

# Contents

<b>Preface</b> .....	<b>1</b>
About this guide .....	2
Assumptions .....	2
Conventions .....	2
New features for developers.....	3
Online reference material.....	4
Reference materials on the Visio 2000 product CD .....	4
Reference materials on the Visio Web site.....	5
<b>Chapter 1 Introduction to <i>Developing Visio Solutions</i></b> .....	<b>7</b>
About Visio solutions.....	8
Modeling with Visio shapes.....	8
Field sales automation: an example of a Visio solution .....	12
Using Visio shapes to create solutions .....	14
Assembling objects into drawings .....	14
Shapes as components .....	15
Using SmartShapes technology to develop shapes .....	17
Using Automation in a Visio solution .....	19
Automation and Visio objects .....	19
Monitoring events and totaling values: an example .....	20
Planning a Visio solution .....	23
Planning the development process.....	23
Planning shapes and stencils.....	25
Planning templates.....	26
Automating shapes and templates.....	27
Integrating a Visio solution with a database.....	27
Choices for implementing Automation .....	28
<b>Chapter 2 Creating Visio shapes</b> .....	<b>31</b>
Visio shape anatomy .....	32
Closed and open shapes .....	33
1-D and 2-D shapes.....	34
Shape handles .....	34
Shapes in groups.....	36
Drawing new shapes.....	37
Using the drawing tools to create shapes.....	37
Drawing closed shapes .....	39
Drawing shapes with repeated elements .....	39
Creating groups .....	39
Merging shapes to create new ones .....	40

Importing shapes from other programs .....	42
Importing graphic images .....	42
Editing imported metafiles and bitmaps .....	43
Converting imported metafiles to shapes .....	43
Converting CAD symbol libraries to shapes .....	44
Adapting existing Visio shapes .....	45
Revising existing shapes .....	45
Revising existing groups .....	46
<b>Chapter 3 Visio masters, stencils, templates, and documents .....</b>	<b>49</b>
Creating masters and stencils .....	50
Creating a stencil .....	51
Creating masters on stencils .....	52
Editing masters on stencils .....	53
Creating templates .....	54
Creating a template .....	54
About pages, backgrounds, and layers .....	56
Opening and saving Visio documents .....	58
Components of a Visio document .....	58
Opening a Visio file .....	59
Choosing the right file type for your solution .....	60
<b>Chapter 4 Visio formulas .....</b>	<b>61</b>
The ShapeSheet window .....	62
Displaying a ShapeSheet window .....	62
Displaying sections in a ShapeSheet window .....	64
ShapeSheet sections and what they control .....	65
Examining a shape in a ShapeSheet window .....	68
Elements of Visio formulas .....	70
Entering and editing formulas in a ShapeSheet window .....	70
Functions and operators in Visio formulas .....	71
ShapeSheet cell references .....	72
Rules for cell references in formulas .....	74
Units of measure in Visio formulas .....	75
Multidimensional units .....	76
Specifying units of measure .....	77
Designing Visio formulas .....	77
How shapes inherit formulas .....	77
User-defined cells and “scratch” formulas .....	78
Protecting formulas .....	80
Controlling recalculation of formulas .....	81
When to supplement Visio formulas with Automation .....	82
<b>Chapter 5 Controlling shape geometry with formulas .....</b>	<b>83</b>
Shape geometry .....	84
Describing shapes in a coordinate system .....	85
Representing shape geometry with formulas .....	86
Representing a shape’s position on a page .....	88
Preventing users from moving a shape .....	90

