For more information on the products on this page, visit our home page at http://www.ss8.com

SMserverTM

Short Message Service Center (SMSC) for GSM and IS41 wireless networks.

OTAserverTM

Over-the-Air Service Provisioning (OTASP) for CDMA and TDMA wireless networks.

CALEAserverTM

SS8 offers the solution that allows carriers to meet Communications Assistance for Law Enforcement Act (CALEA) requirements today.

Signaling Gateway

There are a lot of gateways. But SS8's distributed environment and high performance make for a stand-out in the field.

Distributed7TM

SS8's latest generation of SS7 development platforms is designed for high availability carrier applications. The clustered multi-host architecture enables SS7 to run on multiple computers simultaneously under a single SS7 point code. Distributed7 takes SS7 reliability beyond fault tolerant platforms.

Connect7TM

Host independent controller board embedded with full Signaling System No.7 (SS7) functionality.

Easy7TM

The ideal link concentration solution for smaller networks. This mini-STP can be in the same room with multiple SS7 signaling points with the result that fewer SS7 links can handle your network traffic. For some, the pay-back can be astonishingly short.
