.3 Linux Installation.....	667
26.3 Supplemental Installations.....	670
26.3.1 Supplemental System Software.....	671
26.3.2 Patches.....	677
 Chapter 27: Upgrade Disk Space.....	 681
27.1 Adding a Disk.....	681
27.1.1 New Disk on the Solaris Platform.....	681
27.1.2 New Disk on the SunOS Platform.....	683
27.1.3 New Disk on the HP-UX Platform.....	683
27.2 Logical Volume Manager Case Study.....	687
27.2.1 LVM on the HP-UX Platform.....	687
27.2.2 LVM on the Solaris Platform.....	689
 Chapter 28: UNIX Emergency Situations.....	 692
28.1 Introductory Notes.....	692
28.2 Lost Root Password.....	692
28.2.1 Solaris and Lost Root Password.....	692
28.2.2 HP-UX and Lost Root Password.....	693
28.3 Some Special Administrative Situations.....	694
28.3.1 Solaris Procedure to Create an Alternate Boot Partition.....	694
28.3.2 Solaris Recovery of the Failed Mirrored Boot Disk.....	699
28.3.3 HP-UX Support Disk Usage.....	702
28.3.4 HP-UX Procedure to Synchronize a Mirrored Logical Volume.....	704
28.3.5 HP-UX Support Tape and Recovery of Root Disk.....	705
 List of Figures.....	 710
 List of Tables.....	 713
 List of Sidebars.....	 714