	Controlling how shapes stretch and shrink .....	90
	Height-based formulas: an example.....	91
	Optimizing the arrow example.....	93
	Controlling how shapes flip and rotate .....	94
	How flipping affects a shape .....	94
	How rotating affects a shape.....	95
	Designing shapes that flip and rotate .....	96
	Preventing shapes from flipping and rotating .....	98
	Controlling curves in shapes.....	99
	Using rounded corner styles .....	100
	Understanding arcs .....	100
	Converting line and arc segments .....	104
	Useful arc formulas .....	104
	Optimizing shape geometry.....	106
	Using locks to limit shape behavior.....	107
<b>Chapter 6</b>	<b>Grouping and merging shapes.....</b>	<b>109</b>
	Groups versus merged shapes.....	110
	Creating and controlling groups .....	111
	Grouping and ungrouping shapes.....	111
	Modifying a group.....	112
	How grouping shapes affects their formulas .....	112
	Controlling the behavior of groups .....	114
	Controlling how groups are selected.....	114
	Defining the resizing behavior of grouped shapes .....	115
	Resizing shapes in only one direction .....	116
	Creating a 3-D box: an example .....	118
	Protecting the formatting of shapes in groups .....	121
	Creating and controlling merged shapes.....	121
	Merging shapes .....	122
	Filling merged shapes.....	123
	Hiding shape geometry .....	124
<b>Chapter 7</b>	<b>Enhancing shape behavior .....</b>	<b>125</b>
	Making shapes flexible with control handles .....	126
	Adding a Controls section to a shape.....	126
	Defining a control handle.....	127
	Setting a control handle's anchor point.....	129
	Setting a control handle's behavior .....	130
	Shortcut menu commands.....	132
	Defining a shortcut menu command.....	132
	Controlling a shortcut command's appearance on the menu .....	134
	Checking commands on the shortcut menu .....	134
	Dimming a shortcut command on the menu.....	135
	Hiding and showing commands on the shortcut menu .....	136
	Using shortcut commands to change shape geometry: an example .....	137
	How the formulas work .....	138

Custom properties .....	139
Using custom properties .....	139
Defining custom properties .....	141
Adding custom properties to a master .....	144
Linking custom properties to a database .....	144
Event formulas .....	145
Using cells in the Events section .....	145
Simulating events with the DEPENDSON function .....	146
Functions that perform actions .....	147
Performance considerations for event formulas.....	148
<b>Chapter 8 1-D shapes, connectors, and glue .....</b>	<b>149</b>
Understanding 1-D and 2-D shapes .....	150
Converting 1-D and 2-D shapes .....	151
1-D shape gallery .....	152
Creating routable and other 1-D connectors .....	153
Creating routable connectors .....	153
Creating other 1-D connectors.....	155
Creating an angled connector.....	155
Creating a height-based 1-D shape.....	157
Controlling how shapes connect.....	160
Defining a connector's glue behavior.....	161
Specifying what can be glued .....	162
Understanding connection points.....	163
Adding connection points to a shape .....	166
Naming connection points .....	168
Designing shapes for the dynamic connector .....	168
<b>Chapter 9 Designing text behavior .....</b>	<b>171</b>
About text in shapes and masters .....	172
Viewing text attributes in the ShapeSheet window .....	173
Controlling the text block's position .....	174
Adding control handles that control a text block.....	174
How text control handles appear in the ShapeSheet window.....	175
Controlling text in a group .....	176
Resizing shapes with text.....	176
Controlling text block size .....	177
Controlling text block width.....	177
Controlling text block height.....	178
Basing shape size on the amount of text .....	178
Basing shape size on text value .....	179
Changing the font size as a shape is resized .....	180
Using the SmartShape Wizard to create text resizing formulas.....	180
Writing custom resizing formulas.....	181

Controlling text rotation.....	181
Using the SmartShape Wizard to control text rotation .....	182
Gravity formulas.....	183
Counter-rotation formulas for level text .....	183
Constraining text block size: examples .....	184
Constraining the width of a level text block .....	184
Controlling the width of an offset level text block .....	186
Working with text formulas.....	188
Displaying and formatting formula results.....	188
Displaying a shape's width in different units.....	188
Displaying normalized angular values .....	189
Formatting strings and text output .....	190
Using the format function .....	190
Displaying formatted custom properties .....	191
Protecting text formulas .....	192
Testing text block formulas .....	193
<b>Chapter 10 Managing styles, formats, and colors .....</b>	<b>195</b>
Working with styles in the drawing page .....	196
Understanding styles.....	196
Setting default styles for a drawing.....	197
Creating a new style .....	197
Editing a style.....	199
Guidelines for applying styles to shapes.....	199
Reformatting shapes on the drawing page.....	200
Reformatting masters in a stand-alone stencil .....	200
Reformatting all instances of a master .....	202
Using styles in stencils and templates.....	203
Keeping styles consistent across files.....	203
Using naming conventions for styles .....	204
Guidelines for defining styles .....	204
Protecting local shape formats.....	205
Using the Preserve Local Formatting option .....	205
Using the LockFormat cell and the GUARD function.....	205
Managing color in styles, shapes, and files.....	206
Editing the color palette.....	206
Standardizing color palettes across documents.....	206
Using a formula to define a custom color.....	207
Custom patterns .....	208
Creating a custom pattern .....	209
Developing custom fill patterns .....	211
Fill pattern colors .....	211
Designing tiled patterns .....	212
Developing custom line patterns.....	212
Developing custom line ends.....	215
<b>Chapter 11 Arranging shapes in drawings .....</b>	<b>217</b>
Assigning shapes and masters to layers .....	218
Using layers efficiently .....	218
Assigning masters to layers .....	219

Designing a grid .....	221
Setting the grid for a template's drawing page .....	221
Creating masters that work with a grid .....	221
Using formulas to hold grid information .....	223
Aligning shapes to guides and guide points .....	224
Guidelines for using guides or grids .....	225
Manipulating guides and guide points .....	225
Guides in a rotated page .....	226
Grouping guides with shapes .....	227
Using alignment boxes to snap shapes to a grid .....	227
Adjusting the size of a shape's alignment box .....	228
Updating an alignment box .....	230
Changing the alignment box for 1-D shapes .....	230
Designing shapes for automatic layout .....	231
Setting layout options for the page .....	231
Setting shape and connector behavior .....	232
<b>Chapter 12 Scaled shapes and measured drawings .....</b>	<b>235</b>
Choosing an appropriate drawing scale .....	236
Understanding drawing scale and page scale .....	237
Factors to consider in choosing a drawing scale .....	237
Choosing a scale for masters .....	239
Determining an appropriate scale for a master .....	239
Setting the scale of a master .....	241
Creating shapes that never scale .....	242
<b>Chapter 13 Packaging stencils and templates .....</b>	<b>243</b>
Designing custom shapes for distribution .....	244
Shape design process guidelines .....	244
Shape distribution considerations .....	245
Testing masters .....	246
Checking the consistency of masters .....	246
Checking the master in the master drawing window .....	247
Testing masters with different page scales .....	247
Adding Help to masters .....	249
Associating Help with a master .....	249
Testing shape Help .....	251
Finishing and testing a stencil .....	251
Creating master shortcuts .....	251
Cleaning up masters in a stencil .....	252
Cleaning up a stencil file .....	254
Testing stencils .....	255
Finishing and testing a template .....	256
Cleaning up a template .....	256
Testing a template .....	257
Installing stencils and templates .....	259
Moving template files .....	260
Protecting stencils and templates .....	260

<b>Chapter 14</b>	<b>Automation and the Visio object model</b> .....	<b>261</b>
	An Automation overview.....	262
	The Visio object model.....	262
	Getting and releasing Visio objects.....	265
	Declaring object variables.....	265
	Accessing Visio objects through properties.....	266
	Referring to an object in a collection.....	266
	Iterating through a collection.....	267
	Releasing an object.....	268
	Using compound object references.....	269
	Restricting the scope and lifetime of object variables.....	270
	Using properties and methods.....	270
	Declaring variables for return values and arguments.....	270
	Getting and setting properties.....	271
	Using an object's default property.....	272
	Using methods.....	272
<b>Chapter 15</b>	<b>Microsoft VBA programming in the Visio application</b> .....	<b>273</b>
	Using the Visual Basic Editor.....	274
	Starting the Visual Basic Editor.....	275
	Navigating among projects.....	276
	Saving a project.....	276
	Creating a VBA project.....	278
	Inserting modules and class modules into your project.....	279
	Inserting user forms into your project.....	281
	Importing files into and exporting files from your project.....	282
	Using the Visio type library.....	282
	Using the Object Browser.....	283
	Setting references to type libraries.....	284
	Using Visio object types.....	285
	Using the global and ThisDocument objects.....	286
	Using the Visio global object.....	286
	Using the ThisDocument object.....	288
	Running VBA code from the Visio application.....	289
	Handling errors.....	292
	Running the program in the right context.....	292
	Verifying that objects and return values exist.....	293
	Checking for error values.....	293
	Managing a VBA project.....	294
	Removing project items.....	294
	Protecting your code.....	295
	Using the Add-in Manager.....	295

<b>Chapter 16</b>	<b>Working with Visio Document, Page, and Shape objects</b> .....	<b>297</b>
	Working with Document objects.....	298
	Getting a Document object.....	298
	Getting information about documents.....	299
	Working with styles in a document.....	300
	Creating a style for a document.....	301
	Printing and saving documents.....	301
	Working with Page objects.....	303
	Getting a Page object.....	303
	Getting information about pages.....	304
	Adding pages to a drawing.....	304
	Working with Shape objects.....	305
	Getting a shape object.....	305
	Getting information about a shape.....	307
	Creating and changing shapes.....	309
	Adding text to shapes.....	311
	Getting a shape's text.....	312
	Identifying and applying styles to shapes.....	312
	Preserving local formatting.....	313
	Creating groups from a program.....	314
	Creating masters.....	315
	Creating a simple drawing: an example.....	316
<b>Chapter 17</b>	<b>Automating formulas</b> .....	<b>319</b>
	Working with formulas in cells.....	320
	Getting a Cell object.....	320
	Changing cell formulas using the Formula property.....	322
	Getting the result of a formula.....	323
	Replacing a formula with a result.....	324
	Overriding guarded formulas.....	324
	Using formulas to move shapes: an example.....	325
	Working with sections and rows.....	326
	Adding sections and rows.....	326
	Adding a Geometry section to a shape: an example.....	328
	Deleting sections and rows.....	330
	Changing the type of a segment.....	331
	Iterating through a collection of sections and rows: an example.....	332
	Working with inherited data.....	333
<b>Chapter 18</b>	<b>Drawing with Automation</b> .....	<b>335</b>
	Automating drawing with masters.....	336
	Getting the stencil.....	336
	Getting the master.....	337
	Dropping the master on the page.....	337
	Placing shapes in a drawing.....	339

Working with selected shapes .....	341
Getting shapes that are selected in a window .....	341
Adding and removing shapes in selections .....	343
Selecting and deselecting shapes in a window .....	343
Performing operations on selected shapes.....	344
Determining a selection's scope .....	344
Background pages.....	345
Creating and assigning background pages.....	345
Iterating through the Pages collection: an example .....	346
Setting up pages and backgrounds: an example .....	346
Changing page settings .....	348
Layers .....	349
Identifying layers in a page or master .....	349
Identifying the layers to which a shape is assigned.....	350
Assigning shapes to and removing shapes from layers .....	350
Adding layers to and deleting layers from pages and masters .....	351
Changing layer settings .....	351
<b>Chapter 19 Automating connections in a Visio solution .....</b>	<b>353</b>
Working with a Connect object.....	354
Getting information from a connected drawing .....	356
Determining which shapes are connected .....	356
Determining which parts of shapes are connected.....	357
Getting the cells in a connection .....	358
Guidelines for analyzing a connected drawing.....	359
Iterating through the connections on a page: an example .....	360
Creating a connected drawing from a program.....	362
What can be glued to what .....	363
Gluing with Cell objects.....	365
Gluing a shape to another shape .....	365
Connecting shapes in a flowchart: an example.....	367
<b>Chapter 20 Integrating data with a Visio solution.....</b>	<b>369</b>
Associating data with shapes using Automation .....	370
Adding custom property and user-defined rows.....	370
Generating and using unique IDs .....	371
Visio properties for storing and retrieving data.....	373
Writing code to extract data from a Visio drawing.....	374
Extracting data from a drawing: an example.....	374
Examining the code for extracting data from a drawing .....	377
Writing code to create a Visio drawing from data.....	378
Creating a drawing from data: an example.....	379
Examining the code for creating a drawing from data.....	382
Integrating a Visio solution with a database.....	383

<b>Chapter 21</b>	<b>Handling Visio events .....</b>	<b>385</b>
	An event overview.....	386
	Writing code behind events .....	387
	Handling events fired by ThisDocument .....	388
	Declaring an object variable using the WithEvents keyword.....	390
	Defining a class to receive events.....	391
	Class module that responds to events: an example .....	394
	Visio Event objects.....	395
	Defining your Event object .....	395
	Getting information about an Event object .....	397
	Creating an Event object that runs an add-on .....	397
	Persistence of an Event object that runs an add-on .....	398
	Creating an Event object that sends a notification .....	399
	The VisEventProc procedure: an example.....	403
	Event objects that send notifications: an example.....	404
	Lifetime of an Event object that sends a notification .....	405
<b>Chapter 22</b>	<b>Customizing the Visio user interface .....</b>	<b>407</b>
	What you can customize .....	408
	Getting a UIObject object .....	409
	About menu objects .....	410
	About accelerator objects.....	412
	About toolbar objects .....	412
	About status bar objects .....	414
	Planning user interface changes.....	415
	Customizing a copy of the built-in Visio UI versus an existing custom UI.....	415
	Controlling the scope of your UI.....	416
	Controlling the persistence of your UI.....	417
	Making user interface changes .....	418
	Getting a MenuSet, ToolbarSet, AccelTable, or StatusBar object.....	418
	ID constants for window contexts.....	419
	Adding a menu and a menu item .....	420
	Adding a toolbar and a toolbar button .....	423
	Setting properties of an item.....	426
	Removing items from a user interface .....	427
	Removing a toolbar item.....	429
	Removing an accelerator.....	430
	Putting custom UI changes into effect .....	431
	Using custom user interface files .....	432
	About Custom.vsu.....	432
	Saving a custom user interface file.....	432
	Loading a custom user interface file.....	433
	Restoring the built-in Visio user interface .....	434

<b>Chapter 23</b>	<b>Using ActiveX controls in a Visio solution.....</b>	<b>435</b>
	Adding ActiveX controls to a Visio solution .....	436
	Working in design mode .....	436
	Inserting a control in a drawing .....	436
	Setting the tabbing order of controls .....	438
	Using the Visio ambient properties in controls.....	438
	Printing a drawing without its controls .....	439
	Protecting controls from changes .....	439
	Handling a control's events .....	439
	Working with controls at run time.....	440
	About control names .....	440
	Getting a control from the OLEObjects collection .....	441
	Distributing ActiveX controls in a Visio solution .....	442
	ActiveX controls that interact with shapes: an example.....	443
<b>Chapter 24</b>	<b>Using the Visio Undo manager in your program.....</b>	<b>447</b>
	The Visio Undo manager .....	448
	An Undo/Redo overview .....	448
	How the Visio Undo manager works with an add-on .....	449
	Creating undo scopes in your add-on .....	450
	Creating an undo scope .....	450
	Associating events with an undo scope.....	451
	Creating undo units .....	452
	Creating an undo unit.....	452
	Adding an undo unit in the Visio Undo manager .....	454
	Creating an undo unit that maintains non-Visio data: an example.....	454
<b>Chapter 25</b>	<b>Packaging a Visio Automation solution.....</b>	<b>459</b>
	Installing a Visio solution .....	460
	Specifying Visio file paths and folders .....	460
	How the Visio application searches file paths .....	461
	Controlling when your program runs.....	462
	Distributing your program .....	465
	Distributing Microsoft VBA programs .....	465
	Drawing file size in a Microsoft VBA solution .....	466
	Using universal names in your solution .....	467
	Important licensing information.....	467
<b>Chapter 26</b>	<b>Programming the Visio application with Microsoft Visual Basic .....</b>	<b>469</b>
	Getting a Visio instance.....	470
	Creating an Application object.....	470
	Getting an Application object.....	471
	Releasing an Application object .....	471
	Using the Application object in a Microsoft Visual Basic program: an example .....	471
	Shortcuts for getting a Visio instance.....	473
	Working with an instance's window handle.....	474
	Interacting with other programs .....	474
	Creating a Visio document .....	475
	Handling errors in Microsoft Visual Basic.....	476

	Interpreting the command string the Visio application sends to your program .....	477
	Running the program from the Macros submenu .....	477
	Running the program when a formula is evaluated .....	477
	Running the program with arguments.....	479
	Running the program from the Startup folder .....	479
	Parsing a command string .....	479
	Using the Visio type library in Microsoft Visual Basic projects .....	480
	Migrating from Microsoft Visual Basic to VBA.....	481
<b>Chapter 27</b>	<b>Programming the Visio application with C++ .....</b>	<b>483</b>
	How the Visio application exposes objects .....	484
	C++ support in the Visio product.....	485
	Using the wrapper classes.....	486
	The interfaces behind the wrappers.....	488
	Obtaining a Visio Application object.....	490
	Values returned by Visio methods .....	490
	Arguments passed to Visio methods .....	492
	Handling Visio events in C++ programs .....	494
	Implementing a sink object.....	494
	Using CVisioAddonSink .....	495
	Visio libraries .....	497
	Advantages of Visio libraries.....	497
	The architecture of a Visio library.....	498
	Declaring and registering add-ons .....	499
	Running an add-on .....	501
<b>Appendix A</b>	<b>Properties, methods, and events by object.....</b>	<b>505</b>
<b>Appendix B</b>	<b>ShapeSheet section, row, and cell indexes.....</b>	<b>521</b>
	Section, row, and cell indexes for shapes.....	522
	Section, row, and cell indexes for styles.....	527
	Section, row, and cell indexes for pages .....	527
	Section, row, and cell indexes for documents.....	529
	Tab cells and row types.....	529
	<b>Glossary.....</b>	<b>531</b>
	<b>Index.....</b>	<b>545</b>
